ENERGY

Since its inception in 1938, Kennametal has understood precisely how to improve manufacturing performance and profitability — by introducing unparalleled products and services to reduce operating costs and lead times.

These 2000+ pages bring you the latest in milling, holemaking, turning, and tooling systems products and superior services — all specifically engineered to enhance overall productivity, even in the most challenging metalworking applications. Rely on Kennametal to significantly boost manufacturing competitiveness. To learn more, contact your Kennametal Representative or Authorized Kennametal Distributor.

Less Environmental Impact

To learn more about our sustainable solutions for your industry,
please contact your Kennametal Representative or
Authorized Kennametal Distributor, or visit www.kennametal.com.

Environment

Kennametal's intimate understanding of the energy marketplace — including customer processes and applications — allows us to proactively address production and sustainability concerns with solutions tailored to your needs. We deliver superior value because we listen closely to you, our customer, and innovate based on your feedback. Our goal is to help you be more competitive — both at home and on a global scale.

Best Practices in Productivity

As your trusted partner for optimized production, Kennametal offers customers a unique commitment to research and development excellence, continually delivering highly innovative ways to enhance productivity. Certification to ISO 9001, QS 9000 TES, and VDA 6.4 provides the highest possible quality standards.

Best Performance, Less Environmental impact

With technology, we can do both. Kennametal helps customers focus on the root causes of unsustainable behavior in highly complex manufacturing systems, while at the same time improving cost structure, quality, and performance. In addition to offering the latest in metalcutting tools and technology, our Advanced Engineering team will analyze your existing production processes and help identify new methods to improve your overall performance.

Turning

Product Highlights

Superhard Materials • PCBN and PCD

Abrasion resistance and toughness are the two most important properties in assessing the efficiency of cutting tool materials. Abrasion resistance is primarily a function of hardness, and, in this respect, diamond (PCD) and cubic boron nitride (CBN) are superior to all other known materials.

For more information, see pages B132–B197.

Beyond BLAST™

An entirely different approach to machining high-temperature alloys. We determined that the most effective way to deliver coolant would be to channel it through the insert — ensuring that it hits exactly where it does the most good. That means, more efficient coolant delivery at a fraction of the cost of high-pressure coolant systems. By precisely controlling coolant application, Beyond BLAST enables you to lower your energy consumption, saving you even more money and reducing your impact on the environment.

For more information, see pages F2–F12.

beyond™ BLAST™

Beyond™ PVD Grades

Advanced PVD coatings using Beyond technology are well suited to resist the high temperatures associated with machining tough alloys. By offering increased tool life (by 30–40%), the general engineering, transportation, aerospace, energy, and earthworks markets can experience benefits in their profitability. They can also realize benefits by utilizing the strength of the new PVD coating in combination with the broad product offering to perform turning, grooving, and cut-off operations in a wide array of materials and applications while maintaining consistent chip control and minimizing insert edge wear.

For more information, see pages B2–B115.

beyond

Grooving and Cut-Off : -CL and -GUP Geometries

The A2™ CL geometry maximizes your cut-off productivity. The A2-CL geometry offers tighter chipbreaker capabilities when machining low-carbon steel, excellent chip evacuation in low-feed applications, and improved stability and rigidity. The A4-GUP geometry, available in molded and precision-ground styles, provides a positive rake angle, enhanced chip control, and lower cutting forces. The -GUP geometry offers up to 180% longer tool life and higher productivity in steel, stainless steel, and high-temperature alloy materials.

For more information, see pages A2-CL: D14
A4-GUP: D78, D82.

Kennametal Select

Kennametal Select products make it simple to get the most out of your inserts — and your money. Every insert is gold, which exposes wear as the tool continues to be used. This makes it easy to detect when an insert is ready to be changed — maximizing the product's value and protecting the workpiece. Also, because Kennametal Select inserts can be used in most applications, a single insert can take on any number of tasks, thus reducing your inventory. Kennametal Select products are also reliable enough to cut steel, stainless steel, cast iron, and high-temperature alloys, enabling quick changes in workpiece materials without the need to swap inserts, saving time and money.

For more information, see pages F110–F134.

KENNAMETAL
SELECT

Holemaking

Product Highlights

Hole Finishing with Kennametal

Only Kennametal is capable of offering you the best, customized solution for your application. Kennametal owns the entire process chain, from raw material, insert pressing, tool body design, brazing, sintering, grinding, coating, and so on, up to reconditioning. Kennametal is the only source in the metalworking industry from where you can get all types of hole finishing tooling, from reaming and fine boring to motion tooling, directly from one hand. Therefore, Kennametal can offer you the best-fitting solution for your machining challenge, giving you the choice of tooling without any limitations in regard to portfolio or capability.

For more information, see pages K1–K211.

Drill Fix™ DFS™

Drill Fix DFS combines the economical squared-outboard insert with the superior centering capabilities of the trigon inboard insert. The DFS indexable drills offer increased metal removal rates combined with high surface quality and hole straightness.

For more information, see pages J19–J35.

GOdrill™ • Kennametal's First Microdrill

The all new GOdrill addresses drilling operations in a diameter range of .0394–.5" (1–12,7mm) in a broad variety of materials and applications, such as fuel systems or medical components. Due to its very unique design, the GOdrill expands the advantages of modular drills into the small diameter range: high-end grades, wear-indicator coating, and new, patented geometries enable full utilization of the drill's tool life capacity.

For more information, see pages G5–G15.

HP Beyond™ Drills for Steel and Stainless Steel

HP Beyond Series Solid Carbide Drills are designed specifically for stainless steel and steel applications, offering high performance and long tool life in regular steel, titanium, and iron materials. By combining unique Kennametal technologies, such as the HP point, flute geometry, and a new Beyond grade technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

For more information, see pages G25–G43.

KSEM PLUS™ Modular Drill System

The KSEM PLUS drill concept is simple but effective. It combines the benefits of the KSEM™ modular drill (high feeds and length-to-diameter [L/D] ratios) with the benefits of an indexable drill (high speeds and low consumable costs).

For more information, see pages H46–H59.

Beyond™ High-Performance Solid Carbide Taps

Solid carbide taps offer higher productivity and outstanding performance in a wider range of materials than formerly possible. Get more production from a single tool and superior accuracy of product thread that surpasses the competition. Kennametal High-Performance Solid Carbide Taps are available in various specifications with enhanced precision and design, which translates into longer tool life, excellent performance, and exceptional wear resistance.

For more information, see pages L2–L33.

Solid End Milling

Product Highlights

HARVI™ High-Performance End Mills for Roughing and Finishing with One Tool

HARVI takes high-performance roughing, semi-finishing, slotting, and profiling to the next level. The line is designed to provide maximum metal removal rates by achieving supreme surface conditions. A wide range of diameters and corner radii are available from stock.

For more information, see pages M8–M30.

KenFeed™ End Mills for High-Feed Milling

A unique tool with new, 6-flute style for high productivity, the KenFeed end mill is specifically engineered to machine hardened steel up to 67 HRC at extreme speeds and feeds. Necked shanks provide extended reach in deep cavities and high feed rates up to .0230" per tooth on a 3/4" tool. Machine hardened materials at 2–3x the metal removal rate of competitive end mills. Wide range of cutting diameters, down to 6mm for small- and medium-pocket work. Innovative new geometry maximizes metal removal rates and lowers manufacturing costs.

For more information, see pages M31–M34.

KCN05™ Diamond Coated Carbide Routers

Kennametal has the correct milling solutions engineered for machining difficult CFRP (Carbon-Fiber Reinforced Polymer) and non-ferrous components. KCN05 solid carbide router products provide excellent tool life and produce smooth finishes with improved edge quality. The unique geometries are free cutting, reduce heat generation, and provide high-quality machined surfaces.

For more information, see pages M62–M68.

GOmill™ • The Economical Milling Cutter Line

The GOmill line is specifically engineered to work on short length-of-cut applications in multiple workpiece materials, like soft and hard steels up to 48 HRC, stainless steels, high-temperature alloys, and cast iron. With the very short overall length and soft cutting geometries, the line is made to conform to the growing market of mill-turn machines. The 3-flute sharp and 4-flute chamfer versions support roughing, semi-finishing, and finishing applications; the 3-flute ball nose tool supports roughing and semi-finishing applications; and the 2-flute ball nose version supports finishing applications. All three geometries work in slotting as well as side milling applications up to 1 x D depth of cut.

For more information, see pages M85, M87, M92, M95.

MaxiMet™ Carbide End Mills for High Metal Removal Rates and Superior Surface Finishes

Designed to significantly reduce machining time in aluminum! The innovative geometry designs include a wiper facet for superior surface finish on aluminum parts. MaxiMet takes roughing and finishing cuts with one tool. Slotting is effective up to full 1 x D axial depth. Side milling is effective up to 0.5 x D radial and 1.5 x D axial depth. The 3-flute series uses unequal flute spacing for chatter-free performance. Effective in a full range of machine speeds. Multiple corner radii and extended neck configurations are available as standard.

For more information, see pages M41–M61.

Indexable Milling

Product Highlights

Dodeka™ Series • Leader in Advanced Face Milling Applications

Dodeka Mini and Dodeka MAX™ are the most comprehensive face milling boosters on the market today. Twelve true cutting edges per insert mean low cost per edge and high productivity. With Beyond™ premium milling grades, you will see up to 30% higher Metal Removal Rates (MRR), 25% lower cutting forces due to real soft cutting action, and up to 35% better tool life in light to heavy machining.

For more information, see pages O2–O26.

MEGA Series • Superior Heavy-Duty Milling

With four true cutting edges per heavy-duty MEGA insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA inserts for all of your steel and cast iron indexable milling needs.

For more information, see pages O28–O43.

Beyond BLAST™ • More Than Just the Right Tool — The Ultimate Solution

The Beyond BLAST KSSM™ 45° and KSRM™ platforms utilize Precision Coolant Technology (PCT) to aggressively apply coolant directly to the cutting area. Not only does this reduce heat at the cutting edge, but it also assists with reducing tool and chip friction, increasing chip evacuation, and relieving shear stress.

For more information, see pages O44–O48, R60–R69.

Rodeka™ • The New Round Insert Generation

Kennametal introduces a new and revolutionary double-sided round milling insert capable to run in multiple types of milling operations and workpiece materials, providing the latest double-sided insert technology to boost your productivity with the most efficient cost per edge.

For more information, see pages R12–R19.

Mill 1™ • High-Performance Shoulder Milling Platform

The multifunctional Mill 1 platform works with all tool materials in shoulder, ramp, slot, plunge, and helical milling with one insert style to improve productivity and reduce inventory and machining costs. The super positive cutting rake, soft cutting action, and low cutting forces enable higher feed rates and spindle protection. Innovative insert and cutter body designs offer improved ramping capabilities.

For more information, see pages P2–P64.

Tooling Systems

Product Highlights

New Catalog

New Comprehensive Tooling Systems Catalog

Kennametal is proud to present the latest Kennametal Tooling Systems catalog with innovative products on more than 1,100 pages! In this catalog, you will find information about KM Micro™, KM Mini™, KM™ Quick Change, KM4X™, HSK shank tools, BTKV and CVKV shank tools, BT shank tools, CV shank tools, DV shank tools, QC and R8 shank tools, straight shanks, collets and sleeves, and thermo shrinking machines.

To view the PDF, please go to www.kennametal.com

KM4X™ • The New Choice for Heavy-Duty Milling

KM4X is the latest version of the KM™ spindle interface targeted at heavy-duty machining operations and is a top choice for machining large, structural, tough-to-machine materials, like titanium, for the aerospace industry. The portfolio consists of rotating adapters and static tooling to support the tough and heavy machining markets. Additional products include spindle component packages as well as static clamping units to support turning and mill-turn opportunities.

KM™ Quick Change

KM Quick Change Tooling is a central component in achieving dramatic improvement in machine and cutting tool use. It's the choice of manufacturers requiring maximum machine output. The necessary tasks of changing, setting up, and gaging tools create an excess of machine downtime. For small batch manufacturing operations requiring these frequent setups, KM Quick Change Tooling is the most efficient method for reducing lost time and improving the overall quality of the machining process by generating greater productivity and increasing profits.

HSK Shank Tools

ERICKSON™ HSK Face Contact short taper tooling is manufactured from premium materials and to the latest DIN/ISO specification standards. Form A versions are generally used in machining centers and milling machines with automatic tool changers.

Engineered Solutions

Coordinated global resources with world-class manufacturing process development and implementation capabilities.

Whether it's a single tailored tool required to address a specific part feature or the development of a comprehensive manufacturing process for use on existing or newly acquired production equipment, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Global implies just that. Globally coordinated manufacturing process development, implementation, and optimization support at machine tool builders, end user engineering or corporate offices, and end user production facilities, regardless of their respective geographies. Well-organized, highly linked staff reside in the Americas, Europe, and Asia/Pacific regions. Globally standardized design and manufacturing systems enable highly coordinated project management and implementation results.

Key alliances with machine tool builders and other leading manufacturing technology enablers ensure a complete solution, optimizing the entire process — not just portions of it. This results in the most effective and efficient manufacturing process possible, leading to low implementation time and cost and rapid return on investment.

For more information, please contact us at 1.866.646.7113.

Energy

Energy Engineered Solutions

Kennametal is more than a supplier of tooling solutions. With a thorough understanding of the energy segment's process and application challenges, we proactively address production concerns to deliver productivity to customers seeking peak performance in demanding environments. Kennametal's success is based on our capabilities — our ability to work with you on customized solutions to optimize your results and our willingness to engage with a broad spectrum of materials, metalworking solutions, application and custom component manufacturing, and supply expertise. Our drive for success, enabled through our advanced materials sciences, application knowledge, and commitment to a sustainable environment, results in a broad portfolio of innovative, custom, wear-resistant solutions.

Please also see the new Kennametal Energy catalog (B-11-02786).

Engineered Solutions

Automotive

Automotive Engineered Solutions

Traditionally, Kennametal has been a strong player in the transportation field, pioneering innovative solutions with automotive, shipbuilding, and railroad customers. We deliver global services and products that exceed our customers' expectations and continually push the boundaries of science. In today's competitive world, no one can support our customers better, and in turn, deliver the continued service and quality that has become Kennametal's trademark.

Kennametal's global reach has helped our customers standardize processes and products to improve both cost and quality. We offer an intimate understanding of the economics of the automotive value chain and unparalleled customized solutions tailored to your needs. We can deliver superior value by listening closely and innovating based on what our customers say. Our goal is to help you be more competitive, at home and on a global scale.

If it rolls, floats, or flies,

Aerospace

Aerospace Engineered Solutions

From lightweight composite materials to exotic alloys, Kennametal is committed to reducing risks and costs in the manufacture of aerospace and defense programs. We partner with customers to implement standard and customized solutions with minimum cost per part and high repeatability in mind. Kennametal has unique capabilities and resources to cover the total manufacturing equation from roughing to automated deburring and finishing. Kennametal's best-in-class technologies and services deliver up to 30% cost reduction and 60% cycle time reduction.

Aerospace component surfaces are one of the key battlegrounds in environmentally friendly manufacturing. Surface treatments not only improve appearance of the part but also enhance wear resistance, provide corrosion protection, and improve friction control. These subtle manufacturing enhancements provide big dividends in the form of fuel efficiency, reliability, performance, and longer part life.

Kennametal has a solution that delivers innovation and productivity.

Service and Support

Kennametal Extrude Hone™

Precision Surface Management

- Fuel efficiency through fine flow tuning — Diesel Fuel System (DFS) and Gasoline Direct Injection (GDI).
- Emission reduction due to better spray shaping.
- Noise, friction, and wear reduction for automatic gearbox components.
- Air flow path enhancement to improve jet or helicopter turbine performance.
- Energy savings with centrifugal impeller pump increased efficiency.
- Surface stress relief on high-pressured thin wall component for extreme safety.

Core Technologies Offer

- **Electrochemical Machining (ECM):** Generator, fixture, and cathodes
RADIUSING, SHAPING, POLISHING, SURFACE STRESS RELIEF.
- **Abrasive Flow Machining (AFM):** Media and fixture design
RADIUSING, POLISHING, SURFACE STRESS RELIEF.
- **Thermal Energy Method (TEM):** Controlled combustion
MINIMIZING RISK OF HIDDEN BURRS AND CONTAMINATION.

Proven Solutions

Easy Access to Service and Support

- Engineering and Feasibility departments.
- Capital equipment solutions.
- Contract Shop activities (ramp up and production).
- Spare parts availability program.
- Metalcutting tooling combined with Precision Surface Management.
- Benefits of worldwide Kennametal logistics.
- Lean expertise to conduct global projects with customers.
- Cost per part solutions/Clic model for equipment.
- Parameters, cathodes, fixtures designs.
- Media design to part.
- Global Full Circle Program increases productivity resulting in less downtime of your equipment.

Service and Support

Kennametal Extrude Hone™

Proven Solution: Save Energy, Save Money

- Improving closed pump impellers inner flow passage roughness to increase up to 11% peak efficiency and lower energy consumption.
- A coal-powered plant equipped with six boiler feed pumps can reduce parasitic loss, representing at least \$500,000 annual savings (driving the pumps) by 1% of the power generated.
- This process and savings can also be applied to natural gas centrifugal closed pump impellers.

Precision Surface Management Matters

Kennametal Extrude Hone Abrasive Flow Machining (AFM) surface and flow enhancement solutions provide the energy segment with significant savings in pump efficiency improvements.

- The AFM process is the method of choice for material removal at the area of greatest restriction and surface improvement of passages not accessible by other methods.
- AFM has documented efficiency proven solutions in the automotive and aerospace industries.
- Two-way flow AFM process is a natural fit for closed impellers and diffusers.
- Inner flow passages of the impellers and diffusers benefit from AFM's selective material removal as well as surface finish improvement — both contributing to improved pump efficiency.

Before

After

Proven Solutions

Delivering Results throughout the Value Chain

Working with You

We have a strong focus on customer solutions, which helps develop an accurate understanding of industry needs. This is achieved through collaborative work with key players throughout the value chain:

Original Equipment Manufacturer (OEM)

Our business expertise is providing OEMs with key components, such as pumps, that deliver greater efficiency.

Foundry

Kennametal Extrude Hone™ specialists can bring added value early in the manufacturing chain, so you can deliver more than just a key component and exceed expectations every time.

End User

Currently in the best position to measure efficiency improvements, end users understand the direct impact of savings — anywhere along the value chain. They help us measure performance of the processed component against non-processed, providing a better understanding of efficiency improvement related to the Kennametal Extrude Hone AFM operation. The AFM Center of Excellence, in Irwin, PA, can perform feasibility testing with customer-specific parts to provide the optimal media needed for each process.

Media Is the Edge

The Kennametal Extrude Hone lab provides the energy industry with specific, engineered medias that deliver the highest performance for closed impeller polishing. We also have specific media with dedicated characteristics to enhance productivity and quality when polishing a closed impeller.

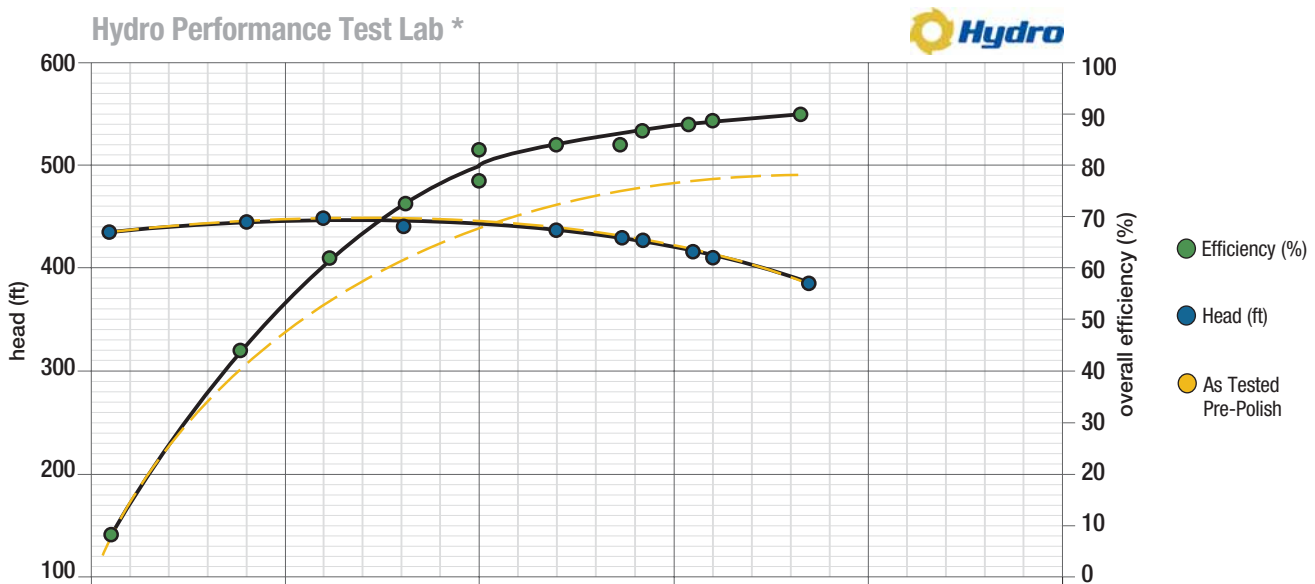

Service and Support

Kennametal Extrude Hone™

Abrasive Flow Machining for Pump Market Validation Testing

Formed in 1969 by a small group of pump engineers in Chicago, Hydro Aire is now the largest independent pump rebuilder with service centers throughout the world. A complete 5000 hp, 42,000 GPM pump test stand, designed in compliance with Hydraulic Institute standard and API 610, is located in Chicago. This is the ONLY independent non-OEM facility with this capability able to generate pump efficiency curves using LabView software.

* Testing by Hydro Aire in Chicago

Proven Solutions

The Energy Story

Proving the Pump Efficiency Improvement from the AFM Process

We have selected a 100 hp 1,200 GPM, single impeller overhung process pump as an example to validate the potential efficiency improvement able to be achieved with the AFM process.

- 1) New PACO™ pump purchased, which is about 79% efficient according to the manufacturer's data.
- 2) Pump tested and performance curve generated to confirm initial efficiency pre-AFM. Manufacturer data confirmed by our "before AFM" testing.
- 3) Pump was disassembled and impeller removed to AFM process. Pump was then reassembled.
- 4) Re-tested pump and generated performance curve.

Results: **Peak efficiency gain of +11%**, bringing the pump to 90% total efficiency! Gains were realized over the full usable range of the pump with **significant power savings** at given pressure and flow rate.

Test Component

Pump Type:	ITT Goulds 12BF
Pump Size:	3 x 4-10
Serial No.:	G1162372

Service and Support

Kennametal ToolBOSS™

Kennametal ToolBOSS™

Secure, High-Capacity Solutions

ToolBOSS™ quickly and consistently delivers quantifiable savings in hundreds of metalworking companies worldwide. Much more than a vending unit, the Kennametal ToolBOSS system is a secure, electronically locked tool storage cabinet that can establish 24-hour tool control for high-value items. It issues tools, returns tools, sends to re-work, supports EDI ordering, and provides for multi-vendor security.

Efficiency

Multiple drawers can be selected in one transaction, minimizing the time required to manage large stock volumes.

Future-Port

USB interface, as well as a DCS expansion port, for use with RFID and other ancillary equipment.

High-Speed Access

Rapid search and selection of an item is enhanced with LED identification system, guiding users to the correct drawer.

Traceability

Software provides a complete audit trail, tracking component usage details.

Expandability

Expandable up to 10 units per system, providing up to 1,121 secure locations.

To learn more about ToolBOSS, contact your local Authorized Distributor or visit www.kennametal.com

Reconditioning Services

Reconditioning Services

Our Reconditioning Services help optimize the total value of your metalcutting tools throughout their entire life cycle by giving the “like-new” performance characteristics – with rapid turnaround time – so the tools you need are always on-hand and perform just like new.

Reduce Tooling Cost by More than 50%

Example: 4" (10,5mm) HP-Drill B225A10500 KC7315 Material: Alloy steel 30 RC

Using Kennametal’s Reconditioning Services provides considerable savings throughout the life of your cutting tools and can reduce your overall tooling costs more than 50%.

For more information or to find the nearest reconditioning location, contact your local Authorized Distributor or visit www.kennametal.com

Service and Support

Carbide Recycling

Help Preserve and Protect Our Planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas. For more information, please visit www.kennametal.com/carbiderecycling

Service and Support

Cost per Part Services Program (CPP)

Build a Long-Term Relationship with the Leader in Metalworking Solutions that Provides:

- Monthly cost savings documented and captured in standardized KPI reports.
- Availability of Kennametal's latest technology to increase productivity and lower cost of operations.
- Onsite technical support available on a constant basis.
- Billing based on the output of your plant that eliminates inventory risk.

YTD Cost Savings Tracker

Site GOAL — \$300,000

Cost per Part Services Programs Are Designed to Take Advantage of Our Wear Solutions Expertise by Outsourcing Your Metalworking Requirements that:

- Improve productivity.
- Reduce risk.
- Manage inventory.
- Lower operational costs.

For more information, contact your local Authorized Distributor or visit www.kennametal.com

Service and Support

Customer Application Support (CAS)

Customer Application Support

Get Fast and Reliable Answers to Your Toughest Metalcutting Problems

Our Customer Application Support (CAS) Team is the metalworking industry's leading help desk resource for tooling application solutions and problem resolution.

Easy Access to Proven Metalworking Expertise!

Kennametal Customer Application Engineers assist customers and engineering groups throughout the world with expert tool selection and application recommendations for the entire range of Kennametal tooling.

Service Level Excellence

- Fast telephone response.
- Quick technical solutions.
- Efficient case management.

Services

- Operating parameters.
- Process optimization.
- Hardware support.
- Tooling selection.
- Troubleshooting.

Best-in-Class Support Tools and Technology

- Materials database.
- Application calculators.
- Tooling performance experts.

Looking for More Products or Product Information?

Use your smartphone or tablet to scan the QR codes throughout this catalog.

Throughout the Kennametal Innovations Master Catalog, you will find codes like the one shown here that will activate links containing more information about various products and services offered.

The QR codes that you will find within this catalog are designed to relate to the products or product families on the page where they are found. These codes will link you to expanded product information, such as application videos, informative drawings and animations, extra product charts and graphs, or simply to an expanded online catalog of products offered by Kennametal for all your drilling, turning, and milling needs.

Helpful Information to Get You Scanning

QR codes are activated when scanned with a dedicated QR scanning application using the onboard camera of your smartphone or tablet.

If you currently have a QR scanner on your smartphone or tablet, look for codes to learn more information about our products. Don't have a QR scanner on your device? It's simple to get one. Just go to your device's application store, and search for a "QR code scanner". Follow your application store's directions on downloading an application, and then launch your QR scanner.

- With your scanner, center the QR code in the camera window of your application.
- When the scanner locks onto the image, you will be on your way to the embedded information in the QR code.
- Once the webpage, video, or other information linked to the QR code opens or loads, you can freely interact.

When you need information quickly on a product or an extended product catalog, skip the web search and long website URLs and scan the provided QR codes in this catalog.

Scan the code at the top of the page to visit our website and online product catalog.

Merchandise

Merchandise

New Merchandise Available! Place Your Order Today!

Introducing a new line of Kennametal merchandise. Place an order for any of the following quality products with your Authorized Kennametal Distributor or visit www.kennametal.com.

Solid Performance Polo

100% polyester. No curl/rib-knit jacquard collar. Antimicrobial.

- Color: charcoal

Windbreaker Jacket

Comfortable fit with a water-repellent shell and mesh lining, lower front pockets for added convenience. 100% polyester. Features elasticized cuffs and an open bottom with a drawstring cord.

- Color: black

Extreme Colorblock Polo

100% polyester. Moisture wicking, antimicrobial, and raglan sleeves.

- Color: black/gold

Extreme Cap

Extreme Cap is a classic unstructured cap made of soft laundered cotton for a casual, comfortable feel. Pre-curved visor and six sewn eyelets give this cap the look of a traditional baseball cap. Fabric strap with slide buckle.

- Color: black and camo

Titleist® DT SoLo® Golf Balls

The new DT SoLo golf ball will appeal to a broad range of golfers seeking the combination of long distance, exceptional feel, responsive short game control, and cut-proof cover durability.

- Color: white

Hanes® TAGLESS® T-Shirt

100% cotton. Pre-shrunk.

- Color: black

12 oz. Ceramic Tumbler

Silicone lid. Double-wall ceramic tumbler. 5.5" tall without the lid. Fits in most corporate coffee machines. Includes 1-piece gift box. 11 oz.

- Color: black with black lid

Majestic Ballpoint Pen

Majestic metal ballpoint pen with chrome trim and colored center band.

- Color: black metal with chrome trim

Dakota Multi-Tool

4" closed. Silver anodized aluminum handles. Features spring-action needle nose and regular pliers, serrated knife blade, straight-edge knife blade, can/bottle opener, file, 2 screwdrivers, Phillips head screwdriver, and more. Comes with nylon belt pouch. Boxed.

- Color: gray

Jupiter Flashlight

Metal, 17" white LED flashlight. Push button power switch. Wrist strap. Three AAA batteries included (not inserted).

- Color: black

Bottle Opener

Contemporary design, aluminum bottle opener/ key tag. Ergonomic, curved construction improves handling and safely opens metal bottle caps.

- Color: black

Collapsible Koozie

Fits 16 oz. water bottles and longnecks.

- Color: black

Notebook Combo

6-1/4" x 8-1/2". Double spiral binding, elastic pen loop on cover. 80 white-lined sheets (non-refillable).

- Color: yellow

Aluminum Bottle

The ribbed aluminum bottle is BPA free and has a silicone color band with a matching drinking spout and lid.

- Color: metal/black/yellow

Visit www.kennametal.com to see all available merchandise and for ordering details.

Inserts for Every Turning Operation

Kennametal, the trusted innovator in metalcutting technology, offers a complete range of indexable inserts for general turning operations. From roughing to finishing, Kennametal has the correct insert.

Plus, Kennametal offers the next generation in tooling with Beyond™. Harnessing advanced science and exceptional experience, our Beyond inserts deliver unparalleled levels of productivity, efficiency, dependability, and profitability.

Features and Benefits

Up to 30% Higher Productivity and Profitability

- Achieve higher metal removal rates (speed, feed, and depth of cut).
- Gain longer tool life.

Versatility

- Products can be applied across a wide range of applications.
- Can be used in low- to high-speed applications.

Reliability

- Deliver uniform wear for predictable tool life.
- Achieve reduced depth-of-cut notching.
- Virtually eliminate chip flow damage.

Complete Portfolio

- The Beyond product portfolio can be used in a complete range of steel, cast iron, and stainless steel ISO turning workpieces.

Technical Details • Features

Post-Coat Treatment

- Improves edge toughness.
- Long predictable tool life.
- Reduces depth-of-cut notching.
- Wide range of applications.
- Reduces stresses.
- Reduces microchipping.
- Improves coating adhesion.

Fine-Grained Alumina Layer

- Provides coating integrity at elevated speeds.
- Higher productivity and dependability at high cutting temperatures.

Micro-Polished Edges

- Improves edge toughness.
- Provides smooth outer surface to reduce forces, friction, and workpiece sticking.

Post-Coat Grinding — Bottom

- Provides secure seating surface.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

C Insert Shape

- H** Hexagon 120°
- O** Octagon 135°
- P** Pentagon 108°
- R** Round
- S** Square 90°
- T** Triangular 60°
- C** Rhomboid 80°
- D** 55°
- E** 75°
- M** 86°
- V** 35°
- W** Trigon 80° with enlarged corner angles
- L** Rectangular 90°
- A** Parallelogram 85°
- B** 82°
- N/K** 55°

N Insert Clearance Angle

- A** 3°
- B** 5°
- C** 7°
- D** 15°
- E** 20°
- F** 25°
- G** 30°
- N** 0°
- P** 11°
- O** Indicated for other clearance angles requiring descriptions.

M Tolerance Class

Tolerances apply prior to edge prep and coating

D = Theoretical diameter of the insert inscribed circle

Positive Inserts

Screw-On Inserts

- Screw-On inserts are your first choice for I.D. turning of all materials and O.D. turning on small to medium lathes.
- Available in flat-top and chip-control geometries with both molded and ground peripheries. Suitable for all workpiece materials.

See pages:
Carbide: B88–B115
Superhard: B187–B197

Kendex™ and V-Bottom Inserts

- Kendex positive and V-bottom inserts are your first choice for productive machining of high-temperature alloys on medium to large lathes.
- Available in flat-top geometries with ground periphery.

See pages:
Carbide: B84–B87
Ceramic: B128–B130
Superhard: B185–B186

See pages B128–B129 for V-bottom product listing.

Top Notch™ Profiling Inserts

- First choice for high-production profiling.
- Unique insert clamping design offers superior rigidity.
- Available in chip-control geometries with both molded and ground peripheries. Suitable for all workpiece materials.

See pages F43–F48 for product listing.

K-Lock™ Inserts

- K-Lock inserts are ideal for deep grooving and profiling.
- A unique insert clamping system allows for unimpeded chip flow.
- Available in molded and ground peripheries.

See page F61 for product listing.

Negative Inserts

Kenloc™ Inserts

- Kenloc inserts are your first choice for general machining of all materials on medium to large lathes.
- Kenloc inserts offer the best economy for high metal removal rates.
- Available in flat-top and chip-control geometries with both molded and ground peripheries. Suitable for all workpiece materials.

See pages:
Carbide: B40–B83
Ceramic: B118–B121
Superhard: B187–B197

Kendex Inserts

- Ceramic Kendex inserts are a great choice for productive machining of high-temp alloys.
- Kendex negative rake inserts are also recommended for the machining of hardened materials and cast irons.
- Available in flat-top geometries with molded and ground peripheries.
- Wide selection of standard toolholders are offered.

See pages B122–B127 for product listing.

Top Notch Turning Inserts

- Ceramic Top Notch Turning inserts are your first choice for high-speed roughing and finishing of cast iron parts.
- Available in flat-top geometries with molded and ground peripheries.

See pages B122–B127 for product listing.

Insert Selection System

How to Use

Kennametal's three-step insert selection system makes choosing and applying the most productive tool as easy as 1, 2, 3. Tool recommendations are based on six workpiece material groups, optimizing selection accuracy.

Example: Six workpiece material groups

■ Step 1 • Select the insert geometry

Given: depths of cut = .040" (1mm)
feed = .016 IPR (0,4mm)
Unknown: insert geometry
Solution: -MN

■ Step 2 • Select the grade

Given: cutting conditions:
lightly interrupted cut 
Geometry: -MN
Unknown: grade
Solution: KCP25

■ Step 3 • Select the cutting speed

Given: grade KCP25 
cutting conditions
AISI 1010 
Unknown: cutting speed
Solution: 925 SFM (280 m/min)

Need help in selecting a product?
Additional information can be obtained by contacting
Kennametal's Customer Application Support Team.
Go to www.kennametal.com for your country's phone number.

Step 1 • Select the insert geometry

H	Hardened Materials

Step 2 • Select the grade

cutting condition	-FF	-FN	-MN	-RN	-RP	-11	-UF	-LF	-FP	-MF	-MP
heavily interrupted cut	KCP10	KCP25	KCP30	KCP30/KCP40	KCP30/KCP40	—	KC5010/KCP25	KCP25	KCU25/KCP25	KCP40	KCM25
lightly interrupted cut	KCP10	KCP25	KCP25	KCP30/KCP40	KCP30/KCP40	—	KC5010/KCP25	KCP25	KCP25	KCP25	KCP25
varying depth of cut, casting, or forging skin	KCP05/KT315	KCP10	KCP10	KCP30/KCP40	KCP30/KCP40	KT315	KCP10	KCP10	KCP10	KCP10	KCP10

Step 3 • Selecting the cutting speed

Low-Carbon (<0,3% C) and Free-Machining Steel		speed — m/min (SFM)									starting conditions	
material group	grade	135 (450)	180 (600)	225 (800)	275 (900)	320 (1050)	360 (1200)	410 (1350)	455 (1500)	495 (1650)	m/min	SFM
P1	KCP05/KTP10										435	1450
	KCP10										395	1320
	KCP25										275	925
	KCP30/KCP40										210	700

New Beyond™ Material Group Selection Guide:

To optimize speed recommendations, Beyond material subgroups have been added to each of the six workpiece material groups.

material	material group ISO code	number of material subgroups
steel	P	1-6
stainless steel	M	1-3
cast iron	K	1-3
non-ferrous materials	N	1-8
high-temp alloys	S	1-4
hardened materials	H	1

Step 1 • Select the insert geometry

Negative Wiper Inserts

Positive Wiper Inserts

Step 2 • Select the grade

cutting condition	Negative Insert Geometry			Positive Insert Geometry	
	-FW	-MW	-RW	-FW	-MW
heavily interrupted cut	-	-	KCP25	-	KCP25
lightly interrupted cut	KCP10	KCP25	KCP25	KCP25	KCP25
varying depth of cut, casting, or forging skin	KCP05/KT315	KCP10	KCP10	KCP10/KCK20	KCP10/KCK20
smooth cut, pre-turned surface	KCP05/KT315	KCP05	KCP10	KCP10/KT315	KT315/KT315

Step 1 • Select the insert geometry

Negative Inserts

Positive Inserts

*-RP – Supplemental geometry for high-strength materials

Step 2 • Select the grade

cutting condition	-FF	-FN	-MN	-RN	-RP	-11	-UF	-LF	-FP	-MF	-MP
heavily interrupted cut	KCP10	KCP25	KCP30	KCP30/KCP40	KCP30/KCP40	—	KC5010/KCP25	KCP25	KCU25/KCP25	KCP40	KCM25

Coating		Grade Description	05	10	15	20	25	30	35	40	45	
Uncoated Carbide Grades	KU10 C3	Composition: A hard, low binder content, WC/Co fine-grain grade. Application: The KU10 grade has excellent abrasion resistance for machining cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and most high-temperature alloys. Use as a general-purpose grade for non-ferrous materials.	M									
			K									
	N											
	S											
			beyond									
	K313 C3-C4	Composition: A hard, low binder content, unalloyed WC/Co fine-grain grade. Application: Exceptional edge wear resistance combined with very high strength for machining titanium, cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and most high-temp alloys. Superior thermal deformation and depth-of-cut notch resistance. The grain structure is well controlled for minimal pits and flaws, which contributes to long, reliable service.	M									
K												
N												
S												
		beyond										
K68 C3	Composition: A hard, low binder content, alloyed grade WC/Co fine-grain grade. Application: The K68 grade has excellent abrasion resistance for machining cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and as an alternative to the K313 grade on most high-temperature alloys. Use as a general-purpose grade for non-ferrous materials.	M										
		K										
N												
S												
		beyond										
PVD-Coated Carbide Grades	KCU10 C3-C4	Composition: An advanced multilayer PVD coating over a very deformation-resistant unalloyed carbide substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities. Application: The KCU10 grade is ideal for finishing to general machining of most workpiece materials at a wide range of speed and feed capabilities. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys with improved edge toughness and higher cutting speed/feed capability.	P									
			M									
	K											
	N											
	S											
			beyond									
	KCU25 C2, C6	Composition: An advanced PVD grade with hard AlTiN coating and fine-grain unalloyed substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities. Application: The KCU25 grade is ideal for general machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials in a wide range of speeds and feeds with improved edge toughness for interrupted cut and high feed rates.	P									
M												
K												
N												
S												
		beyond										
KC5010 C3-C4	Composition: An advanced PVD AlTiN coating over a very deformation-resistant unalloyed carbide substrate. The new and improved coating enables speeds to be increased by 50–100%. Application: The KC5010 grade is ideal for finishing to general machining of most workpiece materials at higher speeds. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys under stable conditions. It also performs well machining hardened and short chipping materials.	P

Coating	Grade Description	Performance Matrix												
		05	10	15	20	25	30	35	40	45				
PVD-Coated Carbide Grades KC5025 C2, C6	Composition: An advanced PVD-AlTiN-coated grade with a tough, fine-grain unalloyed substrate. Application: For general-purpose machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials. Speeds may vary from low to medium and will handle interruptions and high feed rates.	P												
		M												
		K												
		N												
		S												
 KC5410 C3-C4	Composition: A PVD TiB ₂ coating over a very deformation-resistant unalloyed substrate. Application: Designed for roughing, semi-finishing, and finishing of free machining (hypoeutectic <12.2% Si) aluminum, aluminum alloys, and magnesium alloys. The TiB ₂ coating is harder than TiN and TiAlN coatings and has an extremely smooth surface, resulting in reduced surface friction, speedy chip flow, and outstanding wear resistance. Built-up edge is prevented because this coating has a very low affinity for aluminum. The substrate is unalloyed and fine grained and offers sharp edges, smooth surfaces, and excellent thermal deformation resistance and edge integrity. Inserts with a ground periphery are polished before coating and have a sharp edge. Molded inserts have a light hone.													
		N												
 KC5510 C3-C4	Composition: An advanced PVD AlTiN-coated fine-grain tungsten carbide grade. Application: The KC5510 grade is specifically engineered for the productive machining of high-temp alloys. The fine-grain tungsten carbide 6% cobalt substrate has excellent toughness and deformation resistance while the advanced PVD coating enables metalcutting speeds double those of conventional PVD-coated cutting tools.	P												
		M												
		K												
		N												
		S												
		H												
 KC5525 C2-C6	Composition: Advanced PVD AlTiN-coated fine-grain high-cobalt carbide grade. Application: The KC5525 grade utilizes the same advanced PVD coating as the KC5510 grade in conjunction with a fine-grained tungsten carbide 10% cobalt substrate. The higher cobalt enables added security in interrupted cuts while the fine-grained WC maintains hardness-resisting deformation at higher speeds. Designed for medium to heavy interruptions in high-temp alloys.	P												
		M												
		K												
		N												
		S												
CVD-Coated Carbide Grades KCP05 C3-C4	Composition: An innovative, highly deformation-resistant, cobalt-enriched substrate with a specially designed, adherent MTCVD-TiCN-Al ₂ O ₃ coating. Application: For finishing to semi-finishing of most steels, ferritic, martensitic, and PH stainless steels and cast irons. Provides excellent combination of deformation resistance and insert edge strength. The new coating combined with a state-of-the-art post-coat treatment provides high-productivity with long predictable tool life and superior workpiece surface finish.	P												
		K												
 KCP10 C3, C7	Composition: A specially engineered cobalt-enriched carbide grade with thick MTCVD-TiCN-Al ₂ O ₃ coating for maximum wear resistance. Application: An excellent finishing to medium machining grade for a variety of workpiece materials, including most steels, ferritic, martensitic, and PH stainless steels, and cast irons. The cobalt-enriched substrate offers a balanced combination of deformation resistance and edge toughness, while the thick coating layers offer outstanding abrasion resistance and crater wear resistance for high-speed machining. Smooth coating provides resistance to edge build-up and microchipping and produces excellent surface finishes.	P												
		K

CVD-Coated Carbide Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
 KCP25 C2-C3, C6-C7	<p>Composition: A tough cobalt-enriched carbide grade with a newly designed multilayer MTCVD-TiCN-Al₂O₃ coating with superior interlayer adhesion.</p> <p>Application: Best general-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance with excellent insert edge strength. Coating layers offer good wear resistance over a wide range of machining conditions and the post-coat treatment minimizes microchipping and improves coating adhesion to substrate leading to long tool life and improved workpiece finishes.</p>	P								
		K								
 KCP30 C5-C6	<p>Composition: A newly engineered, tough cobalt-enriched carbide grade with an advanced multilayer TiN-MT-TiCN-Al₂O₃ coating.</p> <p>Application: For medium to rough machining of all carbon, alloy, and stainless steels. The substrate design provides superior insert strength that is required for this application, and the multilayer coating adds wear resistance to the insert resulting in long tool life.</p>	P								
		K								
 KCP40 C5-C6	<p>Composition: A tough carbide grade with a moderately thick TiN-MT-TiCN-Al₂O₃ coating.</p> <p>Application: For heavy roughing of carbon, alloy, and stainless steels. The substrate-coating combination provides unbelievable toughness and operational security allowing high metal removal rates even in most demanding interrupted cuts.</p>	P								
		M								
 KCK05 C3-C4	<p>Composition: A multilayered coating with moderately thick MTCVD TiCN-Al₂O₃ layers over a highly deformation-resistant carbide substrate.</p> <p>Application: Designed for high-speed machining of gray and ductile irons. The substrate and coating architecture together with CW5 post-coat treatment ensure a tremendous tool life advantage, especially when cutting higher tensile strength ductile and gray irons where workpiece size consistency and reliability of tool life are critical. Excellent both in straight and varied depths of cut.</p>	P								
		K								
 KCK15 C3-C4	<p>Composition: A multilayered coating with thick MTCVD TiCN-Al₂O₃ layers applied over a carbide substrate specifically engineered for cast irons.</p> <p>Application: Delivers consistent performance in high-speed machining of gray and ductile irons. The substrate design permits the insert to stay in the cut for a long time at high speeds with minimum deformation. The thick CVD coating and post-coat treatment provide superior wear resistance ensuring long and consistent tool life. Can be applied both in straight and lightly interrupted cuts.</p>	P								
		K								
 KCK20 C2-C3	<p>Composition: A specially toughened MTCVD-TiCN-Al₂O₃ coating over a wear-resistant substrate.</p> <p>Application: The KCK20 grade is specifically engineered to maximize coating adhesion and edge strength making this grade ideal in wet interrupted cutting of gray and ductile irons. It can be used in a wide range of applications from finishing to roughing to maximize productivity wherever strength and reliability are needed.</p>	P								
		K								

Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

Coating	Grade Description	Performance Chart									
		05	10	15	20	25	30	35	40	45	
CVD-Coated Carbide Grades	KCM15 C2-C3 Composition: A multilayer MTCVD-TiCN-Al ₂ O ₃ coated carbide grade. Application: An excellent finishing to medium machining grade for austenitic stainless steels at higher speeds and covers a broad range of steel applications in the P20-25 range. KCM15 grade in combination with unique geometries have been designed to resist depth-of-cut notching and minimize burr formation. The post-coat treatment reduces coating stresses, improves coating adhesion, minimizes microchipping and edge build-up, and improves workpiece finish. beyond	P									
		M									
		K									
CVD-Coated Carbide Grades	KCM25 C1-C2 Composition: A multilayer CVD coating comprised of TiN-MT-TiCN-Al ₂ O ₃ layers over a tough, cobalt-enriched carbide substrate. Application: This CVD-coated grade is designed for general-purpose machining of austenitic stainless steels at moderate speeds and feeds. KCM25 inserts offer an extraordinary combination of toughness, built-up edge resistance, and wear resistance in stainless steel applications. beyond	P									
		M									
		K									
CVD-Coated Carbide Grades	KCM35 C1-C2 Composition: A multilayer TiN-MT-TiCN-Al ₂ O ₃ CVD coating over a super-tough substrate. Application: The KCM35 grade is engineered to take on the most brutal cast stainless steel machining applications. The substrate withstands heavy interruptions, while the coating provides the wear resistance needed for long tool life. The polished surface resists edge build-up, even at slow cutting speeds. KCM35 grade is available in insert sizes and geometries appropriate for heavy feeds and large depths of cut. beyond	P									
		M									
		K									
PVD-Coated Cermet Grades	KT315 C3, C7 Composition: A multilayer PVD-TiN/TiCN/TiN-coated cermet turning grade. Application: Ideal for high-speed finishing to medium machining of most carbon and alloy steels and stainless steels. Performs very well in cast and ductile iron applications, too. Provides long and consistent tool life and will produce excellent workpiece finishes.	P									
		M									
		K									
PVD-Coated Cermet Grades	KTP10 C3, C7 Composition: A multilayer, PVD-TiN/TiCN/TiN-coated cermet turning grade. Application: Ideal for high-speed finishing to medium machining of most carbon and alloy steels and stainless steels. Performs very well in cast and ductile iron applications, too. Provides long and consistent tool life and will produce excellent workpiece finishes.	P

Ceramic Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KYS25 C4	<p>Composition: SiAlON ceramic with a multi-layered alumina-TiCN CVD coating. Application: Compliments the KYS30 grade when machining high-temp and nickel-based alloys and cast materials with high Brinell hardness. This advanced CVD coating provides excellent chemical and depth-of-cut notch resistance compared to whisker ceramics.</p> <p>beyond</p>									
		S								
KYS30 C4	<p>Composition: Latest and most advanced sialon material developed. Application: Combines excellent wear properties, fracture toughness, and thermal shock resistance for general-purpose to finish machining of high-temp alloys. Provides superior depth-of-cut notch resistance compared to whisker ceramics.</p> <p>beyond</p>									
		S								
KYK10 -	<p>Composition: An advanced sialon ceramic grade. Application: Provides maximum wear resistance. Use for high-speed continuous turning of gray cast iron, including through scale.</p> <p>beyond</p>									
		K								
KYK25 C3	<p>Composition: Pure silicon nitride ceramic with an alumina CVD coating. Application: Excellent combination of toughness and edge wear resistance. Used for general-purpose machining of gray, ductile, or nodular cast irons.</p> <p>beyond</p>

Coating	Grade Description	wear resistance ← → toughness										
		05	10	15	20	25	30	35	40	45		
Ceramic Grades KY4300 C4 Composition: Whisker ceramic with a matrix of Al ₂ O ₃ + SiC. Application: The SiC whiskers embedded in the micro structure give this ceramic excellent toughness for cutting high-temp alloys and cast materials with high Brinell hardness.	 KY3500 C2 Composition: Pure silicon nitride grade. Application: Maximum toughness. Used at high-feed rates for rough machining of gray cast iron, including machining through interruptions.	 KY4400 C4, C8 Composition: A PVD TiN coating over an aluminum oxide and titanium carbonitride composite ceramic (Al ₂ O ₃ /TiCN). Application: Used for finish turning of hardened steels and irons (greater than 45 HRC). Where possible, use under dry conditions in smooth or varied depths of cut. Can also be applied in finish turning of nickel alloys, cobalt alloys, and powder metals.										
			M									
			S									
PCBN – Polycrystalline Cubic Born Nitride Grades KB1340 — Composition: A high CBN content, solid PCBN insert having multiple cutting edges. Application: Applied in roughing to finishing of fully pearlitic gray cast iron, chilled irons, high-chrome alloyed steels, sintered powdered metals, and heavy cuts in hardened steels (>45 HRC). Also use for finishing chilled cast iron and fully pearlitic cast iron. The solid PCBN insert offers better security and shock resistance compared to tipped PCBN inserts, while also enabling deeper depth-of-cut capabilities.	 KB1345 — Composition: A high CBN content, PCBN tip brazed onto a carbide insert. Application: Applied in roughing to finishing of fully pearlitic gray cast iron, chilled irons, high-chrome alloyed steels, sintered powdered metals, and heavy cuts in hardened steels (>45 HRC). Also use for finishing chilled cast iron and fully pearlitic cast iron. The tipped PCBN insert is available in a wide range of insert styles including positive rake geometries that are ideally suited for boring applications.	 KB1610 — Composition: A low CBN content, PCBN tip brazed onto a carbide insert. Application: Designed for precision finishing in smooth cuts on hardened steels (>45 HRC) where optimal surface finish is needed. Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, carburized and nitrided irons, and some hard coatings. Do not apply on soft steel.

PCBN – Polycrystalline Cubic Born Nitride Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KB1625 —	Composition: A medium CBN content, PCBN tip brazed onto a carbide insert. Application: Designed for roughing to finishing of hardened steels (>45 HRC) where optimal surface finish is needed. It can be used in continuous to interrupted cutting of bearing steel, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburized and nitrided irons, and some hard coatings.									
		H								
KB1630 —	Composition: A high CBN content, PCBN tip brazed onto a carbide insert. Application: Designed for roughing to finishing in interrupted cuts on hardened steels (>45 HRC). It can also be applied on gray cast iron, chilled irons, high-chrome alloyed steels and sintered powdered metals. The tipped PCBN insert is available in a wide range of insert styles, including positive rake geometries, that are ideally suited for boring applications.									
		K								
		S								
		H								
KB5610 C4, C8	Composition: A low content PCBN grade with a PVD TiAlN coating for added wear resistance. Application: Designed for the precision machining of hardened steels (>45 HRC). The PVD coating offers improved wear resistance and excellent surface finish capabilities. It can be very effectively applied on bearing steels, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburized and nitrided irons, and some hard coatings. Available in a multitip format with a tremendous breadth of edge preps, insert styles, and wiper geometries.									
		H								
KB5625 C4, C8	Composition: A PVD TiAlN coating over a medium content, PCBN tip brazed onto a carbide insert. Application: Designed for roughing to finishing of hardened steels (>45 HRC). Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case-hardened steels, carburized and nitrided irons, and some hard coatings.									
		H								
KB5630 C4, C8	Composition: A high content PCBN grade with a PVD AlTiN coating for added wear resistance. Application: Designed for roughing to finishing in hardened steels (>45 HRC), abrasive workpiece materials such as sintered valve seat materials, powder metallurgy tool steels, and hard high-alloy cast irons. The PVD coating provides resistance to crater wear and increased resistance to chipping. The tipped PCBN insert is available in a wide range of insert styles, including positive rake geometries, that are ideally suited for boring applications.

PCD – Polycrystalline Diamond Grades

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KD1400 —	Composition: An ultra-fine-grain, polycrystalline diamond (PCD) tip brazed onto a carbide substrate. Application: Designed for general-purpose turning of primarily non-ferrous materials. It can be applied over a wide range of continuous to interrupted cuts where superior surface finish is needed. Use on low to medium silicon-content aluminum alloys, non-metallics, copper, and brass- and zinc-based alloys. The ultra-fine-grain diamond particle size enables superior surface finishes while ensuring the best mechanical shock resistance of any PCD cutting tool.									
KD1405 —	Composition: A pure CVD-deposited diamond-sheet tool brazed directly to a carbide substrate. Application: KD1405 is Kennametal's most abrasion-resistant tool material for non-ferrous and non-metallic materials. Best applied when abrasion resistance is the desired benefit.									
KD1425 —	Composition: A multimodal PCD grade with a range of grain sizes brazed onto a carbide substrate. Application: Engineered for extreme abrasion resistance, combined with good edge strength for demanding applications. An ideal choice for high-silicon aluminum alloys, bi-metallic (AL/GCI) materials, MMC, carbon-fiber reinforced plastics, and other abrasive non-metallic materials.

Carbide Inserts

Primary Application

Kennametal offers a complete portfolio of ISO-/ANSI-style inserts. Positive, negative, CVD, PVD, or uncoated, we have the insert to help increase productivity and achieve greater savings.

Plus, our carbide insert line contains Beyond™ technology. Beyond inserts offer you greater versatility, reliability, and up to 30% higher productivity.

Beyond™ CVD Grades

- Higher productivity and profitability — up to 300% higher.
- Lower cutting forces — Increase speeds and reduce cycle time.
- Extended tool life.
- Predictable tool life / Uniform wear.
- Resists chip flow damage.
- Consistent surface finish.
- Products can be applied across a wide range of applications.
- Use it in low speed to high speed applications.
- For finish to rough turning of steel, cast iron, stainless steel, and high temp alloy turning.

Beyond™ PVD Grades

KCU10™

- PVD-coated grade with superior wear resistance at elevated temperatures, allowing higher metal cutting speeds.
- For use in all materials, especially stainless steels and high-temp alloys.
- Improved depth-of-cut notch resistance
- Increase speed by 20–30% or feed by 10–15%.
- Use in finishing to medium applications.

KCU25™

- PVD-coated grade with superior edge toughness and excellent wear resistance. Medium to roughing applications.
- Use in all materials.
- Increase speed, feed, and depth of cut by 10–20%.

Ceramic Inserts

Primary Application

Kennametal's advanced materials, utilizing Beyond™ technology, offer greater wear resistance and toughness, depending on the job.

KYK ceramic inserts are the first choice for high speed, continuous, and lightly interrupted turning applications in cast iron materials. Benefits include improved fracture toughness, better wear resistance, and extended application range. Combining KYK10™ and CVD-coated KYK25™ with our other ceramic grades for cast iron, Kennametal provides a complete, high-performance ceramic portfolio that can reduce machining cycle times and lower manufacturing costs.

KYS ceramic inserts are the first choice for high-speed applications in high-temp alloys. The multilayer coating offers enhanced chemical wear resistance versus uncoated grades. A superior sialon ceramic substrate provides excellent depth of cut notching resistance versus whisker-reinforced ceramics.

Features and Benefits

KYK10

- Improved wear resistance and toughness with 20% longer tool life than current KY1310™.
- Best suited for continuous turning of cast iron materials and in lightly interrupted cuts.
- Available in Kenloc™, Kendex™, and Top Notch™ turning insert styles.

KYK25

- 12 micron thick coating provides excellent wear resistance and pre-coat treatment allows for very consistent tool life and performance in cast iron applications.
- Up to 30% longer tool life vs. competitors' CVD-coated ceramic grades.
- Available in Kenloc, Kendex, and Top Notch turning insert styles.

KY3500™

- The industry standard for high-speed turning.
- Excellent for roughing to finishing operations in wet or dry cuts with speeds up to 3,400 SFM.
- Performs well in difficult interrupted cuts in ductile or malleable cast iron (<70 KSI tensile strength) at speeds of 900–1,600 SFM.

KYS25™

- Excellent surface finish, lower cutting forces, higher speeds.
- Advanced CVD coating provides excellent chemical and depth-of-cut notch resistance.

KYS30™

- Long, consistent tool life.
- Excellent toughness and depth-of-cut notch resistance.
- Performs in a wide variety of machining conditions, including interrupted cuts and applications involving scale.

Beyond™ ISO

Ceramic Insert Expansion

KYK10™, KYK25™, KYS25™, and KYS30™

The new Beyond ISO KYK Ceramic Inserts are the first choice for high speed, continuous, and lightly interrupted turning applications in grey cast iron. These premium ceramic solutions for continuous cast iron turning applications offer improved fracture toughness, better wear resistance, and extended application range. By combining KYK10 and CVD-coated KYK25 with Kennametal's other ceramic grades for cast iron materials, Kennametal provides a complete, high-performance ceramic portfolio that can be optimised to reduce machining cycle times and lower overall manufacturing costs.

KYK10:

- Best suited for continuous turning of cast iron materials and in lightly interrupted cuts.

KYK25:

- Excellent wear resistance and pre-coat treatment allows for very consistent tool life and performance in a multitude of cast iron applications.

KYS25:

- Excellent surface finish, lower cutting forces, higher speeds.

KYS30:

- Excellent toughness and depth-of-cut notch resistance.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

Superhard Materials • PCBN and PCD

Superhard Tool Materials	B132–B173
Application Areas	B134–B135
PCBN	B137–B163
PCD	B165–B173
Superhard Inserts	B174–B197

■ Properties of PCD and PCBN cutting tool materials

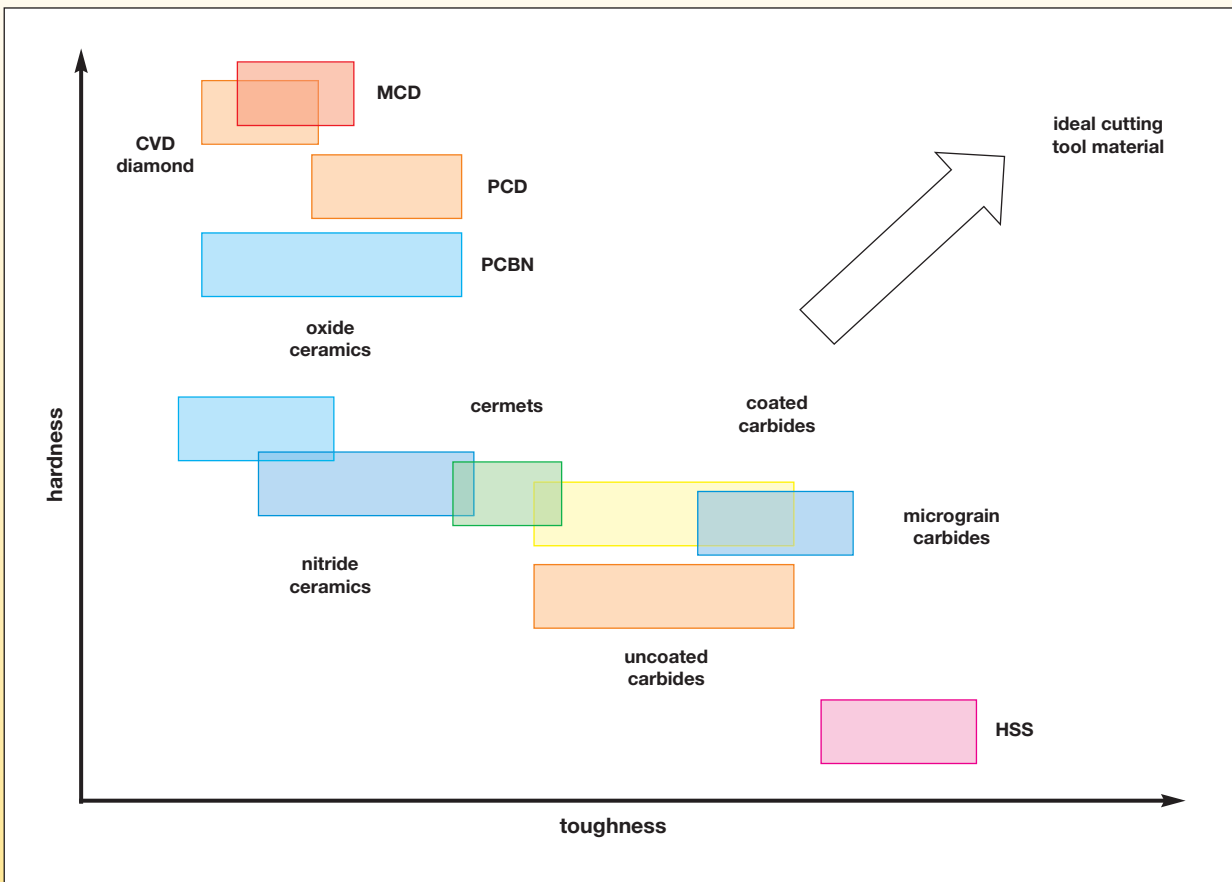

The current global metalcutting climate has put increased focus on high productivity and cost reductions coming from cutting tools. These requirements lead to the rapid growth and implementation of cutting tools using superhard materials. As the name implies, these materials have a significant advantage in hardness over conventional tool materials, which from the end user point of view, translates into increased productivity (higher cutting speeds, longer tool life, etc.), lower tooling cost per part, and also, the ability to process materials previously un-machinable with conventional tooling.

The most widely known superhard materials are diamond and cubic boron nitride. Our industry uses the polycrystalline forms of these materials, i.e., polycrystalline diamond (PCD) and polycrystalline boron nitride (PCBN). PCD tooling is mainly targeted at the machining of non-ferrous materials (e.g., aluminum alloys, plastics, CFRPs, composites, titanium alloys, ceramics, carbides, etc.) whereas PCBN targets iron-based alloys (e.g., cast irons, hard steels, iron-based composites, etc.)

Kennametal is at the forefront of developing and implementing superhard materials in our standard and special tooling solutions across all our product lines. Kennametal's approach to superhard tooling starts with customer needs and constraints. We then use fundamental research to develop the best superhard solutions that would make available the best value for the customer and respond to their specific demands.

■ Where to use PCD and PCBN

Diamond and cubic boron nitride (CBN) are the most commonly known superhard materials. For cutting tools, they are used in their polycrystalline form, i.e., PCD and PCBN.

PCBN/PCD Inserts

■ Choosing between PCD and PCBN

It is primarily their thermochemical stability that determines the suitability of the two materials for specific areas of application. For standard PCD, this means that it is restricted to workpiece materials where the cutting temperature does not exceed 700 °C and has no affinity with carbon if diffusion wear of the cutting edge is to be avoided at elevated temperatures. Operations that satisfy these conditions are, for example, the machining of non-ferrous metals, wood, plastics, and minerals where PCD mainly competes against tungsten carbide and, to some extent, high-speed steel.

By contrast, PCBN is thermally stable up to approximately 1200 °C and has high resistance to chemical attack. As a result, extreme temperatures, such as occur when machining hard ferrous metals, do not pose difficulties and can be used to promote self-induced hot cutting. Therefore, technical and economic benefits can be achieved, particularly in comparison with grinding, and in most cases, performance is significantly better than that attainable with conventional tool materials, such as tungsten carbides and ceramics.

There are limitations for PCBN, however, in the machining of austenitic steels and ferritic cast irons, where more reactive phases result in increased PCBN edge wear.

■ PCBN

Increased productivity can be achieved with PCBN tools through:

- Higher cutting speeds.
- Higher feed rates.
- Longer tool life.
- Less machine downtime.

- More parts per machine means direct tool costs can be reduced.

- Very tight workpiece surface finish tolerances can be achieved on difficult-to-machine materials.

- PCBN can be used to machine ferrous materials in the hardened condition as an alternative to grinding, making it possible to substantially reduce component machining times.

- PCBN offers environmental benefits — the generation of grinding sludge is eliminated and the chips can be recycled.

- Improved surface integrity of critical components.

B Boron

N Nitrogen

■ Grinding vs. Hard Turning

Grinding

- Size tolerance specifications beyond the capability of turning.
- Surface finish requirements too tight for hard turning.

vs.

Hard Turning

- Size tolerance specifications beyond the capability of turning.
- Complex geometry that makes single-point turning more practical.
- Relatively high metal removal rates.
- Dry machining.
- Faster machine setup.
- Faster cycle times.
- I.D. and O.D. machining on one machine.

■ Where does PCBN work?

PCBN is suitable for machining a wide variety of workpiece materials, mainly ferrous alloys.

The application areas may be broadly categorized as follows:

Hardened Steels	Cast Irons	Superalloys	Powder Metallurgy Steels
-----------------	------------	-------------	--------------------------

Certain classes of PCBN materials are associated with each particular application.

For best cost performance, proper selection of the following is essential:

- Format of the insert.
- Grade.
- Edge prep.
- Application data.

PCBN/PCD Inserts

■ PCBN is known as the second hardest material

There are two principal material conditions where PCBN is used.

■ PCBN insert formats

Solid Inserts

- Inserts are made only from PCBN.
- No material joint.
- Best heat absorption capacity.
- Can work at highest temperatures.

solid

Full-Face Inserts

- Inserts are made from a presintered carbide/PCD or PCBN joint.
- Elimination of the brazing joint. Less delamination.
- Better heat absorption capacity.
- Can work at higher temperatures than tipped tools.
- Facilitate larger depth of cut compared to the same size tipped insert.
- The blanks are available with “A” and “W” ISO-style pin-lock holes.

full-face

Tipped Inserts

- Require a carrier and substrate for the insert.
- The tips are brazed to the substrate. Various brazing methods are applied.
- The substrate has to have a pocket that will accommodate and support the tip.
- In these types of tools, the braze joint represents the weak link, so the brazing operation is very important and should be carefully controlled and executed.
- The main advantage of tipped tools over full-faced inserts is the lower cost.

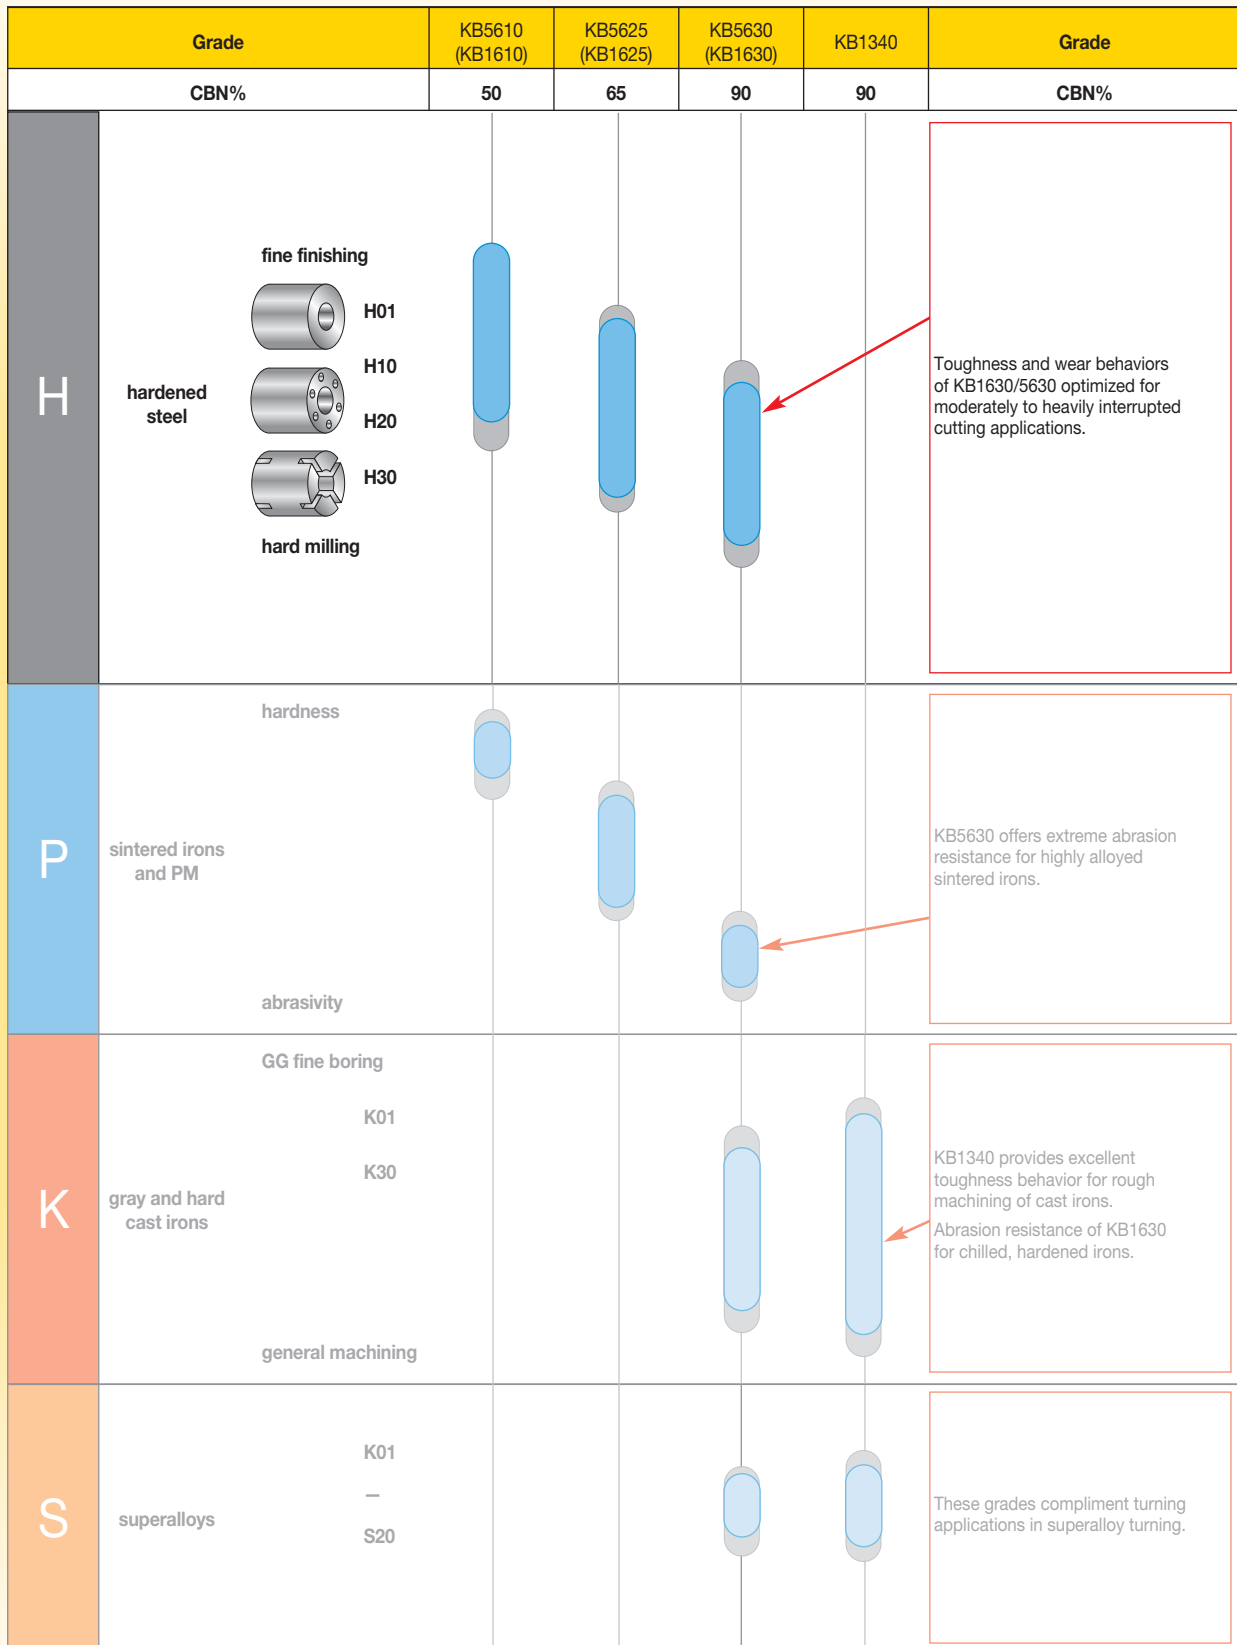

tipped

■ Kennametal inserts

This table shows approximate tip sizes of Kennametal CBN inserts depending on style and corner radius. Please note that the maximum cutting depth is not more than 80% of the tip length.

PCBN/PCD Inserts

PCBN Hard Turning Selection System

Introduction

This guide will help you choose the PCBN grade, edge preparations, nose radius, feed, and recommended speed range for your hard turning applications. These recommendations will establish a starting point for optimization of the application. Where possible, this guide will lead you to standard line items. If this is not the case, the items can still be obtained through the QTSP (Quick-Turn Solutions Program) or ordered as specials.

We will classify hard turning operations as any turning or boring of ferrous-based workpiece materials with a hardness (HRC) higher than 45. For workpieces with lower hardness values, PCBN is not recommended.

To use the guide, you will need this application information:

- Workpiece design: interruptions, shape, and frequency.
- Workpiece material specifications: hardness, superficial or through treatment, and carbide forming alloying elements (that increase the abrasivity of the material).
- Depth of cut.
- Surface finish requirements.
- Preset conditions, such as specific nose radius, limited feed, etc.
- Setup limitations related to machine tool, fixturing, etc.
- Tool life criteria, e.g., surface finish, dimensional tolerance, cutting force, etc.

PCBN Hard Turning • Selection System Overview

Step 1 • Choosing the PCBN Grade

Step 1, reference pages B144–B145.

Step 2 • PCBN Edge Preparation Features

Step 2, reference page B145.

Step 3 • Selection of T-Land Angle

Step 3, reference page B145.

Step 4 • Selection of T-Land Width

Step 4, reference page B146.

Step 5 • Choosing the Speed Range

Step 5, reference page B147.

Grade Selection for Hard Turning

How to Use

Identify your application conditions. The most far right parameter will then determine the recommended grade(s). If more than one grade is intersected, it is recommended to first select the grade with the highest toughness (page B139) before optimizing using the Troubleshooting Guide (pages B142–B143).

Step 1 • Choosing the PCBN grade

Depth of Cut (mm)

Larger depths of cut need stronger grades.

0.10 0.20 0.30 0.40 0.50 0.60 0.70

Continuous/Interrupted

More continuous cutting needs more crater wear resistance; more interrupts need more toughness.

Interruption Severity

The angle between the cutting direction and the edge of the interruption has a big influence on the severity of an interrupt impact.

Interruption Frequency

A wide spacing between interrupts emphasises crater wear resistance, whereas closer-located interrupts emphasise impact resistance.

KB5610™

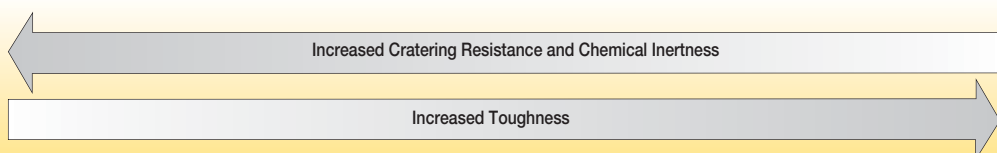

KB5625™

KB5630™

H10 H15 H20 H25 H30

ISO Class
Hard Turning

Tool Wear Type

(continued)

Step 1 • Choosing the PCBN grade (continued)

	cratering resistance	abrasive resistance	impact resistance	surface finish
KB5610™	***	*	*	***
KB5625™	**	**	**	**
KB5630™	*	***	***	**

*** = Best

Step 2 • PCBN edge preparation features

Edge Preparation Specifications		
E	hone only	0,020mm
S01015	$W \times \beta = 0,1\text{mm} \times 15^\circ$	
S01025	$W \times \beta = 0,1\text{mm} \times 25^\circ$	

R 0,020mm

W — Edge Prep Width
 α — Clearance Angle
 β — T-Land Angle

Nose Radius and Feed vs. Surface Roughness

Step 3 • Selection of T-land angle

How to Use

Using the grade selection and the Interruption Severity from Step 1, select edge preparation angle or hone only, E, from the table below. Solutions in parenthesis are second options.

Selection of Preparation Angle					
input from Step 1 ↓					
KB5610	E (15°/25°)	20°/25°	NA	NA	NA
KB5625	15°/25°	15°/25°	20°/25°	25°	NA
KB5630	15°/25°	15°/25°	20°/25°	25°	25°/35°

PCBN/PCD Inserts

Step 4 • Selection of T-land width

How to Use

Example 1: If the feed, depth of cut, and the tool nose radius are fixed, use these values to see what T-land width should be used.

Example 2: If you want to use a specific T-land width or hone only edge, use the chart below to see what maximum feeds and depths of cut are recommended for different nose radii.

*NOTE: Colored lines represent proven solutions; gray lines represent theoretically possible solutions.

Step 5 • Choosing the speed range

How to Use

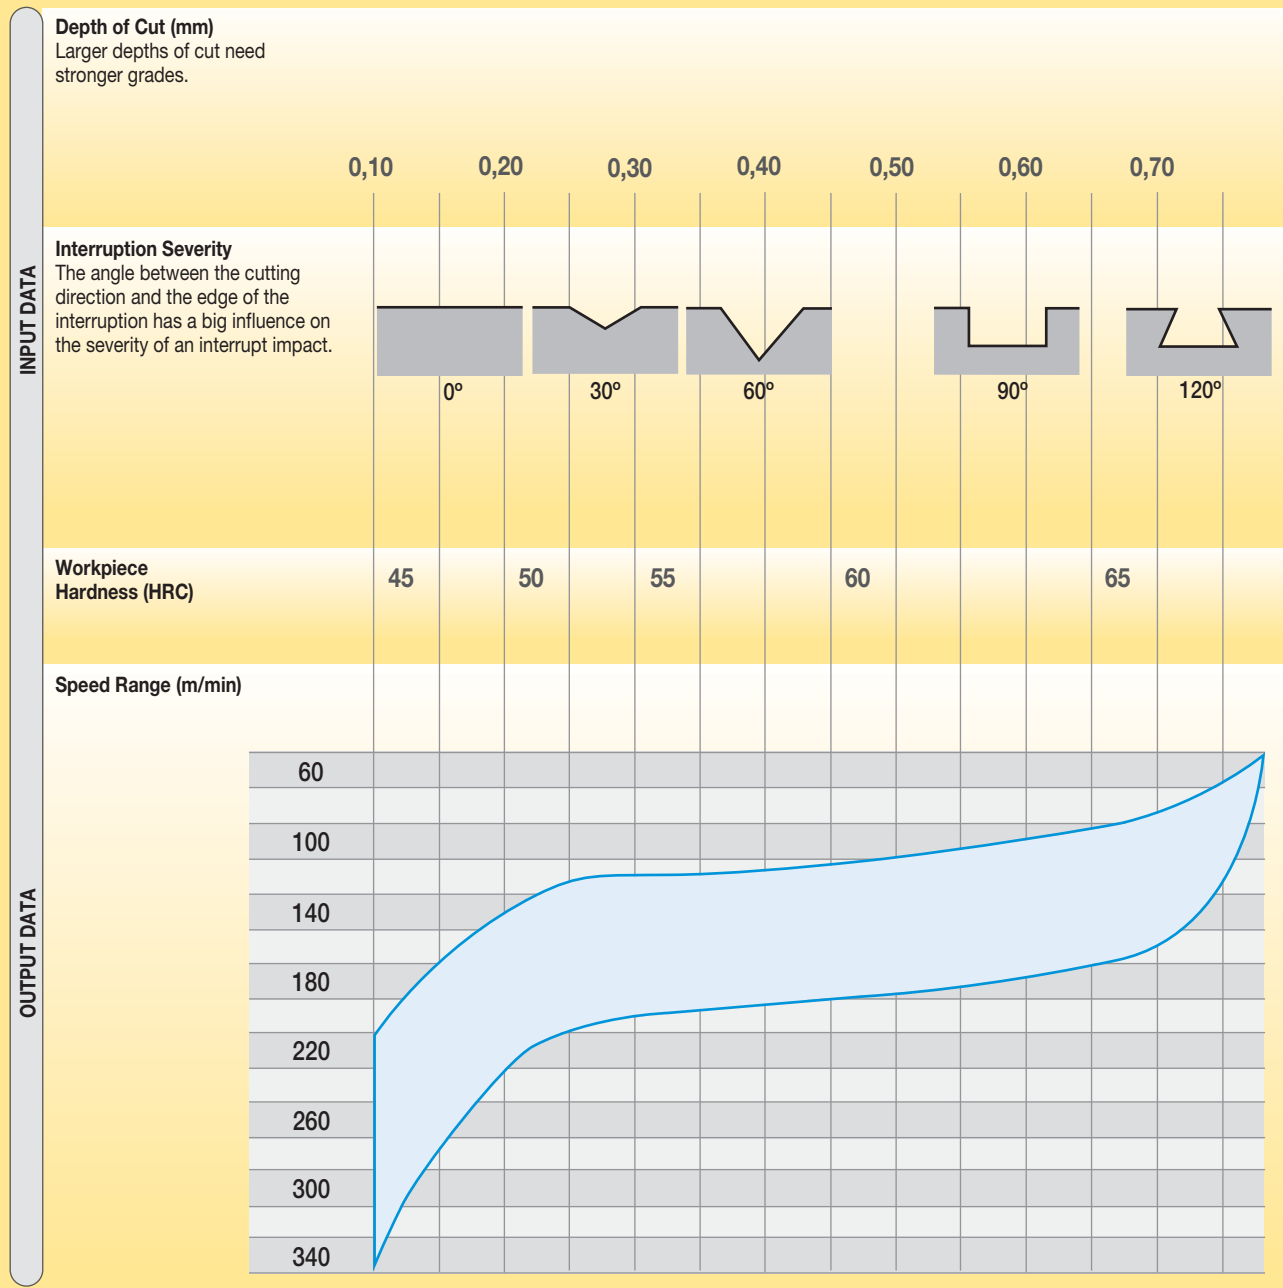

Using the application information, determine your position in the INPUT DATA table below and select the speed range area with which it intersects for each input parameter. If different speed ranges result, choose the lowest speed range.

The shaded area extends to the minimum and maximum speeds for the application. The suggested starting speeds can be taken as the minimum line of this range.

PCBN/PCD Inserts

Speed Range Selection for Hard Turning

CBN Inserts with Chipbreaker

For hardened steels, grinding is no longer the preferred method in finish turning operations because hard turning now drastically reduces cost per part. With high metal removal rates, faster machine setup, quicker cycle times, and greater flexibility, it is obviously the preferred method.

Despite these advantages, hard turning has sometimes had issues with poor chip control causing surface scratching and bird-nest formations. Kennametal solved these problems by integrating special chipbreaking geometries into two high-performance PCBN grades, giving customers total control of their hard machining.

Ideally, hardened steels are machined with a low or medium CBN content grade where the workpiece encounters few interruptions. However, because of CBN's structure, the industry had not been able to add chipbreaking technology to low content CBN inserts. KB5610™ with chipbreaker is, therefore, the first product of its type to deliver chipbreaking where it's most needed. KB5625™ with chipbreaker provides a chipbreaking solution for applications requiring more toughness.

Together, these tools give Kennametal customers industry-leading flexibility in choosing the right tool for the job.

Features

- Chipbreaker for improved chip control.
- KB5610 ideal grade for continuous operations.
- KB5625 ideal grade for continuous and interrupted operations.

Benefits

- Improved surface quality to reduce scrap rates.
- Reduction of machine stops due to swarf issues to improve machine availability.
- Reduction of bird-nest formation to reduce clean up time.
- Two grades to choose from for best performance.

	K30		

■ High content PCBN grades: KB1340™, KB1630™, and KB5630™

General Application Area

Continuous and interrupted machining of ferrous alloys where the main wear mode is abrasive and a strong edge is required.

Primary Target Workpiece Materials

- Gray cast irons.
- High Cr content irons.
- Chilled and hardened irons.
- Co-, Ni-, and Fe-based hard facing alloys.
- Other alloys in which there is a high concentration of carbide forming elements, and the primary wear is abrasive.

■ Machining gray cast iron

The largest application area for KB1340™ is machining of gray cast irons. Following are a few particulars of this application:

- GCI have to be machined dry. The application needs to generate high levels of heat in order to create a protective oxide layer on the tool.
- It is important to confirm with the customer that the GCI has been properly aged, and it has a sulphur content over 0.05%.
- The starting point for edge preparation should be .004" (0,10mm) x 20° for finishing (DOC <0,5mm) and .008" (0,20mm) x 20° for roughing.
- The edge preparation angle should increase if any interruptions are present, up to 35°.
- Lack of aging and/or low sulphur content can lead to a decrease in tool life of up to 10 times!
- A slow feed approach/engagement of the tool is recommended to minimize chipping and notching.

Proper application of KB1340 – formation of protective layer, tool life should exceed 70 km sliding distance.

Comparison of the life of PCBN cutting tools in machining two different gray cast irons, primarily differing in sulphur content.

High-content PCBN grades are intended for use in negative rake clamp-type toolholders, boring, recessing tools, and milling heads. Due to the dynamic loads that occur in the machining of hard ferrous materials and the conditions under which these grades operate, frequently involving shocks from interrupted cutting, it is advisable to strengthen the tool system as much as possible and use dimpled inserts where possible.

Dimple Clamps for Added Stability

Typical Application

Continuous cost pressures force manufacturers of gray cast iron brake disks to look for cost-cutting solutions. CBN inserts deliver high productivity and long tool life. Kennametal has developed the solid, high-content grade KB1340™, which provides superior performance when machining gray cast iron components, such as brake disks or fly wheels. To ensure secure seating in the toolholder, the inserts are available with dimple-design clamping. The clamps fit Ceramtec holders, which makes the conversion to Kennametal tooling easier.

Higher Productivity and Profitability

- Ensures tight and rigid clamping.
- Dimpled insert with special clamping provides increased stability in the pocket.
- Ideal for use in heavy-duty machining applications.
- Cladded clamps for improved resistance against chip wash are available upon request.
- The shallow dimple design enables the use of less expensive 3/16" (4,76mm) inserts.
- Round dimple design works with custom tooling where clamping direction must be offset due to space limitations.

Quick-Turn Solutions Program for CBN Inserts

Standard inserts incorporate latest grade, coating, edge preparation, and manufacturing technology. They cover a wide range of applications and provide superior performance.

However, in some cases, further fine tuning is needed to reach the optimum performance point. Therefore, Kennametal has set up the Quick-Turn Solutions Program (QTSP) to allow edge preparation modifications on selected styles, grades, and formats to further enhance the tool performance.

Technical Details • Options for a Customization

Teardrop (TD Edges) for Demanding Applications

Teardrop (TD) edges are advanced edge preparations used in heavily interrupted operations where standard edge preps fail. They can be ordered as specials.

Possible TD Edges

- W** – Edge Prep Width
- α – Clearance Angle
- β – Edge Prep Angle – between rake face and K-land

Edge Preparation Specifications			TD-Style Selection	
E	hone only	0,020mm		
W x β	width in 0,001mm x angle			
TDR	ellipse based on 0,25 x 30°			
TDF	ellipse based on 0,20 x 20°			
TDS	ellipse based on 0,10 x 20°			

■ PCD

The current global metalcutting climate has put increased focus on high productivity and cost reductions coming from cutting tools. These requirements lead to the rapid growth and implementation of cutting tools using superhard materials. As the name implies, these materials have a significant advantage in hardness over conventional tool materials, which from the end user point of view, translates into increased productivity (higher cutting speeds, longer tool life, etc.), lower tooling cost per part, and also, the ability to process materials previously un-machinable with conventional tooling.

The most widely known superhard materials are diamond and cubic boron nitride. Our industry uses the polycrystalline forms of these materials, i.e., polycrystalline diamond (PCD) and polycrystalline boron nitride (PCBN). PCD tooling is mainly targeted at the machining of non-ferrous materials (e.g., aluminum alloys, plastics, CFRPs, composites, titanium alloys, ceramics, carbides, etc.) whereas PCBN targets iron-based alloys (e.g., cast irons, hard steels, iron-based composites, etc.)

Kennametal is at the forefront of developing and implementing superhard materials in our standard and special tooling solutions across all our product lines. Kennametal's approach to superhard tooling starts with customer needs and constraints. We then use fundamental research to develop the best superhard solutions that would make available the best value for the customer and respond to their specific demands.

PCBN/PCD Inserts

■ Different kinds of PCD grades

Application demands determine the choice of cutting tool material. The important requirements of the material are:

- Abrasion resistance.
- Toughness and strength.
- Thermal behavior.

Fine Grain

Medium Grain

Coarse Grain

■ Comparison of different PCD grades

Behavior in Applications

Behavior in Applications

grade characteristics:	coarse grain	KD1425™	KD1405™
grain size:	25 μm	2–30 μm	0 μm
chip resistance:			
abrasion resistance:			

Chipping can be defined as the formation of small notches on the cutting edge and generally occurs when the load at the cutting edge exceeds the strength of the material. An A390 alloy was used in edge milling tests to assess the chip resistance of the different PCD grades.

Abrasion is characterized by the development of grooves and ridges on the flank of the tool in the direction of sliding. The abrasion resistance of PCD was evaluated on a high silicon aluminum alloy, A390, in a continuous cutting operation.

■ PCD grain size • Workpiece surface finish

This chart illustrates the influence of the PCD grain size on surface finish in turning 18% silicon aluminum alloys. The best finish is obtained with the submicron grade KD1400. While the grade KD1425 contains grains as large as 30 microns, this material's unique multimodal grain size distribution results in a microstructure of closely packed diamond grains resulting in a smoother ground edge.

■ KD1400 advantages at a glance • Summary

A sharper cutting edge

- Clean cuts on carbon fibers.
- Permits larger nose radii for increased feed and productivity without loss in finish.

A less serrated (smoother) cutting edge

- Improved surface finish — potentially reducing rough and intermediate honing.

Permits a more positive rake

- Reduced cutting forces, delamination, and burr formation.

Permits increased clearance

- Providing for lower tool wear rates and lower push-off forces — thereby improving process capability.

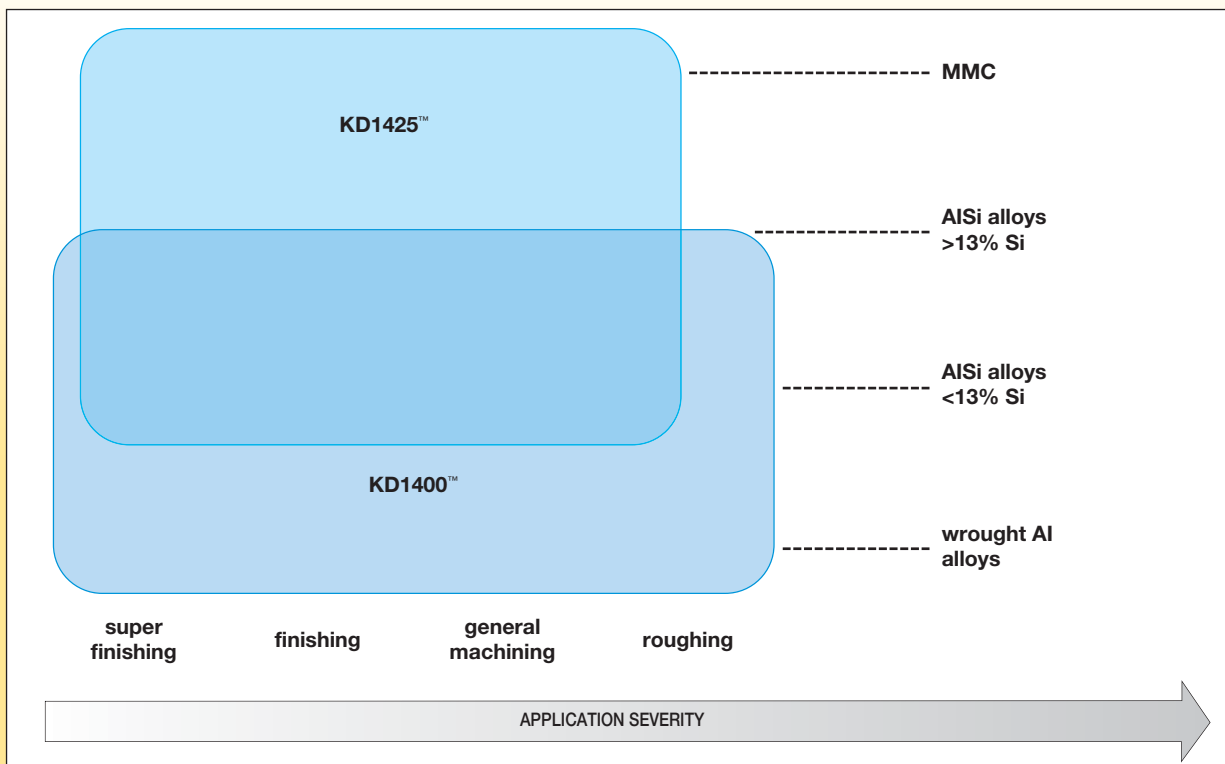

Provides unparalleled chip resistance

- Suitable for heavy milling and interrupted turning with positive edge geometries and longest tool life.

Comparable abrasion resistance to a coarse grade PCD

- Covers the widest range of applications with a single grade — reduce inventory and complexity.

■ PCD tool failure modes

The gradual wear observed on diamond cutting tools can be divided into:

- Mechanically activated wear (abrasion, adhesion, and wear by microfracture).
- Tribochemical wear (dissolution/diffusion wear and formation of new chemical compounds).

Abrasion

The primary mode of mechanically activated wear for diamond cutting tools is abrasion, which is the removal of tool material by a scoring action of protruding asperities and hard phase inclusions in the workpiece and chip (e.g., silicon grains in aluminum-silicon alloys).

Abrasion is characterized by the development of grooves and ridges in the direction of the tool sliding against a newly machined surface of the workpiece or chip sliding against the rake face.

The severity of abrasion can be increased in cases where the workpiece material contains hard inclusions or when there is hard wear debris from the workpiece or the tool at the interface.

Tribochemical

Tribochemical wear is particularly relevant in the machining of titanium alloys when the carbon in the tool material diffuses into the adhered titanium layer to form a TiC boundary layer on the rake face of the tool.

This boundary quickly becomes saturated with tool constituents and can then act as a protective barrier against any further diffusion.

Attrition

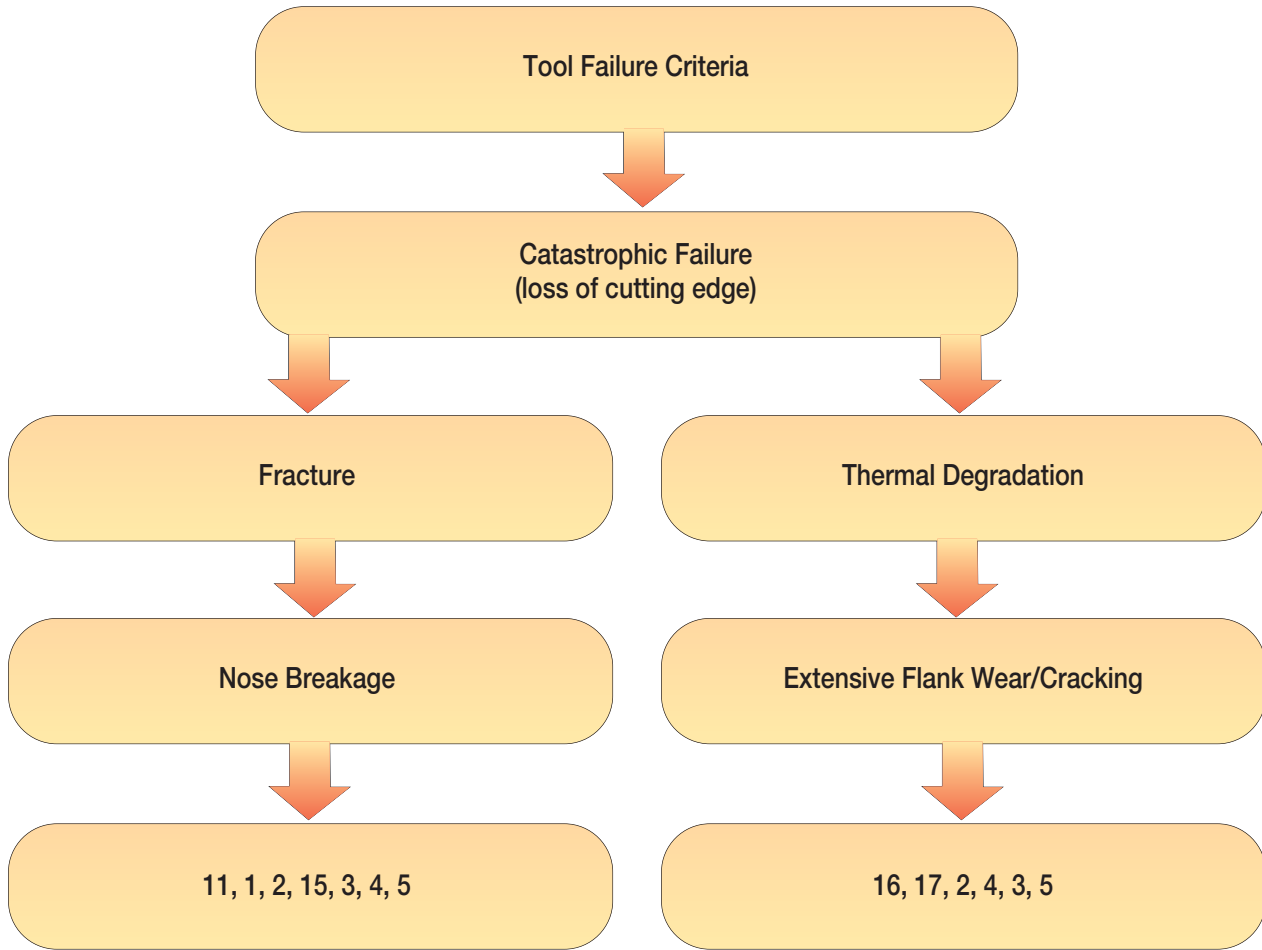

When two surfaces slide over each other, particularly in the absence of a lubricant, some adhesion can occur at the points of contact. Adhesive wear (often called attrition) in cutting tools involves the mechanism in which individual grains or small grain aggregates are pulled out of the tool surfaces and are carried away at the underside of the chip or are torn away by the adherent workpiece. The term “plucking” is also used to describe the loss of tool particles from the edge or faces. For example, when the forces are high enough, the TiC boundary layer that forms in titanium machining can be removed from the rake face of the tool transporting with it a pulled-out diamond grain, to form a crater. Once this crater becomes excessive, fracture of the tool could occur due to the geometrical weakening of the edge. Negative geometries tend to enhance the possibility of adhesive wear and built-up edge formation. Subsequent break-up (fracture) of the adhesive tool/workpiece joints results in attrition wear. The wear scars produced by attrition are rough, as opposed to the usually smooth wear surfaces generated by tribochemical wear.

Microfracture

When cutting tools are employed for continuous machining of high hardness materials or interrupted machining, small fractures can appear on the cutting edge. If fracturing is small, the cutting tool can usually still be used. Wear by microfracture involves a less severe form of fracture and includes chipping, spalling, and cracking whereby the cutting tool can be reused.

10. Increase lead angle.
11. Select a tougher grade.
12. Select more abrasion-resistant grade.
13. Select a higher TRS grade.
14. Choose a more chemically inert grade.
15. Increase thickness.
16. Select a more thermally stable grade.
17. Use coolant.

■ Machining of carbides with superhard

material machined	operation	PCD grade	speed				feed rate				DOC			
			m/min		SFM		mm/rev		in/rev		mm		in	
			min	max	min	max	min	max	min	max	min	max	min	max
tungsten carbide <19% Co

sintered	turning	KB1340	30	100	99	330	0,1	0,4	0,004	0,016	0,1	0,5	0,004	0,020

Application Notes

- PCD tools should be used with a neutral geometry and 7° clearance.
- PCD edge preparation should be either F or E. An E edge preparation is preferred for larger DOCs, low Co content, and interrupted machining.
- PCBN tools should be used in a negative geometry with 5° to 7° negative rake.
- PCBN edge preparation should be either E or S01025.
- Coolant application is recommended and very important, especially with PCD application where failure is determined by heat generation.
- PCD can also be applied for Co concentrations higher than 19% as long as minimal heat is generated.

■ CGI boring with turning insert

Machining Parameters

- Feed = 0,1mm (.0038")
- Depth of cut = 0,25mm (.0098")

Tool Life Criteria

- VB max = 0,3mm (.0098")
- Number of bores = 1500

Clamping Styles

Kenclamp Style

- Suitable for Kenloc inserts.
- Unique clamp design provides rigid clamping.
- Ensures insert repeatability and seating.
- Reduced chatter and improved tool life.

Kenloc Style

- Suitable for Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without clamp.

Top Notch™ Turning Style

- Proven superior system in holding ceramic inserts rigidly in turning and profiling operations.
- Uses standard insert sizes — 80°, 75°, 55°, square, and trigon.
- This system offers the added versatility of using optional hardware to hold standard Kendex and Kenloc inserts.

Kendex Style

- Suitable for Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.

Screw-On Style

- Top clamping by screw for Screw-On inserts.

Wedglock Style

- Top and hole clamping for inserts with hole.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

O.D./I.D. Tooling

M

Insert Holding Method

C

Insert Shape

L

Tool Style or Lead Angle

N

Insert Clearance Angle

R

Hand of Tool

R = Right hand

L = Left hand

N = Neutral

Additional Information

C = Deep pocket for ceramic insert

S = Single pocket locating wall

F = Straight shank, no offset

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

MCLNR164D

1

Shank Dimensions

The 7th and 8th position shall be a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and over, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero.

For rectangular holders, the first digit represents the number of eighths of width "B" and the second digit the number of quarters of height "H", except for a toolholder 1-1/4" x 1-1/2" which is given the number 91.

6

Shank Dimensions

4

Insert Size

Insert IC
Number of 1/8ths if "D"

D

Qualified Surface and Length

Additional Information

- R** = Radial clearance for 4" minimum bore
- S** = 3.00 minimum bore
- KC** = Kenclamp™
- H4** = Wedglock™ clamping system
- M..** = TNT/MTS clamping system for ceramic and PCBN inserts

Insert Thickness (optional)

- 3** = .188"
- 4** = .250"

O.D./I.D. Tooling

Qualified Surface and Length

- A** = Qualified back and end, 4" long
- B** = Qualified back and end, 4.5" long
- C** = Qualified back and end, 5" long
- D** = Qualified back and end, 6" long
- E** = Qualified back and end, 7" long
- F** = Qualified back and end, 8" long
- G*** = Qualified back and end, 5.5" long
- H*** = Qualified back and end, 5.625" long
- I*** = Qualified back and end, 3" long
- J*** = Qualified back and end, 5.3" long
- K*** = Qualified back and end, 14" long
- L*** = Qualified back and end, 6.8" long
- M** = Qualified front and end, 4" long
- N** = Qualified front and end, 4.5" long
- P** = Qualified front and end, 5" long
- R** = Qualified front and end, 6" long
- S** = Qualified front and end, 7" long
- T** = Qualified front and end, 8" long
- U*** = Qualified front and end, 5.5" long
- V*** = Qualified back and end, 3.5" long
- W*** = Qualified front and end, 3.5" long
- Y*** = Qualified back and end, 3.75" long
- Z*** = Qualified back and end, 3.250" long

*Kennametal standard only.

See page B40–B44 for inserts.

Beyond BLAST™ • The First Through-Insert Coolant Delivery System from Kennametal

That's **Beyond BLAST™** 
That's **Different Thinking.**

We didn't just improve metalcutting technology. We reinvented it.

Introducing Beyond BLAST, a revolutionary insert platform that delivers many of the benefits of high-pressure systems at conventional coolant pressures. Advanced coolant-application technology makes cutting more efficient and effective — while extending tool life. This tool is specifically designed for titanium and other high-temp alloys.

Higher Productivity, Extended Tool Life

- Increased tool life up to 300%, depending on the insert geometry and cutting conditions.
- Significant productivity and tool life increase in titanium machining.
- Higher metal removal rates and reduced cycle time.
- Chipbreaker design in combination with PCT provides excellent chip control and workpiece finish.

Versatility

- Ideal for applications where productivity or tool life is limited due to excess heat generated.
- Offered as a standard item with engineered solution capabilities.
- Provides increased performance with high-pressure or low-pressure coolant delivery systems.

Clamping Styles

Kenclamp Style

- Suitable for Kenloc inserts.
- Unique clamp design provides rigid clamping.
- Ensures insert repeatability and seating.
- Reduced chatter and improved tool life.

Screw-On Style

- Top clamping by screw for Screw-On inserts.

Top Notch™ Turning Style

- Proven superior system in holding ceramic inserts rigidly in turning and profiling operations.
- Uses standard insert sizes — 80°, 75°, 55°, square, and trigon.
- This system offers the added versatility of using optional hardware to hold standard Kendex and Kenloc inserts.

Kenloc Style

- Suitable for Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without clamp.

Kendex Style

- Suitable for Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

O.D./I.D. Tooling

	A Bar Type	32 Bar Diameter		M Insert Holding Method	C Insert Shape
A	 Steel bar with coolant	Inch: A two-digit number indicates the bar diameter in 1/16" increments	3 = F 3.5 = G 4 = H 4.5 = J 5 = K 5.5 = L 6 = M 6.5 = N 7 = Q 8 = R 10 = S 12 = T 14 = U 16 = V 18 = W 20 = Y	C Kendex™	A
S	 Steel bar without coolant			N Top Notch™ Profiling	B

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
 For more information, please visit www.kennametal.com/carbiderecycling.

Cartridges

Primary Application

Modern machining operations demand high-quality, high-performance toolholders that provide straightforward design and application versatility.

Standard Kennametal cartridges are ideal for turning tools with one, or several, cutting edges. A wide range of cartridge sizes and styles provide numerous combinations and application possibilities.

Features and Benefits

Kenloc™ Style (M-Clamping)

- Used for Kenloc inserts.
- Lock pin and top clamp provide rigid clamping.
- Wide variety of insert styles may be used.
- Tools may be used with or without top clamp.
- Optional hardware available for thicker inserts.
- Extreme sturdy clamping system, specially designed for interrupted cuts.
- Tool is protected by a carbide shim.

Kenlever™ Style (P-Clamping*)

- Proven superior system for holding ceramic inserts rigidly in turning and profiling operations.
- Can be used on Kendex or Kenloc inserts using optional hardware.
- Lever-type clamping system for negative indexable inserts with hole to DIN 4988 and positive round inserts more than 20mm in diameter.
- Inserts with one- and two-side chip control geometries have positive rakes from 6–18°.
- Advantages include fast insert changes and no interference with chip flow.

*NOTE: P-style available in metric sizes only.

Kendex™ Style (C-Clamping)

- Suitable for Kendex inserts.
- Chipbreaker option available for ceramic inserts.
- Wide variety of insert styles may be used.
- Top clamping system for negative and positive indexable inserts to DIN 4968.
- Universal clamping system is robust and easy to handle.
- Some height-adjustable clamps enable the use of additional chipbreakers.
- Carbide shim provides additional tool protection.

Screw-On Style (S-Clamping)

- Used for Screw-On inserts.
- Top clamping by screw.
- Screw clamping system for positive indexable inserts with countersunk hole to DIN 4967.
- Compact design using a minimum of spare parts for high reliability and cost efficiency.
- Toolholders with cutting edge heights greater than .625" (16mm) and insert ICs from .375" (9,52mm) are secured by a threaded bushing.
- Carbide shim provides additional tool protection.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

O.D./I.D. Tooling

M

Insert Holding Method

Kendex™

Top Notch™ Profiling

Kenloc™

Screw-On

C

Insert Shape

L

Tool Style or Lead Angle

N

Insert Clearance Angle

R

A2™ Cut-Off			

Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

Grooving and Cut-Off

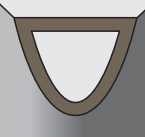

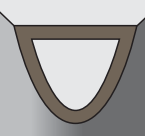

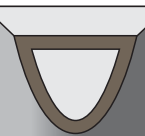

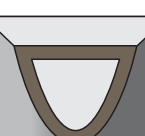

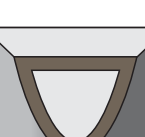

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45	
K68 C3	<p>Composition: A hard, low binder content, unalloyed WC/Co fine-grain grade.</p> <p>Application: The K68 grade has excellent abrasion resistance for machining cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and as an alternative to the K313 grade on most high-temp alloys. Use as a general-purpose grade for non-ferrous materials.</p>	M									
		K									
		N									
		S									
K313 C3-C4	<p>Composition: A hard, low binder content, unalloyed WC/Co fine-grain grade.</p> <p>Application: Exceptional edge wear resistance combined with very high strength for machining titanium, cast irons, austenitic stainless steels, non-ferrous metals, non-metals, and most high-temp alloys. Superior thermal deformation and depth-of-cut notch resistance. The grain structure is well controlled for minimal pits and flaws, which contributes to long, reliable service.</p>	M									
		K									
		N									
		S									
KT315 C3, C7	<p>Composition: A multilayered, PVD TiN/TiCN/TiN-coated cermet turning grade.</p> <p>Application: Ideal for high-speed finishing to medium machining of most carbon and alloy steels and stainless steels. Performs very well in cast and ductile iron applications too. Provides long and consistent tool life and will produce excellent workpiece finishes.</p>	P									
		M									
		K									
K1025 (KMF) C2, C6	<p>Composition: Medium in hardness and binder content unalloyed WC/Co fine-grain grade.</p> <p>Application: For machining high-temp alloys, titanium, and non-ferrous workpiece materials under unfavorable conditions.</p>	N									
		S									
KCP10 C3, C7	<p>Composition: A specially engineered cobalt-enriched carbide grade with thick MTCVD-TiCN-Al₂O₃ coating for maximum crater-wear, deformation, and abrasion resistance for high-speed machining.</p> <p>Application: An excellent finishing to medium machining grade for a variety of workpiece materials including most steels, ferritic and martensitic stainless steels, and cast irons. The smooth coating provides good resistance to edge build-up and microchipping and produces excellent surface finishes.</p>	P									
		M									
		K									
KCP25 C2-C3, C6-C7	<p>Composition: A tough cobalt-enriched carbide grade with a newly designed multilayer MTCVD-TiCN-Al₂O₃ coating with superior interlayer adhesion.</p> <p>Application: General-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance along with excellent insert edge strength. Coating layers offer wear resistance and the post-coat treatment minimizes microchipping and improves coating adhesion to the substrate for long tool life.</p>	P									
		M									
		K									

Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

Grade	Coating	Grade Description	area of use																					
			05	10	15	20	25	30	35	40	45	standard designation												
KCU10	 C3-C4	<p>Composition: An advanced multilayer PVD coating over a very deformation-resistant unalloyed carbide substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities.</p> <p>Application: The KCU10 grade is ideal for finishing to general machining of most workpiece materials at a wide range of speed and feed capabilities. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys with improved edge toughness and higher cutting speed/feed capability.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					
KC5010	 C3-C4	<p>Composition: An advanced PVD TiAlN coating over a very deformation-resistant unalloyed carbide substrate.</p> <p>Application: The KC5010 grade is ideal for finishing to general machining of most workpiece materials at higher speeds. Excellent for machining most steels, stainless steels, cast irons, non-ferrous materials, and super alloys under stable conditions. It also performs well machining hardened and short chipping materials.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					
KC5510	 C3-C4	<p>Composition: An advanced PVD TiAlN-coated fine-grain tungsten carbide grade.</p> <p>Application: The KC5510 grade is specifically engineered for the productive machining of high-temp alloys. The fine-grained tungsten carbide 6% cobalt substrate has excellent toughness and deformation resistance while the advanced PVD coating enables metal cutting speeds double those of conventional PVD-coated cutting tools.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					
KCU25	 C2, C6	<p>Composition: An advanced PVD grade with hard AlTiN coating and ultra-fine-grain unalloyed substrate. The new and improved coating improves edge stability with wide range speed and feed capabilities.</p> <p>Application: The KCU25 grade is ideal for general machining of most steels, stainless steels, high-temp alloys, titanium, irons and non-ferrous materials, in a wide range of speeds and feeds, with improved edge toughness for interrupted cut and high feed rates.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					
KC5025	 C2, C6	<p>Composition: An advanced PVD TiAlN-coated grade with a tough, ultra-fine-grain unalloyed substrate.</p> <p>Application: For general-purpose machining of most steels, stainless steels, high-temp alloys, titanium, irons, and non-ferrous materials. Speeds may vary from low to medium and will handle interruptions and high feed rates.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					
KC5525	 C2-C6	<p>Composition: Advanced PVD TiAlN-coated fine-grain high-cobalt carbide grade.</p> <p>Application: The KC5525 grade utilizes the same advanced PVD coating as the KC5025 grade in conjunction with a fine-grained tungsten carbide 10% cobalt substrate. The higher cobalt enables added security in interrupted cuts while the fine-grained WC maintains hardness-resisting deformation at higher speeds. Designed for medium to heavy interruptions in high-temp alloys.</p>	P																					
			M																					
			K																					
			N																					
			S																					
			H																					

Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

Grooving and Cut-Off

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
 KC5410 C3-C4	<p>Composition: PVD TiB₂ coating over a thermal deformation-resistant unalloyed substrate.</p> <p>Application: The KC5410 grade is designed for roughing, semi-finishing, and finishing of free machining (hypoeutectic <12.2% Si) aluminum, aluminum alloys, and magnesium alloys. Harder than TiN and TiAlN coatings, TiB₂ has an extremely smooth surface for improved surface friction, chip flow, and wear and built-up edge resistance. Unalloyed and fine-grained offering sharp edges and excellent edge integrity. Inserts with a ground periphery are polished before coating; molded inserts have a light hone.</p>									
		N								
 KC9110 C3, C7	<p>Composition: Specially engineered, cobalt-enriched carbide grade with thick K-MTCVDTiCN coating layer, an Al₂O₃ layer of controlled grain size, and outer layers of TiCN and TiN for maximum abrasion and wear resistance for high-speed machining.</p> <p>Application: An excellent finishing to medium machining grade for a variety of workpiece materials including most steels, ferritic and martensitic stainless steels, and cast irons. A balanced combination of deformation resistance and edge toughness. The smooth coating resists built-up edge and microchipping. For rougher cutting, use the KC9125 grade.</p>	P								
		K								
 KC9125 C2-C3, C6-C7	<p>Composition: A tough cobalt-enriched carbide grade with a newly designed multilayer K-MTCVD TiCNAl₂O₃-TiCN-TiN coating with superior interlayer adhesion.</p> <p>Application: General-purpose turning grade for most steels and ferritic and martensitic stainless steels. The substrate design ensures adequate deformation resistance along with excellent bulk toughness and insert edge strength. Coating layers offer wear resistance over a wide range of machining conditions and reduce frictional heat, minimize microchipping, and improve workpiece surface finishes. Performs well in moderately heavy roughing to semi-finishing cuts. Use the KC9110 grade for finishing cuts.</p>	P								
		K								
 KC9320 C3-C4	<p>Composition: A proprietary specially toughened MTCVD-TiCN and Al₂O₃ coating over a wear-resistant substrate.</p> <p>Application: KC9320 is specifically engineered to maximize coating adhesion and edge strength making this grade ideal in wet interrupted cutting of ductile and gray irons. It can be in a wide range of applications from finishing to roughing to maximize productivity wherever strength and reliability are needed.</p>	P								
 KY3500 C2	<p>Composition: Pure silicon nitride grade.</p> <p>Application: Maximum toughness; used at high feed rates for rough machining of gray cast iron, including machining through interruptions.</p>	K								
 KD1400 C4	<p>Composition: An ultra-fine-grain polycrystalline diamond (PCD) tip brazed onto a carbide substrate.</p> <p>Application: Designed for general-purpose turning of primarily non-ferrous materials. It can be applied over a wide range of continuous to interrupted cuts where superior surface finish is needed. Use on low to medium silicon-content aluminum alloys, non-metallics, copper, and brass- and zinc-based alloys. The ultra-fine-grain diamond particle size enables superior surface finishes while ensuring the best mechanical shock resistance of any PCD cutting tool.</p>	N								
		S								

Reduce cycle times. High speed and feed capability. Long tool life. New multilayer coating provides better wear resistance.

Grade	Coating	Grade Description	area of use										
			05	10	15	20	25	30	35	40	45		
KD1405		Composition: A pure CVD deposited diamond sheet tool directly brazed to a carbide substrate. Application: The KD1405 grade is Kennametal's and the industry's most abrasion-resistant tool material for non-ferrous and non-metallic materials. The KD1405 grade inserts are not as tough as the KD1400 and KD1425 grades but can withstand moderate interruptions when turning and traditional face milling operations.											
	C4		N										
KB1630		Composition: A high CBN content, PCBN tip brazed onto a carbide insert. Application: The KB1630 grade is designed for roughing to finishing in interrupted cuts on hardened steels (>45 HRC). It can also be applied on gray cast iron, chilled irons, high-chrome alloyed steels, and sintered powdered metals. The tipped PCBN insert is available in a wide range of insert styles including positive rake geometries that are ideally suited for boring applications.											
	—		K										
			S										
KB5625		Composition: A PVD TiAlN coating over a low content, PCBN tip brazed onto a carbide insert. Application: Designed for roughing to finishing of hardened steels (>45 HRC). Use on bearing steel, hot and cold work tool steels, high-speed steels, die steels, case hardened steels, carburized and nitrided irons, and some hard coatings.											
	C4, C8		H

A2™ Cut-Off • High-Performance Tools to Maximize Productivity!

The A2 platform is the ideal system for parting operations on a wide variety of workpiece materials. It works well in smooth and interrupted cuts in both wet and dry operations. Now it is available in KCU25™ for superior edge toughness and excellent wear resistance.

Features and Benefits

Innovative A2 Insert Design

- V-prisms on both top and bottom enable higher clamping force to prevent insert movement, even when cutting at high-feed rates.
- The cutting edge has a molded-in chipbreaker ramp to direct chips away from the blade, extending blade life.
- Positive rake cutting action combined with Kennametal's high-performance PVD coatings result in superior tool life and chip control.

A2™ Insert Stop Design

- As cutting forces increase, clamping forces also increase for secure holding power.
- Fixed insert stop ensures solid seating with every index and delivers up to 30% longer life.
- Cutting height is accurately controlled for maximum reliability and performance on even small-diameter parts.

Quick and Easy Insert Indexing

- A convenient indexing wrench is available to minimize downtime by enabling fast removal and insertion without damage to the cutting edge.

Step 1 • Select insert width and holder type

blade height	
19mm	
26mm	
32mm	
52mm	
Integral Shank Toolholders	

What you need to know:

- Cut-off diameter.
- Part/machine requirements.

For required cut-off diameter, select insert width and holder type based on the part and machine requirement:

- To maximize rigidity, select the largest possible blade height or an integral shank toolholder.
- Diameters shown are for cut-off to center. Maximum cut-off depth to a through-hole depth is one half of the diameter.
- To determine depth capability for cut-off to a through-hole on integral shank or reinforced blades, please refer to listing for that tool in this catalog.

Toolholder Type

blade: (self-clamping)	blade: (self-clamping, reinforced version)	toolholder: (with clamping screw)
	 Available in 26mm and 32mm heights	
<ul style="list-style-type: none"> • Frequently used tool. • Two insert seats. • Deepest depth-of-cut capability. 	<ul style="list-style-type: none"> • Efficient tooling solution with improved stability. • Limited depth-of-cut capability. 	<ul style="list-style-type: none"> • Shank tool with the highest stability. • Limited depth of cut. • Single insert seat.

Step 2 • Select the insert lead angle

- Part type.
- Burr and center stub considerations.
- Cut-off to center or through hole.

	neutral (0°)	right/left 6-10°	right/left 15-16°
insert type			
recommended application	<ul style="list-style-type: none"> • For cutting off solid workpieces. • Center stub will form on cut-off part. • Eliminates lateral deflection. • Best for deep cut-off depths. 	<ul style="list-style-type: none"> • For cutting off solid workpieces with reduced formation of center stub. • For cut-off to a through-hole with reduced burr. 	<ul style="list-style-type: none"> • For thin-walled workpieces. • For cutting off small diameter workpieces with minimal burr or center stub.
tool life	Best tool life	Better tool life	Good tool life

Step 3 • Select chipbreaker style and feed rate

- Lead angle or neutral insert.
- Workpiece material.

-CL Cut-Off Low Feed	-CF Cut-Off Fine	-CM Cut-Off Medium	-CR Cut-Off Rough
<ul style="list-style-type: none"> • Excellent chip evacuation in low feed applications. • Offers improved stability and rigidity in difficult-to-control applications. 	<ul style="list-style-type: none"> • Cut-off insert with precision ground cutting edge for low feeds. • Curved cutting edge. 	<ul style="list-style-type: none"> • Cut-off insert with precision molded cutting edge for medium feeds. • Stabilized straight cutting edge. 	<ul style="list-style-type: none"> • Cut-off insert with precision molded cutting edge for higher feed rates. • Curved cutting edge.

With more than 140 insert line items in four grades and four chipbreaker styles, Kennametal offers a complete line of inserts designed to productively handle any cut-off application.

TG&C • The Latest Metalcutting Innovations

Our latest metalcutting innovations are designed to deliver higher productivity, longer tool life, and increased application versatility.

A2™ — Cut-Off

- The cutting edge has a molded-in chipbreaker ramp to direct chips away from the blade, extending blade life.
- Fixed insert stop ensures solid seating with every index and delivers up to 30% longer life.

A3™ — Deep Grooving

- Designed for deep grooving.
- Reach deeper depths while maintaining chip control and tool rigidity.

A4™ — Groove and Turn

- One tool for turning, facing, grooving, face-grooving, and cut-off in O.D. and I.D. applications — that means exceptionally fast cycle times, no turret indexes!
- Precise insert positioning is ensured — for accurate cuts!

Top Notch™

- Rigid clamping securely locks insert in place through the toughest cuts.
- Chip control inserts provide excellent chip evacuation in grooving and offer better chip control in multi-directional turning.

NOTE: Assembly wrench 170.137 and 170.130 must be ordered separately.

170.130 is designed for the larger cutting widths size 4-6. It has two small pins on one side — these are designed to remove the insert only.

On the opposite side, there is a large pin and a rotating tang — these are designed to assemble the insert into the pocket.

The large pin and tang are a better design for assembling the larger inserts because the smaller insertion pins will bend or break if used repeatedly for assembly.

170.137 is designed for the smaller widths below 4mm. It has only the two small pins that are used for both assembly and removal.

When using the smallest 1,4mm and 1,6mm cut-off blades, please note that the wrench can only be used to remove the insert.

The insert must be installed by tapping the edge of the insert with a plastic hammer.

Definitions and Guidelines

1. Width of cut (W) = width of the insert.
2. Lead angle = 0° (neutral); 4°, 5°, 12°, 18° (RH or LH).

Reduce burr of cut-off faces:

- Use lead angle-type inserts (Figures 1 and 2). Lead angle on a cut-off insert reduces the burr that remains on the part but decreases tool life and increases tool-side deflection and possibly cycle time.

Figure 1
Insert selection **left-hand lead**

Left-hand lead insert leaves center stub or burr on part and produces clean stock surface.

Figure 2
Insert selection **right-hand lead**

Right-hand lead insert leaves center stub or burr on stock and produces clean part surface.

- Check total height and maintain on center with part diameter.
- The cutting edge height should be within $\pm .004"$ ($\pm 0,1\text{mm}$) to the center; recommended cutting position is $.002"$ ($0,05\text{mm}$) above center.

Figure 3
Above center

- If 0° lead angle is mandatory, use the narrowest possible cut-off insert and blade. This will minimize the center stub or cut-off burr length. Decrease the feed rate to maximum $.002"$ ($0,05\text{mm}$) or less at the point where diameter equals insert width.

Figure 4
Internal chamfer line up

- On tubing-type parts that require a chamfer on the ID, align ID chamfer tool with cut-off surface. This will enable the chamfering operation to actually separate the part from the bar (see Figure 4). Note the part may drop onto the chamfering bar, which, in this case, will act like a catcher for the part.

Improve surface finish of cut-off faces:

- Use insert with 0° lead angle.
- Increase coolant flow or improve application technique, as shown in Figure 5.
- Decrease the feed rate near the break-through point of the cut.
- Check that the grooving tool is set at the correct angle.
- Use blades with the greatest possible face height and smallest possible cutting width.
- Increase the speed.

Figure 5
Preferred method for applying coolant

- Mount cut-off tool upside down. This enables gravity to remove chips and avoid cutting the chips twice. Another benefit of mounting the tool upside down is preventing chips from wedging between the tool insert and the groove side walls, which galls the side wall surfaces.

A3™ Deep Grooving Is the Best Choice for High Productivity — with Outstanding Application Flexibility!

Primary Application

The A3 System is designed specifically for deep grooving operations. The A3 platform enables customers to reach deeper depths while maintaining chip control and tool rigidity.

Features and Benefits

Performance

- One insert performs:
 - O.D. operations
 - I.D. operations
 - Face grooving operations
- In addition, the A3 system's performance is enhanced by:
 - Beyond™ CVD grades
 - The Beyond Tooling Selection System

Compatibility

- A3 deep grooving tooling is compatible with square shank, KM™, and Kennametal Capto® platforms.

Step 1 • Select system based on the groove depth required

What you need to know:

- Groove depth, width, and profile.
- Material to be machined.
- Application to be performed (face, O.D., or I.D. grooving).
- Toolholder requirements (e.g., KM™, square shank, right/left).

Top Notch™

Grooving

For grooving depth $\leq 1.5x$ grooving width, see Top Notch grooving, page D122.

A3™ or A4™

Deep Grooving

For grooving depth $\geq 1.5x$ grooving width, proceed to Step 2 for the A3 Deep Grooving program or see A4 Grooving and Turning program on page D70.

A3 Deep Grooving for Deep Internal, External, and Face Grooving Applications

System Capabilities

groove	min	max
width	.087" (2,25mm)	.397" (10,05mm)
depth	—	1.260" (32mm)

Face grooving diameter range .984" (25mm) to ∞

Step 2 • Select toolholder based on the application

NOTE: Toolholders are available as conventional square shank versions as well as quick-change versions. Please select equal seat sizes for the insert and the toolholder.

- I.D. grooving applicationssee page D44
- Face grooving with integral square shank toolholderssee page D38
- O.D. grooving with integral square shank toolholderssee page D34
- Face and O.D. grooving with modular toolholderssee pages D46–D60

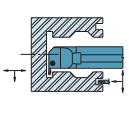

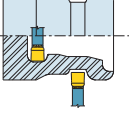

Step 3 • Select chipbreaker style and feed rate

DF — Deep Finishing	DM — Deep Medium	DR — Deep Roughing

(continued)

(continued)

Chipbreaker and Feed Rates • in/rev (mm/rev)

	—	—	—	KMF 60-200 (200-650)	KMF 10-30 (35-100)	—

*NOTE: PCBN-tipped inserts in KB5625 are available on request.

Step 5 • Select insert and holder from catalog page

NOTE: The insert seat size and cutting width must match the seat size and cutting width of your toolholder selection.

Example for A3 • Deep Grooving

Material.....low-alloyed steel
 Groove depth5" (12mm)
 Groove width250" (6,35mm)
 Smooth cut

Recommendation

InsertA3G250I06P1DF
 GradeKC5010
 Insert width250" (6,35mm)
 Insert seat size6

Toolholder.....A3SML2525M0616
 Grooving depth..... .630" (16mm)
 Seat size2

Congratulations!

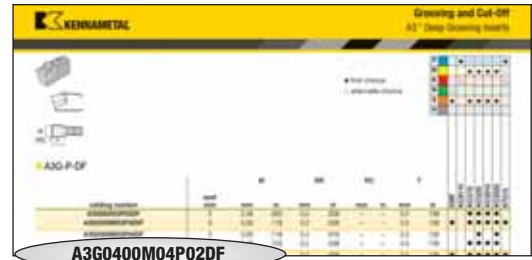

You have successfully maximized your productivity by selecting the best A3 insert geometry, grade, and cutting specifications for your application!

Speed: 570 SFM (180 m/min)
 Feed: .008 in/rev (0,15 mm/rev)

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

A3G0400M04P02DF

Grooving and Cut-Off

A3

Type of Program

A3 = Deep Grooving

G

Insert Style

G = Square
R = Full radius
V = V-style 35°

0400

Groove Width

Expressed in .001" or 1/100mm
0000 for V shape

M

Units

I = inch
M = metric

04

Insert Size

03
(*)3S
04
(*)4S
05
06
08
10

P

Insert Tolerance

P = Precision ground
grooving width tolerance:
±.001" (0,025mm)

U = Utility molded
grooving width tolerance:
3,05-4,05: $\frac{+.006''}{-0}$ $\frac{(+0,15\text{mm})}{-0}$
5,05-10,05: $\frac{+.010''}{-0}$ $\frac{(+0,25\text{mm})}{-0}$

02

Corner Radii

inch	metric
0	01
05 = .008	02
1 = .016	04
2 = .032	08
3 = .047	12
4 = .062	16

full radius = 00

DF

Chipbreaker

DF = Deep Finishing
DM = Deep Medium
DR = Deep Roughing

(*) 3S/4S designates a small size insert for face grooving of small diameters.

Screw-Clamping Holder Options

Both A2™ and A3 inserts are designed to fit all A3-style holders.

Example:
A3SCR -1603-26

circular clearance

C-style reinforced maximum support toolholder with circular clearance:

- Provides maximum support for cut-off operations.
- For cut-off to center or small through-hole applications.
- Ideal for A3 deep grooving operations as well.

Example:
A3SSR-1605-26

straight clearance

S-style standard support toolholder with straight clearance:

- Provides maximum flexibility.
- Unlimited diameter capability for cut-off to through-hole applications.
- Narrower support blade width allows full insert width flexibility for A3 deep grooving operations.
- Straight clearance is also available in selected M-style maximum support integral shank and modular toolholders.

NOTE: Seat size 4 inserts can be used in seat size 3 and 4 toolholders, within cutting width range.
 Seat size 6 inserts can be used in seat size 5 and 6 toolholders, within cutting width range.
 Seat size 8 inserts can be used in seat size 8 and 10 toolholders, within cutting width range.
 Use the larger seat size toolholder for optimal performance.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Grooving and Cut-Off

A

Steel Bar
with Coolant

16

Bar
Diameter

inch bars:
A two-digit number
which indicates the
bar diameter in
1/16" increments.
metric bars:
Bar diameter in millimeters

R

Bar
Length

inch bars:
R = 8"
S = 10"
T = 12"
metric bars:
R = 200mm
S = 250mm
T = 300mm

A3

A3
System

E

Tool
Style

E = End mounted (90°)

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

A16RA3ESR0305N

S

Support Type

S = Standard support for a wide range of groove widths

R

Hand of Tool

03

Seat Size

pocket seat size	cutting width (mm)
03	2,25–3,05
04	3,05–4,05
05	4,05–5,05
06	5,05–6,05
08	6,05–8,05

05

Grooving Depth in mm

conversions:

mm	inch
5mm	= .20"
8mm	= .32"
10mm	= .39"
12mm	= .47"
15mm	= .59"

N

Tool Units

N = Inch
M = Metric

Grooving and Cut-Off

Steel shank with through coolant.

A3™ Deep Grooving

The best choice for high productivity with outstanding application flexibility.

The A3 System is designed specifically for deep grooving operations. The A3 platform enables customers to reach deeper depths while maintaining chip control and tool rigidity.

Performance

- One insert performs:
 - O.D. operations
 - I.D. operations
 - Face grooving operations
- In addition, the A3 system's performance is enhanced by:
 - Beyond™ CVD grades
 - The Beyond Tooling Selection System

Performance

- A3 deep grooving tooling is compatible with square shank, KM™, and Kennametal Capto® platforms.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

By customer demand, Kennametal Inc. and Sandvik Coromant have entered into an agreement that allows both companies to manufacture, market, and sell KM and Coromant Capto products worldwide. Using the trademark Kennametal Capto, we make available a variety of leading and innovative Kennametal tooling designs utilizing the Coromant Capto coupling.

The manufacture and marketing of Kennametal Capto products and the use of the “Capto” trademark are in accordance with a license granted from Sandvik.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

Beyond™ PVD Grades

beyond™

The advanced PVD coating offered by Beyond ISO Carbide Insert Expansion is well suited to resist high-temperatures associated with machining tough alloys. By offering increased tool life (by 30–40%), the general engineering, transportation, aerospace, energy, and earthworks markets can experience benefits in their profitability as well as utilize the strength of the new PVD coating in combination with the broad product offering to perform turning, grooving, and cut-off operations in a wide array of materials and applications while maintaining consistent chip control and minimizing insert edge wear.

KCU10

- PVD-coated grade with excellent wear resistance. Finishing to medium applications.
- Use in all materials, especially stainless steels and high-temp alloys.
- Increase speed by 20–30% and feed by 10–15%.

KCU25

- PVD-coated grade with superior edge toughness and excellent wear resistance. Medium to roughing applications.
- Use in all materials.
- Increase speed, feed, and depth of cut by 10–20%.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

Application Guidelines

Speed and Feed Selection for I.D. and Face Grooving

Speed and Feed Selection for O.D. Grooving

For radial grooving under stable conditions, feed can be increased by up to 50%.

Tool Application Guidelines

- Always use good general machining practices.
- Make the machine and workpiece setup as rigid as possible.
- Integral shank toolholders offer the best rigidity. They should be your first toolholder choice, when possible.
- Use the toolholder with the shortest possible depth of cut for the application ("CD" dimension).
- When changing inserts, make sure the new insert locates securely against the toolholder's positive stop.
- Never tighten the clamping screw without an insert in the pocket.
- Toolholder projection out of the tool block should be as short as possible.
- Inserts should cut as close to center as possible.
- Dwell time in bottom of groove should be less than three revolutions.
- Recommended cutting speeds and feeds are a starting point. Adjust, as necessary, for optimum tool life and chip control.

Deep Grooves

Deep Grooves Slightly Wider than the Tool

1. Plunge the center of the groove.
2. Plunge each side of the groove to get the specified width. Use a slower feed rate when cutting groove sides.

Extra-Wide Deep Grooves

1. Plunge out both sides of the groove width.
2. Plunge center area to remove web of remaining material.
3. Plunge both sides of groove at the required angle, using approximately one-half the width of the grooving tool for maximum width of cut.

Finish Turning of the Groove/Light Profiling

1. Follow recommendations explained above.
2. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path shown here.
3. Use the lightest depth of cut possible while still maintaining good chip breaking, tool life, and surface finish.

■ Grooving Tool Failure and Solution Guide

Face Grooving Application Guidelines

Tool Selection

- When selecting the toolholder, always start at the largest diameter possible and work toward the smaller diameter.

Cutting the First Groove

- The outside diameter of the first groove must be between the diameter minimum and diameter maximum capability of the face grooving tool (see illustration above). This creates clearance for the toolholder.

Chip Control

- Adjust speed and feed for good chip control and evacuation from the groove. Chip compaction can cause poor surface finish, tool breakage, and reduced tool life.

Tool Setting

- The tool should be set as close to the center as possible to avoid extreme formation of burrs.
- Align the cutting edge square to the workpiece.

Widening a Face Groove

- After the first groove has been cut, the groove width can be widened in either direction using the same tool. The best practice is to work from the O.D. to the I.D.

Practical Solutions to Grooving Problems

problem	remedy
burr	<ol style="list-style-type: none"> 1. Verify tool center height. 2. Use sharp tools (index more often). 3. Use positive rake PVD coated insert. 4. Use correct grade for workpiece material. 5. Use correct geometry (e.g., positive rake for workhardening material). 6. Change tool path.
poor surface finish	<ol style="list-style-type: none"> 1. Increase speed. 2. Use sharp tools (index more often). 3. Dwell time in bottom 1-3 revolutions (max). 4. Use proper chip control geometry. 5. Increase coolant flow. 6. Verify proper setup (overhang, shank size). 7. Use correct geometry (e.g., positive rake for workhardening material).
groove bottom not flat	<ol style="list-style-type: none"> 1. Use sharp tools (index more often). 2. Dwell time in bottom 1-3 revolutions (max). 3. Reduce tool overhang (increase rigidity). 4. Reduce feed rate at groove bottom. 5. Use a wider insert. 6. Verify tool center height.
poor chip control	<ol style="list-style-type: none"> 1. Use sharp tools (index more often). 2. Increase coolant concentration. 3. Adjust feed rate (usually increase first).
chatter	<ol style="list-style-type: none"> 1. Reduce tool and workpiece overhang. 2. Adjust speed (usually increase first). 3. Adjust feed (usually increase first). 4. Verify tool center height.
insert chipping	<ol style="list-style-type: none"> 1. Use correct grade for workpiece material. 2. Increase speed. 3. Reduce feed. 4. Use a stronger grade. 5. Increase tool and setup rigidity.
built-up edge	<ol style="list-style-type: none"> 1. Use positive rake PVD coated insert. 2. Increase speed. 3. Reduce feed. 4. Increase coolant flow/concentration. 5. Use cermets.
side walls not straight	<ol style="list-style-type: none"> 1. Check tool alignment for square. 2. Reduce workpiece and tool overhang. 3. Use sharp inserts (index more often).

KM Micro[™] Quick Change Tooling System

A smaller, more compact version of the internationally renowned KM[™] system.

- Quick-change cutter heads reduce indexing and set-up times by 66%.
- Specially designed for use with automatic and smaller universal lathes.
- Unique flange attachment system increases machine tool capacity.
- KM Micro square shank adapters can be installed quickly and easily in existing tool block adapters.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

VG Deep Grooving

Primary Application

The VG Deep-Grooving system is your first choice for productive machining of high-temperature alloys on medium to large lathes.

Features and Benefits

Toolholders

- Rigid bridge clamping system.
- Fast and easy tool change by loosening one screw.
- High-quality standard, close tolerances.

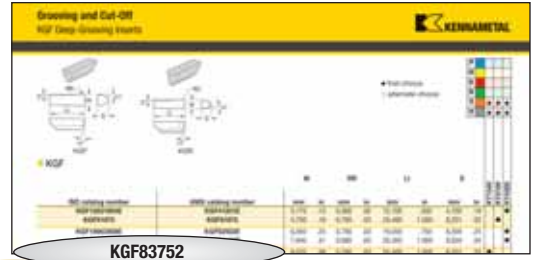

Inserts

- Available in flat top geometries with ground periphery.
- Single-ended styles in industry standard sizes.
- Available in high-performance ceramic grades.

A2™ Cut-Off tool. The image shows a grey metal cutting tool with a yellow handle, resting on a yellow surface. The tool has a cutting edge and a chipbreaker ramp. The background is a black and white checkered pattern.

A2TM Cut-Off

High-performance tools to maximize productivity.

The A2 platform is the ideal system for parting operations on a wide variety of workpiece materials. It works well in smooth and interrupted cuts in both wet and dry operations. Now it is available in KCU25™ for superior edge toughness and excellent wear resistance.

- V-prisms on both top and bottom enable higher clamping force to prevent insert movement, even when cutting at high-feed rates.
- The cutting edge has a molded-in chipbreaker ramp to direct chips away from the blade, extending blade life.
- Positive rake cutting action combined with Kennametal's high-performance PVD coatings result in superior tool life and chip control.
- Fixed insert stop ensures solid seating with every index and delivers up to 30% longer life.
- Cutting height is accurately controlled for maximum reliability and performance on even small-diameter parts.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

A4™ Tooling and Beyond™ Inserts for All Your O.D. and I.D. Applications

Primary Application

Choose A4 tooling for turning, facing, grooving, face grooving, and cut-off applications across a broad range of workpiece materials. The unique clamping system and versatile insert geometry deliver the highest metal removal rates in the industry.

Features and Benefits

A4 Grooving and Turning System

- One tool for turning, facing, grooving, face-grooving, and cut-off in O.D. and I.D. applications means exceptionally fast cycle times, no turret indexes!
- Extra-long clamping area, ground 120° bottom prism seating surface, and an exclusive top guide rail combine to deliver unsurpassed grooving and side-turning stability!
- Precise insert positioning is ensured for accurate cuts!
- Rigid clamping securely locks insert in place through the toughest cuts.

- Versatile design enables one system to handle O.D. and I.D. grooving, face grooving, back turning, undercutting, and even threading operations.
- Chip control inserts provide excellent chip evacuation in grooving, and offer better chip control in multidirectional turning.

GUP Chipbreaker

The A4™ System Increases Productivity

- Covers multiple applications.
- Reduces tool cost.
- Minimizes machining time.

To learn more, scan here.
For instructions on how to scan, please see page xxix.

■ Step 1 • Select A4 size for grooving and turning application

What you need to know:

- Groove depth, width, and profile.
- Material being machined.
- Application to be performed (O.D. and I.D. grooving, turning, face grooving, and cut-off).

General Recommendation to Select the Insert Size

for workpiece diameters	insert seat size
<25mm	3
25–50mm	4
>50mm	5–10

■ Step 2 • Select toolholder based on the application

	conventional toolholders	modular blades
O.D. grooving, cut-off, and turning	page D90	page D106
face grooving	page D94	page D107
I.D. grooving, cut-off, and turning	page D95	—

NOTE: Insert seat size must match the seat size of the toolholder.

■ Step 3 • Select chipbreaker style and feed rate

Choose Chipbreaker Based on Material Type

P	M	N	S	H
GMN	GUP/GMP	GUP/GMP precision ground (-E for KD 1405)	GUP/GMP precision ground	GMN

NOTE: Precision ground A4-P-GMN inserts can be applied on all material groups for inch-width grooving.

Depth of Cut and Feed Guidelines

square inserts (A4G...)			full radius inserts (A4R...)	
GMN chipbreaker	GMP chipbreaker	GUP chipbreaker	GMN chipbreaker	GMP chipbreaker
<ul style="list-style-type: none"> • Groove and turn molded and precision ground inserts. • Stable cutting edge. • Available in metric and inch widths. 	<ul style="list-style-type: none"> • Groove and turn inserts. • Available in molded and precision-ground styles. • Positive rake angle. • Available in metric widths only. 	<ul style="list-style-type: none"> • Groove and turn inserts in new Beyond™ grades. • Available in molded and precision-ground styles. • Positive rake angle with enhanced chip control. • Available in metric widths only. 	<ul style="list-style-type: none"> • Maximum turning and profiling depth of cut equals half the insert width. • The maximum turn and profile feed rate depends on the material to be machined and the depth of cut. For easy-to-machine materials, feed can be increased up to 1.5 times. 	<ul style="list-style-type: none"> • Groove and turn inserts. • Available in molded and precision-ground styles. • Positive rake angle. • Available in metric widths only.

GMN

NOTE: Select feed based on nose radius.
Diagram explanation: R0,2 - R = corner radius; 0,2 = 0,2mm radius

GMP/GUP

■ Step 4 • Select grade and speed

Recommended Beyond™ Grades

cutting condition		P	M	K	N	S	H
heavily interrupted cut		KCU25/KC5025	KCU25/KC5025	KC9125	KCU25/KC5025	KCU25/KC5025	—

smooth cut, pre-turned surface		KT315/KCP10/ KC9110	KT315	KC9110	KCU10/KC5010/ KD1405	K313/KU10/ KCU10/KC5010	KCU10/KC5010

Recommended Beyond Cutting Speeds

Steel starting conditions

material group	grade	speed — m/min (SFM)						m/min	SFM
		60 (200)	120 (400)	185 (600)	245 (800)	300 (1000)	360 (1200)		
P	KCU10							120	400
	KCP10							275	900
	KCP25							220	725
	KC5025							120	400
	KC9110							250	800
	KC9125							200	650
	KT315**							260	850

**KT315 is an alternative choice for steel; primarily available in the GMP chipbreaker.

Stainless Steel starting conditions

material group	grade	speed — m/min (SFM)						m/min	SFM
		45 (150)	90 (300)	140 (450)	185 (600)	230 (750)	275 (900)		
M	KU10							55	185
	KCU10							140	465
	KCU25							110	365
	KC5010							135	450
	KC5025							105	350
	KT315							170	400

Non-Ferrous Metals starting conditions

material group	grade	speed — m/min (SFM)						m/min	SFM
		150 (500)	300 (1000)	460 (1500)	610 (2000)	760 (2500)	900 (3000)		
N	KC5025							365	1200
	KC5010							455	1500
	KD1405***							610	2000

***Recommended for high-silicon aluminum alloys and abrasive nonmetallics.

High-Temperature Alloys starting conditions

material group	grade	speed — m/min (SFM)						m/min	SFM
		15 (60)	35 (120)	55 (180)	75 (240)	90 (300)	140 (450)		
S	KU10							22	75
	KCU10							65	220
	KCU25							50	160
	KC5010							60	200
	KC5025							45	150
	KT315							30	100

Hardened Materials starting conditions

material group	grade	speed — m/min (SFM)						m/min	SFM
		15 (60)	35 (120)	55 (180)	75 (240)	95 (300)	115 (360)		
H	KC5010							30	100

Grooving and Cut-Off

■ **Step 5 • Select insert and holder from catalog page**

NOTE: The insert seat size must match the seat size of your toolholder selection.

Example for A4 — Groove and Turn

Material low-alloyed steel
 Workpiece O.D. 1.5" (38mm)
 Groove depth5" (12mm)
 Groove width850" (22mm)
 Lightly interrupted cut

Recommendation

Insert A4G0405M04U08GMN
 Grade KC9125
 Insert width 4,05mm
 Insert seat size 4

 Toolholder A4SMR160417
 Grooving depth670" (17mm)
 Seat size 4

Speed: 650 SFM (200 m/min)
 Feed: .010 in/rev (0,25 mm/rev)
 Plunge feed: .006 in/rev (0,14 mm/rev)

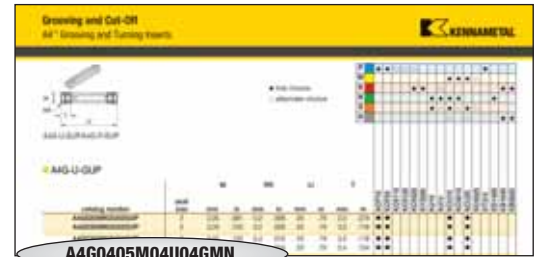

Congratulations!

You have successfully maximized your productivity by selecting the best A4 insert geometry, grade, and cutting specifications for your application!

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Grooving and Cut-Off

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

A4SMR100214

Grooving and Cut-Off

A4

Tooling System

A4 = Grooving and Turning

S

Tool Style

S = Straight

E = End mounted 90°

M

Support Type

M = Maximum support for specific groove widths and straight clearance for unlimited workpiece diameters

E = No steel support for face grooving

R

Hand of Tool

R = Right hand
L = Left hand
N = Neutral

10

Shank Size

inch: For square shanks, the number indicates the height and width in 1/16-inch increments (rectangular: 1st digit = width in 1/8-inch increments, 2nd digit = height in 1/4-inch increments)

metric: Height x width in mm, letter indicates tool length according to ISO

metric tool length (mm)
K = 125
M = 150
P = 170

02

Seat Size

- 02
- 03
- 04
- 05
- 06
- 08
- 10

14

Max Grooving Depth

in millimeters

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

A16RA4EMR0310N

A

Steel Bar with Coolant

16

Bar Diameter

R

Bar Length

A4

A4 Groove & Turn System

E

Tool Style

M

Support Type

R

Hand of Tool

03

Insert Seat Size

10

Grooving Depth in mm

N

Tool Units

N = Inch
M = Metric

E = End mounted (90°)

inch bars:
R = 8"
S = 10"
T = 12"

metric bars:
R = 200mm
S = 250mm
T = 300mm

inch bars:
A two-digit number which indicates the bar diameter in 1/16" increments.

metric bars:
Bar diameter in millimeters

conversions:

mm	inch
7mm	= .28"
10mm	= .39"
12mm	= .47"
16mm	= .63"

pocket seat size	cutting width (mm)
02	2,00–2,62
2B	2,39–2,62
03	3,0–3,05
04	4,0–4,05
05	5,0–5,05
06	6,0–6,05
08	8,0–8,05
10	10,0–10,05

R = Right hand

L = Left hand

M = Maximum support

Grooving and Cut-Off

KM MicroTM Quick Change Tooling System

A smaller, more compact version of the internationally renowned KMTM system.

- Quick-change cutter heads reduce indexing and set-up times by 66%.
- Specially designed for use with automatic and smaller universal lathes.
- Unique flange attachment system increases machine tool capacity.
- KM Micro square shank adapters can be installed quickly and easily in existing tool block adapters.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

NOTE: D min for face grooving applications.
 A4EN-style toolholders are designed without steel support for face grooving capacity.
 Cutting feed recommendations should be reduced by 25–30%.
 Recommended clamp screw torque, 6–8 Nm (50–70 in. lbs.).
 Minimum cutting width supplied for reference only; see insert listing for actual width. Always match seat size of insert to seat size of holder.

A4EN Insert Mounting

A4EN-style holders can be used for either left- or right-hand applications. The seating screw is to be used in position B for a left-hand cut and in position A for a right-hand cut.

Steel shank with through coolant.

5	Capto KGMS Cutting Unit	D117
6	KM™ KGME Cutting Unit	D115–D116
7	KM KGMS Cutting Unit	D115–D116

By customer demand, Kennametal Inc. and Sandvik® Coromant have entered into an agreement that allows both companies to manufacture, market, and sell KM and Coromant Capto products worldwide. Using the trademark Kennametal Capto, we make available a variety of leading and innovative Kennametal tooling designs utilizing the Coromant Capto coupling.

The manufacture and marketing of Kennametal Capto products and the use of the “Capto” trademark are in accordance with a license granted from Sandvik.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

Check the Kennametal website!

Turning

Online product catalog available 24/7

Visit <http://www.kennametal.com/turning/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, holmaking, and tooling systems applications.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

KGMSR1650N
KGMSR2525M50

Grooving and Cut-Off

■ Application Guidelines

Speed and Feed Selection for I.D. and Face Grooving

Speed and Feed Selection for O.D. Grooving

For radial grooving under stable conditions, feed can be increased by up to 50%.

Tool Application Guidelines

- Always use good general machining practices.
- Make the machine and workpiece setup as rigid as possible.
- Integral shank toolholders offer the best rigidity. They should be your first toolholder choice, when possible.
- Use the toolholder with the shortest possible depth of cut for the application ("CD" dimension).
- When changing inserts, make sure the new insert locates securely against the toolholder's positive stop.
- Never tighten the clamping screw without an insert in the pocket.
- Toolholder projection out of the tool block should be as short as possible.
- Inserts should cut as close to center as possible.
- Dwell time in bottom of groove should be less than three revolutions.
- Recommended cutting speeds and feeds are a starting point. Adjust, as necessary, for optimum tool life and chip control.

Deep Grooves

Deep Grooves Slightly Wider than the Tool

1. Plunge the center of the groove.
2. Plunge each side of the groove to get the specified width. Use a slower feed rate when cutting groove sides.

Extra-Wide Deep Grooves

1. Plunge out both sides of the groove width.
2. Plunge center area to remove web of remaining material.
3. Plunge both sides of groove at the required angle, using approximately one-half the width of the grooving tool for maximum width of cut.

Finish Turning of the Groove/Light Profiling

1. Follow recommendations explained above.
2. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path shown here.
3. Use the lightest depth of cut possible while still maintaining good chip breaking, tool life, and surface finish.

Grooving Tool Failure and Solution Guide

Face Grooving Application Guidelines

Tool Selection

- When selecting the toolholder, always start at the largest diameter possible and work toward the smaller diameter. This will allow the strongest tool to be used.

Cutting the First Groove

- The outside diameter of the first groove must be between the diameter minimum and diameter maximum capability of the face grooving tool (see illustration above). This creates clearance for the toolholder.

Chip Control

- Adjust speed and feed for good chip control and evacuation from the groove. Chip compaction can cause poor surface finish, tool breakage, and reduced tool life.

Tool Setting

- The tool should be set as close to the center as possible to avoid extreme formation of burrs.
- Align the cutting edge square to the workpiece.

Widening a Face Groove

- After the first groove has been cut, the groove width can be widened in either direction using the same tool. The best practice is to work from the O.D. to the I.D.

Practical Solutions to Grooving Problems

problem	remedy
burr	<ol style="list-style-type: none"> 1. Verify tool center height. 2. Use sharp tools (index more often). 3. Use positive rake PVD coated insert. 4. Use correct grade for workpiece material. 5. Use correct geometry (e.g., positive rake for workhardening material). 6. Change tool path.
poor surface finish	<ol style="list-style-type: none"> 1. Increase speed. 2. Use sharp tools (index more often). 3. Dwell time in bottom 1-3 revolutions (max). 4. Use proper chip control geometry. 5. Increase coolant flow. 6. Verify proper setup (overhang, shank size). 7. Use correct geometry (e.g., positive rake for workhardening material).
groove bottom not flat	<ol style="list-style-type: none"> 1. Use sharp tools (index more often). 2. Dwell time in bottom 1-3 revolutions (max). 3. Reduce tool overhang (increase rigidity). 4. Reduce feed rate at groove bottom. 5. Use a wider insert. 6. Verify tool center height.
poor chip control	<ol style="list-style-type: none"> 1. Use sharp tools (index more often). 2. Increase coolant concentration. 3. Adjust feed rate (usually increase first).
chatter	<ol style="list-style-type: none"> 1. Reduce tool and workpiece overhang. 2. Adjust speed (usually increase first). 3. Adjust feed (usually increase first). 4. Verify tool center height.
insert chipping	<ol style="list-style-type: none"> 1. Use correct grade for workpiece material. 2. Increase speed. 3. Reduce feed. 4. Use a stronger grade. 5. Increase tool and setup rigidity.
built-up edge	<ol style="list-style-type: none"> 1. Use positive rake PVD coated insert. 2. Increase speed. 3. Reduce feed. 4. Increase coolant flow/concentration. 5. Use cermets.
side walls not straight	<ol style="list-style-type: none"> 1. Check tool alignment for square. 2. Reduce workpiece and tool overhang. 3. Use sharp inserts (index more often).

Top Notch™ Grooving Tools and Beyond™ Inserts for Your Shallow Groove and Turn Operations

Primary Application

Top Notch Grooving is the proven solution for high productivity. The Top Notch system provides consistent tool performance, accurate indexing, and superior clamping to provide excellent surface finishing and superior tool life.

Features and Benefits

- The Beyond PVD coated grades are designed to cut a variety of workpiece materials.
- Rigid clamping securely locks insert in place through the toughest cuts.
- Versatile design enables one system to handle O.D. and I.D. grooving, face grooving, back turning, undercutting, and even threading operations.
- Chip control inserts provide excellent chip evacuation in grooving, and offer better chip control in multidirectional turning.

Our rigid clamping design prevents insert movement during high-feed rate applications. This benefit ensures excellent surface finish, improved productivity, and superior tool life and promotes perfect concentricity. The rugged bridge clamp generates locking forces in three directions to provide superior resistance to side thrust and tangential forces.

■ Step 1 • Select system based on the required groove depth

What you need to know:

- Groove depth, width, and profile.
- Material to be machined.
- Application to be performed (face, O.D., or I.D. grooving).
- Toolholder requirements (e.g., KM™, square shank, right/left).

Top Notch™

Grooving

For grooving depth $\leq 1.5x$ grooving width, review system capability chart and proceed to Step 2.

A3™ or A4™

Deep Grooving

For grooving depth $\geq 1.5x$ grooving width, see A3 Deep Grooving page D26 or A4 Grooving and Turning page D70.

Grooving and Cut-Off

Top Notch Grooving for Internal, External, and Face Grooving Applications

system capabilities		minimum in (mm)	maximum in (mm)
O.D./I.D. grooving	width	.031 (0,79)	.375 (9,53)
	depth	.050 (1,27)	.375 (9,53)
face grooving	width	.125 (3,18)	.375 (9,53)
	depth	.150 (3,81)	.250 (6,35)
internal grooving	diameter	.440 (11,2)	—
face grooving diameter	standard	.940 (23,9)	—
	deep	1.875 (47,6)	—
deep O.D./I.D. grooving	width	.062 (1,57)	.250 (6,35)
	depth	.125 (3,18)	.500 (12,70)
deep face grooving	width	.125 (3,18)	.250 (6,35)
	depth	.250 (6,35)	.500 (12,70)

■ Step 2 • Select toolholder based on the application

NOTE: Toolholders are available as conventional square shank versions as well as quick-change versions. The insert size must match the gage insert of your toolholder selection.

O.D. and face grooving applicationssee pages D146–D149
 I.D. grooving applicationssee pages D150–D154

Step 3 • Select chipbreaker style and feed rate
Chipbreaker and Feed Rates • in/rev (mm/rev)

workpiece material and application	P	M	K	N	S	H
first choice	NG-K .003-.011 (0,08-0,28)	NG-K .0025-.008 (0,07-0,20)	NG .004-.012 (0,01-0,30)	NGP .004-.012 (0,01-0,30)	NG-K .0025-.008 (0,07-0,20)	NG-ST CBN tipped .002-.004 (0,05-0,10)
alternate choice	NG .004-.012 (0,10-0,30)	NGP .004-.009 (0,10-0,23)	NG-K .003-.011 (0,08-0,28)	NG-K .003-.012 (0,08-0,30)	NGP .004-.008 (0,10-0,20)	—

Step 4 • Select grade and speed
Recommendations for Grade and Speed Selection • SFM (m/min)

machining condition	workpiece material					
	P	M	K	N	S	H
high-performance for optimal conditions (clean cuts, good machine condition, higher speed capability)	KC9110 400-1200 (120-370)	KCU10/KC5010 250-750 (80-230)	KC9320 400-1200 (120-370)	KD1425 800-10000 (240-3050)	KCU10/KC5010 50-400 (20-120)	KB5625 250-500 (80-150)
	KT315 330-750 (100-230)	KT315 230-650 (70-200)	KC5010 250-750 (80-230)	—	—	—
general purpose (first choice for general machining)	KC9110 400-1000 (120-300)	KCU25/KC5025 160-400 (50-120)	KC9110 400-1000 (120-300)	KC5410 500-3000 (150-910)	KCU25/KC5025 35-200 (10-60)	KB5625 250-500 (80-150)
unfavorable conditions (roughing, poor machine condition, interrupted cuts, low speed, I.D. grooving)	KCU25/KC5025 180-450 (50-140)	KCU25/KC5025 130-300 (40-90)	KC5025 200-500 (60-300)	KCU25/KC5025 200-1000 (60-300)	KCU25/KC5025 35-150 (10-50)	KB1630 200-350 (60-110)

Step 5 • Select insert and holder from catalog page

NOTE: The insert size must match the gage insert size of your toolholder selection.

Example for Top Notch • Grooving

 Material.....low-alloyed steel
 Groove depth079" (2mm)
 Groove width118" (3mm)
 OperationI.D. cut, limited speed capability,
 plunge groove and chamfer

Recommendation

 Insert.....NG2M300RK
 GradeKC5025
 Insert width118" (3mm)
 Insert size2

 Toolholder.....A20QNN2L2 (metric)
 A12NEL2 (inch)
 Gage insertN.2R

 Speed: 400 SFM (120 m/min)
 Feed: .006 in/rev (0,15 mm/rev)

Congratulations!

You have successfully maximized your productivity by selecting the best Top Notch insert geometry, grade, and cutting specifications for your application!

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

D

Qualified Surface and Length

- A** = Qualified back and end, 4" long
- B** = Qualified back and end, 4.5" long
- C** = Qualified back and end, 5" long
- D** = Qualified back and end, 6" long
- E** = Qualified back and end, 7" long
- V** = Qualified back and end, 3.5" long*
- Q** = Qualified metric holder

inch:

This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and larger, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width and the second digit the number of quarters of height, except for a toolholder 1-1/4" x 1-1/2", which is given the number 91.

metric:

Shank height and width in mm and holder length according to ISO standard.

* Kennametal proprietary standard only.

**Side mount utility holder can only use NTU inserts.

Top NotchTM Thread Tooling

The proven high-productivity threading solution.

Top Notch Threading with Beyond™ Insert technology provides consistent tool performance and superior clamping thread to almost any operation. With the largest selection of grades and geometries in the industry, the Top Notch Threading system is a proven solution.

- Largest selection of insert geometries and grades in the industry.
- A very rigid insert clamping design ensures best tool life, surface finish, and workpiece quality.
- Eliminates long troublesome coils.
- Minimizes built-up edge.
- Precisely cuts most common materials.
- Reduces cutting forces.
- Ensures accurate high-quality threads.
- Excellent for internal threading operations.
- Available in partial profile inserts for 60° thread forms.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

■ **Machining Guidelines for Chip Control • Grooving**

- Center height of insert should be positioned at the center of the workpiece, or up to .005" (0,13mm) above.
- Dwell time in the bottom of the groove, more than three revolutions, is not recommended.
- Chip control is feed rate related and should be adjusted to fit the particular situation. Recommended feed range is .003–0.012 IPR (0,08–0,3 mm/rev).

■ **Groove Limits (Maximum Internal Groove Depth vs. Minimum Bore Diameter)**

insert	maximum groove depth		minimum bore diameter	
	inch	mm	inch	mm

NG-3122R/L				
NG-3125R/L	.138	3,51	1.875	47,63
NG-3142R/L				
NG-3156R/L	.125	3,18	1.625	41,28
NG-3178R/L				
NG-3185R/L	.110	2,79	1.375	34,93
NG-3189R/L				
NG-4125R/L	.150	3,81	2.750	69,85
	.250	6,35	5.750	146,05
NG-4189R/L	.245	6,22	5.000	127,00
NG-4213R/L	.240	6,10	4.500	114,30
NG-4219R/L	.218	5,54	3.250	82,55
NG-4250R/L	.200	5,08	2.500	63,50

NOTE: The same maximum groove depth and minimum bore diameter values also apply to metric, NG-K (chip control), and NR (full radius) inserts of similar size.

■ **Machining Guidelines for Chip Control • Turning/Profiling**

- Maximum depth of cut for side cutting (turning/profiling) depends upon material being cut and width of the tool. However, some general guidelines are:
 - 1) .031–.062" (0,79–1,6mm) wide insert can cut up to .025" (0,6mm) deep.
 - 2) .067–.128" (1,7–3,3mm) wide insert can cut up to .040" (1mm) deep.
 - 3) .138–.189" (3,5–4,8mm) wide insert can cut up to .080" (2mm) deep.
 - 4) .197–.375" (5–9,5mm) wide insert can cut up to .120" (3mm) deep.

■ **Finish Turning the Groove**

1. Plunge both sides of groove width.
2. Plunge center area to remove web of material remaining.
3. To avoid insert chipping and to achieve groove wall perpendicularity, follow the tool path outlined here.
4. Use the lightest depth of cut that still allows good chip breaking, tool life, and surface finish.

insert	maximum groove depth		minimum bore diameter	
	inch	mm	inch	mm
	.375	9,53	28.812	731,82
NG-5250R/L	.361	9,17	15.812	401,62

NOTE: For internal applications, use only NFD-KI inserts.

KGF and KGT Cut-Off Inserts

Primary Application

KGT and KGF inserts specifically designed to fit SELF-GRIP® toolholders available from Iscar®. For traditional cut-off applications, the original KGT-style inserts are available in widths ranging from 2,25–4,80mm. For increased stability in large diameter cut-off applications, the KGF geometry is available in widths ranging from 1,60–9,50mm.

Features and Benefits

KGT Inserts

- KGT inserts are T-Type with no stopper. The KGT inserts replace single-end cutting inserts.

KGF Inserts

- Single-side insert for cut-off applications. This insert has a hard stop that seats insert securely into the pocket.

UN maximum TPI of 44
ISO minimum pitch of 0,6mm

**Partial Profile —
Chip Control (NT-K):**
UN maximum TPI of 36
ISO minimum pitch of 0,7mm

Coarse Pitch/Heavy Duty

Cresting (Full Profile):
UN minimum TPI of 7
ISO maximum pitch of 3mm

**Partial Profile —
Flat Top and Chip Control
(NT-C and NT-CK):**
UN minimum TPI of 4.5
ISO maximum pitch of 5,5mm

Top Notch Internal Threading

Boring Bar Diameters:

- Inch — .312–2.5"
- Metric — 10–50mm
- Minimum bore — .440" (11,5mm)
- Steel

Fine Pitch

Cresting (Full Profile):
UN maximum TPI of 16
ISO minimum pitch of 1,5mm

**Partial Profile —
Flat Top (NT-1L, NTF and NTK):**
UN maximum TPI of 24
ISO minimum pitch of 1mm

**Partial Profile —
Chip Control (NT-K):**
UN maximum TPI of 20
ISO minimum pitch of 1,25mm

Coarse Pitch/Heavy Duty

Cresting (Full Profile):
UN minimum TPI of 8
ISO maximum pitch of 3mm

**Partial Profile —
Flat Top and Chip Control
(NT-C and NT-CK):**
UN minimum TPI of 4,5
ISO maximum pitch of 5,5mm

LT Laydown External Threading

Square Shank Toolholder Sizes:

- Inch — .500–1.25" available
- Metric — 8–40mm available

Fine Pitch

Cresting (Full Profile) and Partial Profile:

- UN maximum TPI of 48
- ISO minimum pitch of 0,5mm

Coarse Pitch/Heavy Duty

Cresting (Full Profile):

- UN minimum TPI of 8
- ISO maximum pitch of 5mm

Partial Profile:

- UN minimum TPI of 5
- ISO maximum pitch of 5mm

LT Laydown Internal Threading

Boring Bar Diameters:

- Inch — .375–1.25"
- Metric — 12–50mm
- Minimum bore — .500" (13mm)
- Steel and carbide

Fine Pitch

Cresting (Full Profile) and Partial Profile:

- UN maximum TPI of 48
- ISO minimum pitch of 0,5mm

Coarse Pitch/Heavy Duty

Cresting (Full Profile):

- UN minimum TPI of 8
- ISO maximum pitch of 5mm

Partial Profile:

- UN minimum TPI of 5
- ISO maximum pitch of 5mm

Top Notch™ Thread Tooling Is the Proven High-Productivity Threading Solution!

Primary Application

Top Notch Threading with Beyond™ Insert technology provides consistent tool performance and superior clamping thread to almost any operation. With the largest selection of grades and geometries in the industry, the Top Notch Threading system is a proven solution.

Features and Benefits

Choosing the Top Notch Threading System

- A superior choice for heavy-duty applications like machining of Acme, Buttress, and API threads. Top Notch is also the best system for coarse pitch and multitooth threading applications.
- Largest selection of insert geometries and grades in the industry.
- A very rigid insert clamping design ensures best tool life, surface finish, and workpiece quality.
- Simplicity of the Top Notch design does not require shim selection for thread helix angles. This helps to avoid mistakes on the shop floor.
- Reduces inventory by using the same Top Notch toolholders and boring bars with either threading or grooving inserts.
- Top Notch chipbreaker inserts eliminate long troublesome coils.
- An excellent choice for special thread forms and toolholder designs.

Precision-Ground Thread Form

- Minimizes built-up edge.
- Precisely cuts most common materials.
- Reduces cutting forces.
- Ensures accurate high-quality threads.

Superior Chip Control

- Eliminates long, troublesome coils.
- Excellent for internal threading operations.
- Available in partial profile inserts for 60° thread forms.

■ Step 1 • Select threading method and hand of tooling

What you need to know:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix

external left-hand thread

external right-hand thread

internal left-hand thread

internal right-hand thread

Feed Direction Away from the Chuck • Reverse Helix

external right-hand thread

external left-hand thread

internal right-hand thread

internal left-hand thread

NOTE: Top Notch threading bars require opposite hand insert and clamp.
 Right-hand bar requires left-hand insert and clamp.
 Left-hand bar requires right-hand insert and clamp.

■ Step 2 • Select insert for application

- See threading insert overview on page E9.
- Select cresting inserts for fully controlled thread form including diameter control. Cresting inserts eliminate the need for deburring.
- Non-cresting partial profile inserts can cut a variety of thread pitches. Chip control is only available with partial profile inserts.
- Note insert size for toolholder selection.

	insert size	catalog number	KCU25/KC5025	KCU10/KC5010
	2	NT-2RK	•	•
	3	NT-3RK	•	•
	4	NT-4RK	•	•

■ **Step 3 • Select grade and speed**

Recommendations for Grade and Speed Selection • SFM (m/min)

workpiece material	P	M	K	N	S
insert style	chip control or neutral	chip control or positive	neutral	positive	positive
optimum cutting conditions	KCU10/KC5010 160-750 (50-230)	KCU10/KC5010 160-600 (50-185)	KCU10/KC5010 230-700 (70-210)	KC5410 230-1300 (70-390)	KCU10/KC5010 65-400 (20-120)
first choice	KCU25/KC5025 130-650 (40-200)	KCU25/KC5025 130-450 (40-135)	KCU25/KC5025 200-475 (60-145)	KCU25/KC5025 160-1150 (50-360)	KCU25/KC5025 35-330 (10-100)

Example

Chip controlNT-K or NT-CK (partial profile only)
 NeutralNT, NT-C, NTF, NTC, NJ, NJF, NDC-V, NA, NDC, NTB-A/B
 PositiveNTP, NTK, NJP, NJK

■ **Step 4 • Select holder from catalog page**

What you need to know:

- External/internal operation.
- Minimum bore diameter (for internal operations).
- Hand of tool.
- Insert size (gage insert).

NOTE: The insert size must match the gage insert size of your toolholder selection.

catalog number	gage insert
NSR-163D	N.3R
NSR-164D	N.4R

NOTE: Top Notch toolholders and boring bars are listed with a gage insert to indicate the size and hand required. They are compatible with both grooving and threading inserts of the same size.

Select the Appropriate Holder for the Insert Size and Hand:

NOTE: Optimize your threading operation by using the proper infeed angle and the recommended infeed values.

■ **Step 5 • Select insert and holder from catalog page**

Top Notch Threading Example

Application8 TPI Acme internal
 right-hand thread

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

NTC3R10E

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

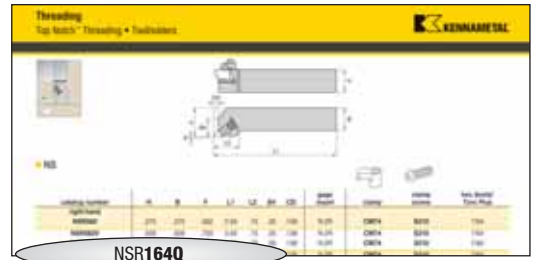

Threading

Inch	S	R	
N	S	R	
Metric			
N	S	R	
Insert Holding Location	Insert Mounting Location	Hand of Tool	Drop Head
<p>N = Top Notch*</p>	<p>SU** = Side mount utility</p> <p>E = End</p> <p>S = Side mount, offset</p> <p>R = Undercut</p> <p>AS = Side mount, no offset</p>	<p>R L end mount</p> <p>R L side mount</p>	<p>DH</p>

*Kennametal proprietary standard only.
 **Side mount utility holder can only use NTU inserts.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

Q

Shank
Size

Insert
Size

Qualified Surface
and Length

inch:

This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and larger, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width and the second digit the number of quarters of height, except for a toolholder 1-1/4" x 1-1/2", which is given the number 91.

metric:

Shank height and width in mm and holder length according to ISO standard.

insert size	W1
2	.150"
3	.195"
4	.255"
5	.380"
6	.383"
8	.438"

- A** = Qualified back and end, 4" long
- B** = Qualified back and end, 4.5" long
- C** = Qualified back and end, 5" long
- D** = Qualified back and end, 6" long
- E** = Qualified back and end, 7" long
- V** = Qualified back and end, 3.5" long
- Q** = Qualified metric holder

The LT — Laydown Threading System

Triangle threading inserts and tools that provide the highest accuracy and quality level for daily production needs.

- LT is the system of choice for fine-pitch threads, high-helix/multistart threads, and single-point threading in small-diameter bores.
- Variable shim angles enable proper cutting geometry for high-helix angle and reverse helix angle threading. This maximizes tool life and improves thread quality.
- Increase productivity by outperforming conventional PVD grades with up to a 30% advantage in cutting speeds.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

 **KENNAMETAL®**

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Threading

Inch

A

Bar Type

A = Steel with coolant

S = Steel without coolant

E = Carbide with coolant

C = Carbide without coolant

J = Heavy metal with coolant

H = Interchangeable head

32

Bar Diameter

A two-digit number that increases the bar diameter in 1/16" increments

N

Insert Holding Method

N* = Top Notch

E

Insert Location

E = End mount

*Kennametal standard only.

NOTE: Right-hand bars use left-hand inserts and clamps.

Left-hand bars use right-hand inserts and clamps.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

Inch

R

Hand of Bar

R = Right hand

L = Left hand

3

Insert Size

insert size	W1
1	.100"
2	.150"
3	.195"
4	.255"
5	.380"
6	.383"
8	.438"

W

Additional Information

W = through-coolant interchangeable head

Steel shank with through coolant.

Threading

LT • Laydown Triangle Threading

Primary Application

LT Laydown triangle threading is the system of choice for fine-pitch threads, high-helix/multistart threads, and single-point threading in small-diameter bores. With a wide selection of CB-style chip control inserts, you will receive superior chip management for excellent surface finishes and minimal operator intervention. The low-profile design enables unrestricted chip flow — ideal for I.D. threads, and variable shim angles enable proper cutting geometry for high-helix angle and reverse helix angle threading, maximizing tool life and improving thread quality.

Features and Benefits

Precision-Ground Thread Form on LT and LT-CB

- Minimizes built-up edge.
- Precisely cuts most common materials.
- Reduces cutting forces.
- Ensures accurate, high-quality threads.

Superior Chip Control

- Eliminates long, troublesome coils.
- Excellent for internal threading operations.
- Available in both partial and full profile inserts for all common thread forms.

KC5010™ and KC5025™ Premium PVD TiAlN-Coated Grades

- Increase tool life at existing machining conditions.
- Increase productivity by outperforming conventional PVD grades with up to a 30% advantage in cutting speeds.

Kenna Universal™ Inserts

- Precision molded LT-K thread form provides outstanding utility and value.
- Excellent chip control combined with the new KU25T™ grade enables trouble-free threading on a variety of workpiece materials.

Step 1 • Select threading method and hand of tooling

Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix

Feed Direction Away from the Chuck • Reverse Helix

Threading

Step 2 • Select threading method and hand of tooling

Required Information:

- External/internal operation.
- Minimum bore diameter (for internal operations).
- Hand of tool.
- Insert size (gage insert).

Select the Appropriate Holder for the Insert Size and Hand:

The insert size must match the gage insert size of your toolholder selection:

catalog number	gage insert	minimum bore diameter	shim
S1212LSER3	LT16NR	.90"	SM-Y13
A2020LSER16	LT16NR	16mm	SM-Y13

Step 3 • Choose insert for application

- Select cresting inserts for fully controlled thread form including diameter.
- Cresting inserts eliminate the need for deburring and are optimized for the best tool life at that pitch.
- Non-cresting partial profile inserts offer the flexibility to cut a variety of thread pitches with one insert.
- Note insert size for toolholder selection.

NOTE: See Threading Insert Overview on page E45.

insert size	catalog number	TN6025
11	LT11NRA60	•
16	LT6NRAG60	•

Step 4 • Select grade and speed

Recommendations for Grade and Speed Selection • SFM (m/min)

workpiece material	P	M	K	N	S	
Kenna Perfect™	insert style	CB chipbreaker		Flat Top	CB Chipbreaker	
	optimum cutting conditions	KC5010 160–750 (50–230)	KC5010 160–600 (50–185)	KC5010 230–700 (70–210)	KC5010 230–1300 (70–390)	KC5010 65–400 (20–120)
	first choice	KC5025 130–650 (40–200)	KC5025 130–450 (40–135)	KC5025 200–475 (60–145)	KC5025 160–1150 (50–360)	KC5025 35–330 (10–100)
Kenna Universal™	insert style	-K chipbreaker				
	selection	KU25T 80–450 (25–140)	KU25T 80–350 (25–100)	KU25T 100–360 (30–110)	KU25T 100–1000 (30–300)	KU25T 35–280 (10–85)

NOTE: CB-style chip control inserts are not available with some thread forms. In those cases, flat top inserts can be substituted.

Step 5 • Select appropriate shim

Required Information:

- Thread form (TPI or pitch).
- Pitch diameter.
- Helix method (hand of tool, feed direction, hand of thread).

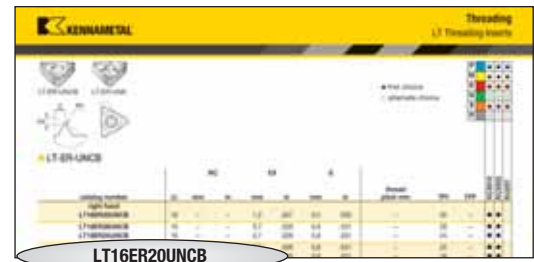

Select the proper shim: SMYE... for external RH or internal LH
SMYL... for internal RH or external LH

NOTE: If recommended shim is different from shim supplied with toolholder, order shim separately. Optimize your threading operation by using the proper infeed angle and the recommended infeed values. See the Technical Section on pages E85–E87. Also see detailed shim selection information on pages E105–E107.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Inch

LT Type of Insert LT = Laydown triangle threading	16 Cutting Edge Length (Size)	ER Hand of Insert ER = External right hand EL = External left hand NR = Internal right hand NL = Internal left hand	20 Thread Pitch	UN Thread Profile	CB Chip Control □ = Flat top CB = Chipbreaker K = Kenna Universal™ chipbreaker

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Threading

Inch	L	S	AS	R
Metric	L Insert Style	S Insert Holding Method	AS Tool Style	R Hand of Tool
	<p>L = Laydown triangle</p>	<p>S = Insert screw or clamp only</p>	<p>AS = Straight shank</p> <p>S = Offset shank</p>	<p>L = Left hand</p> <p>R = Right hand</p>

NOTE: Toolholders with primary shank sizes larger than 1/2" or 12mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

LT Threading Shim Catalog Numbering System

SM Shim	Y Shim for LT Standard Inserts	E Insert Threading E = External I = Internal	3 Insert Size D value in 1/8"	2P Shim Angle 2P = 2° positive 1P = 1° positive — = 0° neutral 1N = 1° negative 2N = 2° negative 3N = 3° negative
-------------------	--	--	--	---

NOTE: For shims and shim kits, see pages E105–E107.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

<p>Inch</p>	<p>16</p>	<p>3</p>	<p>D</p>																
<p>Metric</p>	<p>2525K</p>	<p>16</p>	<p>D</p>																
<p>Drop Head</p>	<p>Shank Size</p>	<p>Insert Size</p>	<p>Qualified Surface and Length</p>																
	<p>inch: This position will show a significant two-digit number that indicates the holder cross section. For shanks 5/8" square and over, the number will represent the number of sixteenths of width and height. For shanks under 5/8" square, the number of sixteenths of cross section will be preceded by a zero. For rectangular holders, the first digit represents the number of eighths of width, and the second digit the number of quarters of height, except for a toolholder 1-1/4" x 1-1/2", which is given the number 91.</p> <p>metric: Shank height and width in mm and holder length according to ISO standard.</p>	<p>Size equals number of 1/8" increments of IC.</p> <table border="1"> <thead> <tr> <th>insert size (inch)</th> <th>insert size (mm)</th> <th>D (inch)</th> <th>L1 (mm)</th> </tr> </thead> <tbody> <tr> <td>2</td> <td>11</td> <td>1/4</td> <td>11,0</td> </tr> <tr> <td>3</td> <td>16</td> <td>3/8</td> <td>16,5</td> </tr> <tr> <td>4</td> <td>22</td> <td>1/2</td> <td>22,0</td> </tr> </tbody> </table>	insert size (inch)	insert size (mm)	D (inch)	L1 (mm)	2	11	1/4	11,0	3	16	3/8	16,5	4	22	1/2	22,0	<p>C = Qualified back and end, 5" long D = Qualified back and end, 6" long E = Qualified back and end, 7" long T = Qualified back and end, 3.250" long Q = Qualified metric holder</p>
insert size (inch)	insert size (mm)	D (inch)	L1 (mm)																
2	11	1/4	11,0

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

S	08	12	L
Bar Type	Primary Necked Shank Bar Diameter	Secondary (Mounting) Bar Diameter	Insert Style
	<p>A two-digit number that indicates the primary bar diameter in 1/16" increments. Metric diameter in mm.</p>	<p>A two-digit number that indicates the secondary bar diameter in 1/16" increments. Metric diameter in mm.</p>	<p>L = Laydown triangle</p>
<p>A = Steel with coolant S = Steel without coolant E = Carbide with coolant H = Interchangeable head with coolant</p>			

NOTE: Boring bars with primary bar diameters larger than 5/8" or 16mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

■ LT Threading Shim Catalog Numbering System

SM	Y	E	3	2P
Shim	Shim for LT Standard Inserts	Insert Threading	Insert Size	Shim Angle
		E = External I = Internal	D value in 1/8"	2P = 2° positive 1P = 1° positive — = 0° neutral 1N = 1° negative 2N = 2° negative 3N = 3° negative

NOTE: For shims and shim kits, see pages E105–E107.

By referencing this easy-to-use guide, you can identify the correct product to meet your needs.

S0812LSER2

S

Insert Holding Method

S = Insert screw or clamp

E

Bar Style

E = End cutting edge mount

R

Hand of Bar

L = Left hand

R = Right hand

2

Insert Size

Size equals number of 1/8" increments of IC.

insert size (inch)	insert size (mm)	D (inch)	L1 (mm)
2	11	1/4	11,0
3	16	3/8	16,5
4	22	1/2	22,0

Threading

NOTE: Boring bars with primary bar diameters larger than 5/8" or 16mm are supplied with clamp and insert screw. Secure the insert with either the clamp or insert screw. **Do not use both.**

Steel shank without through coolant.

NOTE: Cutting units are supplied with insert screw and clamp assembly. However, tools are designed to use either the insert screw or the clamp assembly, not both.

Top Notch™ Thread Tooling

Is the proven high productivity threading solution.

Top Notch Threading with Beyond™ Insert technology provides consistent tool performance and superior clamping thread to almost any operation. With the largest selection of grades and geometries in the industry, the Top Notch Threading system is a proven solution.

- Superior choice for heavy-duty applications.
- Rigid insert clamping design ensures best tool life, surface finish, and workpiece quality.
- Excellent choice for special thread forms and toolholder designs.
- Minimizes built-up edge.
- Precisely cuts most common materials.
- Ensures accurate high-quality threads.
- Eliminates long, troublesome coils.
- Excellent for internal threading operations.
- Available in partial profile inserts for 60° thread forms.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

Radial

Advantage —

- Cutting on both sides of the thread form places all of the cutting edge in the cut and protects edge from chipping.
- Even wear on the insert.

Disadvantage —

- Tool develops a channel chip that may be difficult to handle.
- Tip chipping occurs when cutting high-tensile materials.
- Burr condition is increased.
- Entire cutting edge is engaged at finish of thread, causing increased tendency to chatter.

Flank

Advantage —

- Cutting with the leading edge of the threading tool gives the chip a definite flow out of the thread form area. This reduces the burr problem on the trailing edge of the tool. To avoid bad surface finish, chipping, or excessive flank wear due to rubbing of the trailing edge, the infeed angle should be 3° to 5° smaller than the angle of the thread. This is a type of modified flank.

Disadvantage —

- Trailing edge of threading insert may drag or rub and tends to chip.
- Torn or poor surface finish threads result when cutting soft, gummy materials like low-carbon steels, aluminum, and stainless steels.

Modified flank

Advantage —

- Tool cuts both sides of thread form, so it is protected from chipping similar to 0° infeed. Channel-type chip develops, but uneven chip thickness helps remove the chip similar to flank infeed.
- This is the preferred method, especially when used with a chip control insert.
- Combined radial and/or alternating flank infeed.
- Results in good tool life, with wear evenly distributed over both flanks.

Disadvantage —

- Similar disadvantages as with 0° infeed, although reduced somewhat in magnitude as cutting forces are better equalized and chip flow is much less of a problem.

Alternating flank

Advantage —

- Increased tool life because both edges are used equally.
- NOTE: Some machine tools may require special programming techniques to achieve this method of infeed.

Disadvantage —

- Difficult to cut on conventional machinery.

Machining Guidelines When Using Chop Control Inserts

Kennametal insert technology brings chip control to your threading operations with the Top Notch™ platform. The proprietary Kennametal recessed chip groove, when used according to our recommendations, breaks the chip in most applications. Our positive rake design lowers cutting pressures, which in turn lowers damaging heat generation thus providing better tool life. Long, stringy chips no longer mar the workpiece surface finish. The danger to operators when removing long chips from the workpiece and chuck is eliminated. All of these benefits combine to improve the productivity of your threading operations.

Machine Programming

Modern CNC controls allow the programmer to easily adjust infeed angle, the number of passes, and depth of cut for each pass. The chip control threading insert performs best at an infeed angle of 29° 30', although 15° to 30° is acceptable. Also, it is important to maintain a minimum of .005" (0,127mm) depth of cut on every pass. In most applications, use of CNC canned cycles produce only marginally successful results. Custom written programs are better and are recommended.

The Last Pass

Some CNC controls require the last pass to be at a 0° infeed angle because the chip will not break on the last pass. On most carbon and alloy steels, the last pass can remain at .005" (0,127mm) depth of cut and produce an acceptable finish. For some materials, a .001" (0,025mm) to .003" (0,076mm) (spring) pass may be used to improve surface finish, however, chip breaking action may be compromised.

Infeed Angle

In order to effectively and consistently break the chip, it is important to use an infeed angle between 28° and 29° 30'. Do not apply chip control inserts at infeed angles less than 15°.

Threading

Partial Profile

Tooth profile with universal profile shape:

- 55° or 60° without cutting edges for the tooth tapers.
- Reduced inventory.
- For various pitches in a limited range.
- Preferably one time production.
- Outside/core diameters must be accurately pre-turned.

Full Profile

Tooth profile with full profile shape including tooth height:

- For burr-free, precise threads in the specified pitch.
- General application.
- Machining allowance for outside/core diameter around 0.004–0.006".

Multitooth Profile

Multitooth full profile generally with 2–3 teeth:

- Highly productive threading with fewer passes and longer tool life.
- Requires a rigid setup and long thread runoff.
- Minimum clearance width approximately 1.25 x E as per indexable insert dimensions table.

Formulas

inch formula		
to find	given	formula
SFM	D (inch) RPM	$SFM = \frac{\pi \times D}{12"} \times RPM$
RPM	D (inch) SFM	$RPM = \frac{SFM \times 12"}{D \times \pi}$
metric formula		
to find	given	formula
m/min	D (mm) RPM	$m/min = \frac{\pi \times D}{1000} \times RPM$
RPM	D (mm) m/min	$RPM = \frac{m/min \times 1000}{D \times \pi}$

Legend

IPM = inch per minute RPM = revolutions per minute
SFM = surface feet per minute D = part diameter
m/min = meters per minute π = 3.1416

Maximum Cutting Speeds

Maximum cutting speed is often limited by the maximum travel speed (IPM or mm/min) of the tool allowed by the machine. Check your maximum speed with the following formulas:

inch formula: maximum cutting speed (SFM) =

$$\text{part diameter (inch)} \times 3.14 \times TPI \times \frac{\text{max IPM}}{12"}$$

metric formula: maximum cutting speed (m/min) =

$$\text{part diameter (mm)} \times 3.14 \times (1/\text{pitch}) \times \frac{\text{max mm/min}}{1000\text{mm}}$$

■ Recommendation for Threading Infeed Passes

TPI	48-32	28-24	20-16	14-12	11.5-9	8-6	5-4	3-2
metric pitch (mm)	0,50-0,75	0,80-1,0	1,25-1,5	1,75-2,0	2,5-3,0	3,5-4,0	4,5-6,0	8,0

thread type	recommended number of passes							
Common V-thread forms ISO, UN, UNJ, NPT, Whitworth, BSPT, API Rotary Shoulder	4-5	5-6	6-8	8-10	9-12	12-15	14-16	15-25
Acme, Trapez, Round, API Round	—	—	5-6	7-8	10-11	12-13	13-15	18-20
Stub Acme, API Buttress	—	—	5	5-6	7-8	8-10	10-12	14-16
American Buttress	—	—	7-8	9-10	11-12	13-15	17-19	22-24

NOTE: Maintain minimum .002" (0,05mm) infeed on last passes to avoid workhardening and excessive abrasion of the threading tool.

Constant Volume Infeed Values for Threading Operations

In most applications, use of CNC canned cycles produces only marginally successful results. This is the case as these programs do not satisfy the .002" (0,05mm) minimum depth of cut specification recommended.

Example:

Infeed per pass formula: accumulated depth = initial DOC x $\sqrt{\#}$ pass
 For example, an 8-pitch external thread has a depth of .0789" (2mm).
 25% of .0789" (2mm) = approximately .0197" (0,50mm)
 (This is the infeed/DOC for the first pass.)

.0197" (0,500mm) x $\sqrt{2}$ = .0278" (0,708mm)

.0278" (0,708) - .0197" (0,500mm) = .0082" (0,207mm)
 (This is the infeed/DOC for the second pass.)

.0197" (0,500mm) x $\sqrt{3}$ = .0341" (0,867mm)

.0341" (0,867mm) - .0278" (0,708mm) = .0063" (0,159mm)
 (This is the infeed/DOC for the third pass.)

.0197" (0,500mm) x $\sqrt{4}$ = .0394" (1,001mm)

.0394" (1,001mm) - .0341" (0,867mm) = .0053" (0,134mm)
 (This is the infeed/DOC for the fourth pass.)

Using Radial Infeed

Bending stress on the cutting edge caused by V-shaped chips from long-chipping steel workpiece materials.

High cutting forces with small cutting thicknesses require sharp edges with high strength.

Its application is recommended for tough and hard, wear-resistant carbides with good resistance to thermal and mechanical shocks.

Using Flank Infeed

Lower bending stress and stabilized cutting edges produce more favorable chip shapes and larger cutting thicknesses.

Carbides with high hardness, good wear resistance, and temperature stability are advantageous.

When turning short threads with short engagement times, there is a good resistance to thermal and mechanical shocks.

Guidelines for Infeeds:

How to Determine the Number and the Size of Passes

The number of passes "s" per thread is decisive for successful threading and crest turning. The following tables give standard values for the application condition when machining steel. The proper number of passes must be determined empirically.

If insert breakage occurs, the number of passes must be increased. With increased wear, we recommend decreasing the number of passes. The chip thickness should not be less than .0019" (0,05mm). The allowance at the diameter should not exceed .0078" (0,2mm).

■ Screw Thread Definitions

1. **Major diameter** — The largest diameter of a straight screw thread. This applies to both internal and external threads.
2. **Pitch diameter** — On a straight thread, it is the diameter which passes through the thread profiles at such points which make the thread width of the groove equal to one-half of the basic pitch. On a “perfect thread,” this occurs at the point where the widths of the thread and groove are equal.
3. **Thread angle (included)** — The included angle between the individual flanks of the thread form.
4. **Minor diameter** — The smallest diameter of a straight screw thread. This applies to both internal and external threads.
5. **Lead angle** — On a straight thread, the lead angle is the angle created by the helix of the thread at the pitch diameter with a plane perpendicular to the axis.
6. **Lead** — The distance a screw thread advances axially in one revolution. On a single start, the pitch and lead are identical. The lead is equal to the pitch times the number of starts.
7. **Pitch** — The distance from a point on a screw thread to a corresponding point on the next thread measured parallel to the thread axis.
8. **Crest** — The outer most surface of the thread form which joins the flanks.
9. **Root** — The inner most surface of the thread form which joins the flanks.

NOTE: Threads per inch (TPI) not shown.
The number of threads per inch measured axially.
The terms pitch and TPI are often used interchangeably.
TPI = 1/pitch

Threading

■ LT Threading Toolholders

In all cases, the proper shim selection is important.

Kennametal toolholders are supplied with a shim for a 1.5° lead angle. Change the shim if your thread is more than 1° different. For more details on proper shim selections, see pages E105–E107.

■ LT Threading Shim Catalog Numbering System

1-1/4 Thread Size	8 Number of threads per inch	UNX	2 Thread Class	A	LH	(21) Thread Gaging System
Thread form, series, and tolerance formulation symbol			1 = Allowance and tolerance 2 = Allowance and tolerance 3 = Tolerance only 4 = Interference fit	A = External thread B = Internal thread	LH = Left-hand thread (threads are right hand unless specified)	
21 = 22 = Per ANSI B1.3 23 =						

NOTE: For shims and shim kits, see pages E105–E107.

Common Thread Forms

ISO M (Metric) and UN (Unified National)

Use: All branches of mechanical industry.

UNJ (controlled root radius)

Use: Aircraft and space industry.

Whitworth (BSW)

Use: Fittings and pipe couplings for gas, water, and sewer lines (replaced by ISO).

American Buttress

Use: Fittings and pipe couplings.

NPT (American National Pipe Thread)

Use: Fittings and pipe couplings.

BSPT (British Standard Pipe Thread)

Use: Pipe thread for steam, gas, and water lines.

TR DIN 103

Use: Mechanical industry for motion transmission screws.

Acme

A = 0,0307 P
B = 0,3707 P—x D play
C = 0,3707 P—(D1 play—D2 play)
Use: Acme-General is used in mechanical industry for motion transmission screws.

Acme, truncated (Stub)

A = 0,4224 P
B = 0,4224 P—x D play
C = 0,4224 P—(D1 play—D2 play)
Use: Where normal Acme is too deep.

API Rotary Shoulder Connection

NOTE: Taper shown exaggerated.

API Casing and Tubing Round Thread Form

NOTE: Taper shown exaggerated.

API Buttress

■ Threading Method and Hand of Tooling

Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

hand of thread

hand of toolholder

hand of insert

Feed Direction Toward the Chuck • Standard Helix

external left-hand thread

external right-hand thread

internal left-hand thread

internal right-hand thread

Feed Direction Away from the Chuck • Reverse Helix

external right-hand thread

external left-hand thread

internal right-hand thread

internal left-hand thread

NOTE: Top Notch threading bars require opposite hand insert and clamp.
Right-hand bar requires left-hand insert and clamp.
Left-hand bar requires right-hand insert and clamp.

Threading

The following charts list the largest thread pitch that can be applied on internal applications using Top Notch threading inserts for 60° V-threading and Acme threading.

Inch-Sized 60° V-Threading Limits

internal threading limitations
NT-1, NT-2 V-threading inserts

TPI	nominal thread size		minimum minor diameter (inch)	
	NT-1	NT-2	NT-1	NT-2
6	1-7/8	—	1.695	—
7	1-3/4	—	1.595	—
8	1-5/8	—	1.490	—
9	1-9/16	—	1.442	—
10	1-1/2	15/16	1.392	.830
11	1-7/16	15/16	1.339	.830
11-1/2	1-3/8	15/16	1.281	.830
12	1-3/8	9/16	1.285	.472
13	1-5/16	9/16	1.229	.472
14	1-1/4	9/16	1.173	.472
16	1-1/4	9/16	1.182	.472
18	1-1/8	9/16	1.065	.472
20	1-1/8	1/2	1.071	.440
24*	1-1/16	1/2	1.017	.440

*Twenty-four threads per inch and finer can be cut with an NT-2 insert provided the minor diameter is 1.000" or larger (.440" or larger with NT-1).

internal threading limitations
NT-3, NT-4 V-threading inserts

TPI	nominal thread size	minimum minor diameter (inch)
4-1/2**	2-7/8	2.634
5	2-3/4	2.534
6	2-1/2	2.320
7	2-1/4	2.095
8	2	1.865
9	1-15/16	1.817
10	1-7/8	1.767
11	1-13/16	1.714
11-1/2	1-3/4	1.656
12	1-3/4	1.660
13	1-5/8	1.542
14	1-9/16	1.485
16*	1-7/16	1.370

*Sixteen threads per inch and finer can be cut provided minor diameter is 1.370" or larger.

**NT-4 insert only.

Metric-sized 60° V-Threading Limits

internal threading limitations
NT-1, NT-2 60° V-threading inserts

TPI	nominal thread size		minimum thread diameter (mm)	
	NT-1	NT-2	NT-1	NT-2
4,00	M48 x 4.00	—	43,67	—
3,00	M42 x 3.00	—	38,75	—
2,50	M39 x 2.50	M24 x 2,50	36,29	21,29
2,00	M33 x 2.00	M15 x 2,00	30,84	12,84
1,75	M32 x 1.75	M15 x 1,75	30,11	13,11
1,50	M32 x 1.50	M15 x 1,50	30,38	13,38
1,25	M29 x 1.29	M14 x 1,25	27,65	12,65
1,00*	M27 x 1.00	M14 x 1,00	25,92	12,92
0,75	M22 x 0.75	M12 x 0,75	21,19	11,19

*Thread pitch of 1mm and less can be cut with an NT-2 insert provided the core thread diameter is 25mm or larger (11mm or larger with NT-1).

internal threading limitations
NT-3, NT-4 60° V-threading inserts

TP	nominal thread size	minimum thread diameter (mm)
5,50**	M73 x 5.50	67,05
5,00	M70 x 5.00	64,59
4,00	M64 x 4.00	59,67
3,00	M52 x 3.00	48,75
2,50	M48 x 2.50	45,29
2,00	M42 x 2.00	39,84
1,75	M40 x 1.75	38,11
1,50*	M38 x 1.50	36,38

*Thread pitch of 1,5mm and less can be cut provided core thread diameter is 35mm or larger.

**NT-4-insert only.

Acme Threading Limits

internal threading limitations
NA and NAS-2, -3, -4, and -6 Acme threading inserts

TPI	nominal thread size	minimum thread diameter	
		NT-1	NT-2
2**	5	4.500	114,3
2-1/2**	4-1/2	4.100	104,1
3**	4	3.665	93,1
4	3-1/2	3.250	82,6
5	3	2.800	71,1
6	2-1/2	2.333	59,3
8	2-1/4	2.125	54,0
10	2	1.900	48,3
12	1-3/4	1.667	42,4
14	1-5/8	1.554	39,5
16*	1-1/2	1.438	36,5

*Sixteen threads per inch and finer can be cut provided minor diameter is 36,5mm (1.438") or larger.

**NA-6 insert only.

Additional secondary clearance can be ground on leading edge of insert to provide sufficient helical clearance for machining coarser threads and multistart threads. Modified standard inserts may be furnished for machining threads outside of the limits shown.

Threading

60° V-Thread Crest Turning Application Data

feed direction

NTC crest turning insert for 12 threads per inch and finer ($P \leq 2\text{mm}$)

feed direction

NTC crest turning insert for 11 threads per inch and coarser ($P \geq 3\text{mm}$)

“J” thread note for catalog

The controlled root radius thread form (SAE8879C) is defined for the external thread only. To machine the corresponding internal thread, choose any insert that will cut a unified class 2B thread, then bore the minor diameter to size. Refer to SAE8879C and MIL-S-8879C and SAEAS8879D for the correct “J” thread minor diameter values.

Controlled Root Radius Specifications for UNJ Threads

insert catalog number	nose radius on insert	thread radius per MIL-S-8879A

*NTB-4B insert only.

Required Information:

- External/internal operation.
- Spindle rotation/hand of thread.
- Feed direction.

Feed Direction Toward the Chuck • Standard Helix

external left-hand thread

external right-hand thread

internal left-hand thread

internal right-hand thread

Feed Direction Away from the Chuck • Reverse Helix

external right-hand thread

external left-hand thread

internal right-hand thread

internal left-hand thread

NOTE: Right-hand toolholders and bars use right-hand inserts.
 Left-hand toolholders and bars use left-hand inserts.

Threading

External Threading Operation Example

Required Information

From Part Drawing:

material: 316SS, 200 HB
thread form: 8UN Class 2A
operation: external threading
pitch diameter: 2.00" x 1.00" deep

From Machine Setup Data:

tooling: .750" x .750"
spindle rotation: counterclockwise
feed: toward chuck

Steps for a Successful Threading Operation

Step 1 •

Determine Threading Method

Need to Know:

- Operation (external).
- Spindle rotation (CCW).
Counterclockwise rotation.
- Feed direction (toward chuck).
- Right-hand toolholder.
- Right-hand insert (ER).
- Standard helix method.

Step 2 •

Select Insert

Need to Know:

- Thread form (8 UN Class 2A).
- Hand of insert (right hand — ER).

Choose the High-Performance Solution

catalog number	insert size	KC5010
3ER8UN	3"	●

High-Performance Selection

NOTE: Use insert with largest IC available.

insert: LT-16ER-8UNCB
grade: KC5010
speed: 500 SFM

Step 3 •

Select the Grade and Speed

Need to Know:

- Workpiece material (316SS-200HB).
- Operation (external).

Options: Grade and Speed
Selection Guidelines

threading operation	stainless steel	
	general purpose	style
external	KC5025	CB
	150–450 SFM	
	high-performance	style
	KC5010	CB
	200–650 SFM	

Step 4 •

Select Toolholder

Need to Know:

- External or internal operation (external).
- Pitch diameter to determine minimum bore diameter (N/A).
- Type of tooling — toolholder, boring bar (toolholder).
- Hand of tool (right hand).
- Insert size (3/8").

Options:

catalog number	gage insert	shim
LSASR-123	LT-16ER	SM-YE3
LSSR-123	LT-16ER	SM-YE3

First choice: LSASR-123 holder

Step 5 •

Select Shim

Need to Know:

- Thread form — TPI or pitch (8 TPI).
- Pitch diameter (2").
- Helix method (standard).
See LT shim selection chart.

Select SM-YE3 shim

NOTE: The SM-YE3 shim is supplied with the selected toolholder.

NOTE: Optimize your operation by using a constant infeed or the constant volume method with a minimum infeed of .005 and an infeed angle of 29-1/2°.

Required Information

From Part Drawing:

material: 4140 steel
thread form: 16 TPI UN
operation: internal threading
pitch diameter: 1.5" x 2" deep

From Machine Setup Data:

tooling: .075" boring bar
spindle rotation: clockwise
feed: away from chuck

Steps for a Successful Threading Operation

Step 1 • Determine Threading Method

Need to Know:

- Operation (internal).
- Spindle rotation (CW).
Clockwise rotation.
- Feed direction (away from chuck).
- Left-hand toolholder.
- Left-hand insert (NL).
- Reverse helix method.

Step 2 • Select Insert

Need to Know:

- Thread form (16UN Class 2A).
- Hand of insert (left hand — NL).

Choose the High-Performance Solution

catalog number	insert size	KC5025
LT-11NL-16UN	1/4"	●
LT-16NL-16UN	3/8"	●

High-Performance Selection

NOTE: Use insert with largest possible IC to go into the bore.

insert: LT-16NL-16UN
grade: KC5025
speed: 450 SFM

Step 3 • Select the Grade and Speed

Need to Know:

- Workpiece material (4010 steel).
- Operation (internal).

Options: Grade and Speed
Selection Guidelines

threading operation	steel
internal	general purpose and high performance
	KC5025
	100–550 SFM

Optimize your operation by using a constant infeed or the constant volume method with a minimum infeed of .005 and an infeed angle of 29-1/2°.

Step 4 • Select Toolholder

Need to Know:

- External or internal operation (internal).
- Pitch diameter to determine minimum bore diameter for internal operations (1.5").
- Type of tooling — toolholder, boring bar (boring bar).
- Hand of tool (left hand).
- Insert size (3/8").

Options:

catalog number	insert size	minimum bore diameter	shim
S1212-LSEL3	3"	.90	SM-YE3
S0812-LSEL2	2"	.65	—

First choice: S1212-LSEL3 bar

Step 5 • Select Shim

Need to Know:

- Thread form — TPI or pitch (16 TPI).
- Pitch diameter (1.5").
- Helix method (reverse).
See LT shim selection chart.

Select SM-YE3-2N shim

NOTE: Shim supplied with selected boring bar is not correct; order correct shim.

■ LT Threading Shim Selection Guidelines

The following questions must be answered before a successful threading operation can begin:

- | | |
|---|--|
| <p>A — Select your method of thread cutting:</p> <ul style="list-style-type: none"> • Machining toward the chuck (standard helix). • Machining away from the chuck (reverse helix). <p>B — Select lead angle and choose shim.</p> <p>C — Select insert and toolholder size.</p> | <p>D — Select insert grade.</p> <p>E — Select speed.</p> <p>F — Select number of thread passes.</p> <p>G — Select infeed method.</p> |
|---|--|

NOTE: When considering method of thread cutting, the part's shape and stability and the flow of chips are determining factors in your decision.

LT Selection Chart

NOTE: For multistart threads, use the lead value instead of the pitch.

Threading

Diagram of Thread Lead Angles

To calculate the lead angle of a given thread, use this formula:

$$\beta = \text{Arctan} \frac{P \cdot S}{\pi D_e}$$

β = thread lead angle
 D_e = effective pitch diameter of thread wear
 P = 1/TPI
 S = number of starts
 single-start, lead = pitch
 multistart, lead = pitch (x) number of starts

All toolholders are designed with an inclination angle = 1.5°. When turning standard threads with a lead angle of 1–2°, this guarantees adequate clearance at the flanks of the insert's thread tooth. The thread lead angle and the required inclination angle of the insert are given by β .

Cutting edge height is constant at every shim and insert combination. All toolholders are supplied with 1-1/2° lead angle.

NOTE: Arctan equals Tan-1 (see chart below for approximate lead angles).

LT Selection Chart

Standard Helix Method:

Used when RH thread is cut with RH tool or LH thread with LH tool.

Reverse Helix Method:

Used when RH thread is cut with LH tool or when LH thread is cut with RH tool. Dimension "H" is constant at every shim and insert combination. All toolholders are supplied with 1.5° lead angle.

Beyond BLAST™ • The First Through-Insert Coolant Delivery System from Kennametal

We didn't just improve metalcutting technology. We reinvented it.

Introducing Beyond BLAST, a revolutionary insert platform that delivers many of the benefits of high-pressure systems at conventional coolant pressures. Advanced coolant-application technology makes cutting more efficient and effective — while extending tool life. This tool is specifically designed for working with titanium and other high-temp alloys.

Features and Benefits

Higher Productivity, Extended Tool Life

- Increased tool life up to 300%, depending on the insert geometry and cutting conditions.
- Significant productivity and tool life increase in titanium machining.
- Higher metal removal rates and reduced cycle time.
- Chipbreaker design in combination with Precision Coolant Technology (PCT) provides excellent chip control and workpiece finish.

Versatility

- Ideal for applications where productivity or tool life is limited due to excess generated heat.
- Offered as a standard item with engineered solution capabilities.
- Provides increased performance with high-pressure or low-pressure coolant delivery systems.

More than just the right tool — the ultimate solution. That's **Beyond BLAST™**

That's **Different Thinking.**

A Simple Observation, a Revolutionary Concept

We took an entirely different approach to machining high-temperature alloys. We determined that the most effective way to deliver coolant would be to channel it through the insert — ensuring that it hits exactly where it does the most good. That means more efficient coolant delivery at a fraction of the cost of high-pressure coolant systems.

By precisely controlling coolant application, Beyond BLAST™ allows you to lower your energy consumption, saving you even more money and reducing your impact on the environment.

*To learn more, [scan here](#).
For instructions on how to scan, please see page xxix.*

Beyond BLAST System

- Beyond BLAST delivers coolant directly and precisely to the cutting edge.
- Effective thermal management, higher speeds and reduced cycle times can be achieved.
- Delivers many of the benefits of high-pressure systems at low pressure.
- Provides increased performance with high-pressure or low-pressure coolant delivery systems.

Beyond BLAST for turning increases tool life by up to 300% compared with conventional coolant delivery systems.

Application Specific

Coolant Application

Typical cooling applications often miss the point of highest heat, generated where the tool shears the material. Hitting chips after they have formed proves typical cooling applications can even work at cross-purposes by forcing chips back into the cut, accelerating tool wear. Part of the problem is that the coolant-delivering nozzle is located relatively far from the workpiece.

Beyond BLAST with Precision Coolant Technology (PCT)

With Beyond BLAST, coolant is delivered through the insert, at the interface of the tool and the workpiece material, offering the best of both worlds.

Beyond BLAST with Precision Coolant Technology (PCT) features through-insert cooling. It delivers coolant much closer to the tool/chip interface. Coolant pressure remains adjustable. Since the coolant is delivered through the insert, coolant delivery is more reliable and controlled, significantly reducing temperatures at the point of the cut.

Application Data

The illustrations below show Beyond BLAST turning inserts and the coolant delivery path through the turning holder and insert.

In tests involving titanium turning, Beyond BLAST inserts at 100 psi showed 75% improvement in tool life over the same inserts with flood coolant at 100 psi. In a different test to evaluate the influence of coolant pressure, tool life for Beyond BLAST at 100 psi was nearly that of identical insert geometries at 1,000 psi, delivering cutting conditions and longer tool life on par with expensive, custom high-pressure coolant delivery systems at significantly lower cost.

Test 1
62 m/min (200 SFM)

Test 2
93 m/min (300 SFM)

Result:	Over 3x tool life	Double the tool life

Product Portfolio

- KM50TS holders.
- Inch and metric square shanks.
- C- and R-shaped inserts.
- Geometries: FBB, MBB, RBB, ELF.
- Grades: KU10, KCU10.

The Fix-Perfect™ Precision Ground Insert Program Goes Above and Beyond™!

Primary Application

The breakthrough performance characteristics of these precision ground inserts enable outstanding indexing accuracy and excellent chip flow when machining steel, cast iron, and stainless steel workpiece materials.

Fix-Perfect Beyond Inserts are the ideal solution to machining operations in a multitude of industries, including fluid power, energy, automotive, heavy equipment, and general engineering applications.

Features and Benefits

Features	Functions
Tangential design.	Stable system.
Rigid clamping system.	Very stable clamping system and quick and easy cutting edge switch.
Up to eight cutting edges (protected by pocket seat).	Use up to eight edges per insert.
Positive geometry.	Very low cutting forces and excellent chip control.
Precision ground insert.	Better indexing accuracy.

Benefits

Process reliability and high productivity.

Process reliability, high productivity, and reduced machine downtime.

Higher productivity.

Low vibrations, smooth cut, silent cut, no workpiece deformation, and high surface quality.

Process reliability.

Application Specific

Fix-Perfect Tool System

With 2, 4, or 8 edges, this tool system is the ideal supplement to ISO tools.

The examples on the following page show the range of possible applications.

Use of the Fix-Perfect system results in:

- Lower cutting forces.
- Smooth, open chips.
- Larger feed rates and depths of cut.

Application Specific

(continued)

(continued)

Turning slender shafts (clamping on one side also possible) with a workpiece length outside the chuck $>8 \times D$ with high geometric accuracy and surface finish.

Machining of unstably chucked workpieces (e.g., in a swivel chuck).

External machining of thin-walled workpieces.

Turning material combinations of varying machinability, for example, aluminum combined with stainless and acid-proof steels.

Smoothing of welding seams with interrupted cuts.

Application Specific

H – Hollow-ground.

* – Deviation from old catalog number.

 ** – At mounting angle (clearance) 7°. Also 12° mounting angle possible (dependent on toolholder), then $\gamma = 20^\circ$.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

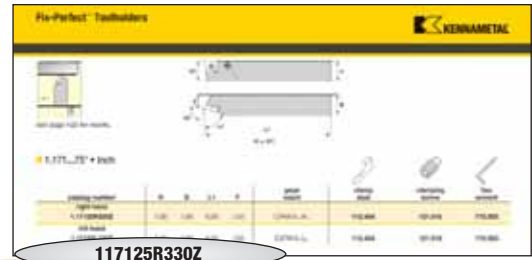

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit www.kennametal.com/carbiderecycling.

1	10,5mm	2
	12mm	8
3	14,5mm	2
	15mm	8
4	17,5mm	2
	18mm	8
5	23,5mm	2
	21mm	8
7	10,5mm	2 Alu

Features of the Fix-Perfect lathe tool system:

- Cost-effective use of inserts with up to eight positive cutting edges per insert.
- Indexable insert ground on all sides, thus requiring less cutting force.
- High stability due to upright insert for roughing and profiling tasks.
- Guaranteed rigid clamping of inserts.
- Optimum chip evacuation guaranteed.
- Cutting edges protected by insert seat.

Quick and easy cutting edge switch —
just loosen the pin, no need to remove it.

Application Specific

See page F28 for inserts.

Application Specific

Top Notch™ Profiling

Primary Application

Top Notch is the proven solution for high productivity. The Top Notch system provides consistent tool performance, accurate indexing, and superior clamping to provide excellent surface finishing and superior tool life.

Features and Benefits

- Top Notch guarantees that the insert is rigidly held.
- Stable against alternating cutting force directions, compared with customary clamping methods.
- Second cutting edge well protected against chipping.
- Precision-ground inserts guarantee high precision indexing and lower cutting forces.

■ Select the geometry —
based on feed rate and depth of cut

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

operation	insert style application	insert geometry	profile	feed rate — in (mm)											
				.0015 (0,04)	.0025 (0,063)	.004 (0,01)	.006 (0,16)	.010 (0,25)	.016 (0,4)	.025 (0,63)	.040 (1,0)	.060 (1,6)	.100 (2,5)	.200 (5,0)	
				depth of cut — in (mm)											
finishing	DCGR			.004-.012 (0,1-0,3)											
				.010-.070 (0,3-1,8)											
finishing	KCGR			.004-.012 (0,1-0,3)

smooth cut, pre-turned surface	⚙️	KC5010	KC9110	KC5010

■ Step 3 • Select the cutting speed

Steel speed — m/min (SFM) starting conditions

material group	grade	50 (170)	100 (330)	150 (490)	200 (655)	250 (820)	300 (980)	350 (1150)	400 (1300)	m/min	SFM
P	KT315									260	850
	KC9110									340	800
	KC9125									180	600
	KC8050									165	550

Stainless Steel speed — m/min (SFM) starting conditions

material group	grade	50 (170)	100 (330)	150 (490)	200 (655)	250 (820)	300 (980)	350 (1150)	400 (1300)	m/min	SFM
M	KT315									230	750
	KC5010/KCU10									180	600
	KC5025/KCU25									120	400
	KC9225									170	550
	KC8050									150	500

Cast Iron speed — m/min (SFM) starting conditions

material group	grade	150 (490)	200 (655)	250 (820)	300 (980)	350 (1150)	400 (1300)	500 (1600)	750 (2400)	m/min	SFM
K	KB1345									760	2520
	KT315									275	900
	KC5010/KCU10									245	800
	KC9315									245	800
	KC8050									230	750

Non-Ferrous speed — m/min (SFM) starting conditions

material group	grade	250 (800)	500 (1600)	750 (2400)	1000 (3200)	1250 (4000)	1500 (4800)	1750 (5600)	2000 (6400)	m/min	SFM
N	KO1425									765	2500
	KC5410									550	1800
	KC5010/KCU10									460	1500
	K68									150	500

High-Temperature Alloys speed — m/min (SFM) starting conditions

material group	grade	15 (50)	40 (120)	55 (180)	80 (250)	100 (330)	170 (550)	200 (655)	230 (750)	m/min	SFM
S	KC5010/KCU10									60	200
	KC5025/KCU25									50	170
	KC8050									70	230
	K68									30	100

◊ Represents the recommended starting conditions. Optimize for your specific application.

Application Specific

K-Lock™ Inserts

Features and Benefits

- K-Lock inserts are ideal for deep grooving and profiling.
- A unique insert clamping system enables unimpeded chip flow.
- Available in molded and ground peripheries.

Kennametal™ Tools for Railways and Wheel Machining

Kennametal offers a complete line of tooling for wheel and axle maintenance in railroad shops. All tools incorporate the latest in tooling technology for maximum metal removal and higher productivity. All tools are proven performers in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs. Included in this range are tools for reconditioning mounted wheel sets, wheel boring, wheel truing, axle turning, and journal burnishing.

Visit www.kennametal.com or contact your local Authorized Kennametal Distributor.

 **KENNAMETAL®**

Kendex™ Mini Boring Bars

Primary Application

Ground inserts in their neutral position and the precision insert pocket combine to ensure superior surface finishes. The unique system design protects the second cutting edge from damage while the first edge is in operation.

Features and Benefits

- Kendex mini boring bars are specially designed to finish bore diameters as small as .250".
- Kendex mini inserts contain two precision ground cutting edges.
- Inserts are available in uncoated and PVD coated grades.

Application Specific

Wheel Reprofilng/Wheelset Truing

Primary Application

Kennametal offers a complete line of tooling for wheel and axle maintenance in railroad shops. All tools incorporate the latest in tooling technology for maximum metal removal and higher productivity. All tools are proven performers in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs.

Features and Benefits

Versatility

Included in the new expanded line are tools for reconditioning mounted wheel sets, wheel boring, wheel turning, wheel truing, axle turning, and journal burnishing.

Advantages

Machining conditions for these tools vary with the type of service the wheel has seen. Among the problems encountered are skid flat areas, overheating of spinning wheels, accidental torch burns, excessive mushroom and rollovers that are hardened by unusual hump retarder pressure and mismatched wheels that cause excessive wear on the side of the flange. Each of these conditions require a different machining speed and depth of cut. Even under these tough conditions, Kennametal tools have produced superior results through reduced production time and lower maintenance costs.

■ Wheel Lathe Tooling

Kennametal railroad tooling incorporates a unique locking unit design developed through years of testing on all types of wheel lathes and machining wheels with all types of tread surfaces.

This heavy-duty, rugged design has proven to be effective in reducing machining costs on tread turning applications, the most severe machining operation encountered in wheel and axle shops.

Strong inserts, with raised chipbreaker land and honed cutting edges, offer more effective chip control and a stronger cutting edge. Combining this tool geometry with Kennametal's grade selection delivers higher wheel turning productivity.

■ Wheelset Reconditioning

Advantages of Kennametal Wheel Lathe Tools:

- No top clamp to wear out or interfere with chip flow.
- Insert locks against two walls in the toolholder to prevent insert movement under heavy cutting loads.
- Hardened steel locking unit provides positive insert seating and holder protection.
- Fast, trouble-free insert indexing — just unlock one screw to release the insert.
- Quick removal of the steel locking unit and insert for cleaning or replacement.
- Heavy-duty steel locking unit design ensures longer life and helps reduce operating costs.
- Fewer parts to inventory.
- Toolholders and steel locking units, made from heat-treated alloy steel, provide support to withstand severe roughing cuts on work-hardened wheels.

- Portal-type wheel lathe is a fully automatic, heavy-duty wheel lathe. An integrated measuring device determines wheel set profile wear to establish minimum stock removal.
- The portal-type machine bed enables roll-through operation.
- This tooling is suitable for economical machining of wheel sets for locomotives, transit, passenger, and freight cars.

NOTE: See page F84 for insert selection.

Application Specific

- Tools and inserts are specifically designed for the feeds and speeds normally used on this type of lathe.
- Style HUTC is used for profiling the tread contours on the wheel, and style HUFT is used for normal flange topping.
- For heavy flange topping it may be necessary to use two flange-topping tools, styles HUFT-A and HUFT-B.

Application Specific

- Delivers maximum productivity at minimum operating costs.
- Fast insert indexing is possible with the tool mounted in the tool block.
- Individual steel locking units make it easy to index and lock each insert separately.
- Gage location on tool, over insert, is held to +/- .003" (0,08mm).
- No top clamp is used so it won't wear out or interfere with chip flow.
- Replaceable steel locking unit protects toolholder from damage.
- Indexable inserts with pre-formed chipbreakers deliver chip control at optimum feeds and speeds.

NOTE: See page F84 for insert selection.

Application Specific

- Kennametal tooling for underfloor wheel lathes features a steel sliding shim unit. The sliding shim unit holds the insert securely in the pocket, ensures easy insert indexing, and is simple and economical to replace.
- The insert used in these holders, KRR-6610, features improved chip control for safer and easier chip disposal.

NOTE: See page F86 for insert selection.

Kennametal stocks a complete line of standard inserts for wheel and axle machining. Inserts are available in various styles, sizes, and grades.

- **Wheel boring** – molded chipbreaker inserts in round, square, octagon, and grindable inserts.
- **Axle turning** – triangle- and diamond-shaped inserts with chipbreakers.
- **Wheel turning** – rectangular and square styles, with or without molded chipbreakers.
- **Wheel truing** – round buttons with center hole for locking.

Application Specific

Kennametal Tools for Railways and Wheel Machining

Primary Application

Kennametal offers a complete line of tooling that incorporates the latest technology for maximum metal removal and higher productivity. All tools perform in actual use over extended periods of time, under a wide range of operating conditions. Standard off-the-shelf inserts and fewer pieces of hardware reduce inventory and operating costs. Tools in this range are for reconditioning mounted wheel sets, wheel boring, wheel truing, axle turning and journal burnishing.

Features and Benefits

Machining conditions vary with the wheel's type of service. Reduced production time and lower maintenance costs produce superior results even under these tough conditions.

- Skid flat areas.
- Accidental torch burns.
- Overheating of spinning wheels.
- Excessive mushroom and rollovers that are hardened by unusual hump retarder pressure.
- Mismatched wheels that cause excessive wear on the side of the flange.

Each of these conditions requires a different machining speed and depth of cut.

Advantages of Wheelset Reconditioning with Kennametal Wheel Lathe Tools.

- Heavy-duty steel locking unit ensures longer life and reduces operating costs.
- No top clamp to wear out or interfere with chip flow.
- Hardened-steel locking unit locks the insert against two walls in the toolholder to prevent insert movement under heavy cutting loads.
- Quick removal of the steel locking unit.
- Fast trouble free insert indexing.
- Made from heat-treated alloy steel to withstand severe roughing cuts on work-hardened wheels.

■ **L-Type Boring Bars**

Railroad wheels are wrought steel and cast steel made in a number of designs. Steel wheels are classified as multiple-wear, two-wear, or one-wear wheels.

Composition and specifications of wheels include Class A, a relatively low carbon steel wheel; Class L, a lower carbon content than Class A; Class B, an intermediate carbon steel; and Class C, a relatively high-carbon steel wheel.

Kennametal provides L-type bar tooling to bore wheels to match journal sizes from 4 1/2" x 8" to 8" x 16".

- Tools are precision ground and hardened for maximum life.
- Lower profile permits use in L-type bars without modification.
- Fast insert indexing reduces tool changing downtime.
- Enables free cutting action at higher feed rates.
- Delivers good chip control under a wide range of conditions.
- Inserts are available in both coated and uncoated grades.
- Kennametal also provides cartridges to fit Kennametal-supplied bars to run on CNC boring machines.
- Most bars and cartridges are supplied as specials per machine manufacturers' specifications.

Application Specific

- Uses OPG-524 positive rake, octagonal inserts for free cutting action while finish boring.
- Tool positions the insert parallel to the bore in the operation.
- Consistently produces bore finishes to specifications.
- Inserts have eight indexable cutting edges.
- Available in 11 sizes to fit L-type boring bars.

■ **OWF-Style Tools for Roughing**

order number	catalog number	min wheel bore		H		B		L1		journal size	insert 1	shim	shim screw	clamp	clamp screw

NOTE: Tool sets contain a ground matched pair of toolholders.
See page F97 for insert selection.

- Uses SNMG-style molded chipbreaker inserts with eight cutting edges.
- Available in 11 sizes to fit L-type boring bars.
- Employs a low-profile design.
- Delivers fast insert indexing while maintaining bore size.
- Tools have a protective insert seat.

■ SWR-Style Tools for Roughing

NOTE: Tool sets contain a ground matched pair of toolholders.
See page F96 for insert selection.

- Available in the rugged unit locking design for operating at higher feed ranges.
- Unit locking design ensures maximum insert locking by pulling the insert down and back into the pocket.
- Locking unit protects the holder and properly seats the insert.
- Insert can be released quickly for fast indexing, minimizing downtime.
- Available in 11 sizes to fit L-type boring bars.

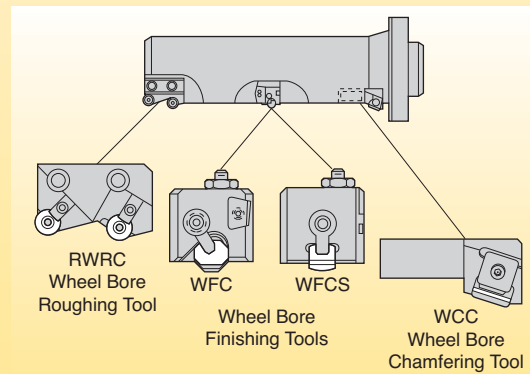

■ RUWR-Style Tools for Roughing

NOTE: Tool sets contain a ground matched pair of toolholders.
See page F96 for insert selection.

■ **Advantages of Kennametal Wheel Boring Tools**

- Available in several styles for rough and finish boring.
- Tools are available for finishing KRR- or OPG-style inserts.
- Rough boring tools use RCMH round inserts.
- Tools keep the insert parallel to the bore during operation to ensure a smooth cut within established finish specifications.
- All styles of tools are designed with insert locking confined within the shank height. This enables the tools to be retracted to bore the smaller sizes without modifying the standard bar.
- Check the catalog number and dimensions of your cartridges before ordering. Bars and cartridges on older machines may not be the same. Call Kennametal's Customer Application Support team for assistance.

Application Specific

- Uses RCMH-style inserts for free cutting action while rough boring.
- This is a double-pocket cartridge and requires two inserts and two sets of hardware.
- Cartridges are easily replaceable.

■ Axle Turning Tools

Freight car and passenger car axles are usually made of carbon steel and may be heat treated or untreated. Locomotive axles, electric transit axles, and industrial-use axles are made of a variety of carbon and alloy steels. The alloy steel axles are heat treated, while the carbon steel axles are either heat treated or untreated.

Kennametal offers two styles of holders to suit user needs for re-machining journal surfaces on car axles.

- These two standard designs use indexable inserts and have a 3° lead built into the holder to conform to the AAR standards.
- To use these tools in some dual-end-drive axle lathes, a slight modification to the existing tool block is necessary. This is required to clear the head portion of the tool to generate the required radius on the axle.
- Kennametal offers a wide variety of standard off-the-shelf tooling as well as special tooling for all types of machining applications on various machines for reconditioning axles.

- Steel locking unit design ensures maximum insert locking pressure.
- Insert locks firmly in place against the one-wall pocket for fast insert indexing.
- Locking unit protects holders and provides secure seating for the insert.
- Indexable inserts eliminate regrinding.
- Uses 1/2" IC triangular inserts that provide up to six cutting edges.

Application Specific

New Railroad Wheel Manufacturing Tooling

Features and Benefits

Wheel Production

In wheel production, the forged blanks are mainly machined using RC.. inserts.

For this, Kennametal offers a comprehensive range of high-performance indexable inserts. Proprietary coatings combined with application-specific chipbreakers make these inserts well suited for new wheel production.

Together with the KM™ quick change tooling system, high stability, repeatability, and process security are ensured.

Clamping System

Our Fix-Perfect™ clamping system will provide optimum security during the most arduous machining process. With just a few revolutions of the clamping screw, the complete insert set (insert, shim, and clamping stud) can be changed.

Kennametal Select • The Inserts You Want at a Price You'll Love

Introducing Kennametal Select inserts — the cost-effective line from the brand you already know and trust for quality. Each insert is engineered and manufactured by Kennametal to outperform competitive inserts when cutting steel, stainless steel, cast iron, and high-temperature alloys. These inserts can be used in an incredible 80% of all applications. This versatility, along with the simple grade selection method and great price, make Kennametal Select inserts perfect for small and midsize turning operations.

Features and Benefits

Getting the Most from Every Insert

Kennametal Select products make it simple to get the most out of your inserts, and your money. Every insert is gold, which exposes wear as the tool continues to be used — making it easy to detect when an insert is ready to be changed — maximizing the product's value and protecting the workpiece. Also, because Kennametal Select inserts can be used in most applications, a single insert can take on any number of tasks, thus reducing your inventory. Kennametal Select products are also reliable enough to cut steel, stainless steel, cast iron, and high-temperature alloys, enabling quick changes in workpiece materials without the need to swap inserts, saving time and money.

Best Way to Save

Kennametal Select inserts were developed to make it easy for small and midsize turning operations to utilize an affordable, quality product with greater durability than competitively listed products. Kennametal Select inserts ensure an overall reduction of tooling costs. Purchasing Kennametal Select inserts through one of our distributor partners or online, can save as much as 50%.

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Application Specific

Step 1 • Select the insert geometry

Negative Inserts

-F
Finishing

-M
Medium

-R
Roughing

Positive Inserts

-GT-F/MT-F
Finishing

Application Specific

Step 2 • Select the grade

cutting condition	Negative Insert Geometry			Positive Insert Geometry	
	-M	-R	-F	GT-F	MT-F
heavily interrupted cut	K25M	K25M	K10M	K25M	K25M
lightly interrupted cut	K25M	K25M	K10M	K25M	K25M
varying depth of cut, casting, or forging skin	K10M/K25M	K10M/K25M	K10M	K10M/K25M	K10M/K25M
smooth cut, pre-turned surface	K10M	K10M	K10M	K10M	K10M

Step 3 • Select the cutting speed

Austenitic Stainless Steel speed — m/min (SFM) starting conditions

material group	grade	90 (300)	135 (450)	180 (600)	225 (800)	270 (900)	315 (1050)	360 (1200)	405 (1350)	450 (1500)	m/min	SFM
M1	K10M										162	540
	K25M										135	450
	K10U										194	630
	K15U										129	420

Austenitic Stainless Steel speed — m/min (SFM) starting conditions

material group	grade	90 (300)	135 (450)	180 (600)	225 (800)	270 (900)	315 (1050)	360 (1200)	405 (1350)	450 (1500)	m/min	SFM
M2	K10M										149	495
	K25M										135	450
	K10U										180	585
	K15U										120	390

Austenitic Stainless Steel: Duplex (Ferritic and Austenitic Mixture) speed — m/min (SFM) starting conditions

material group	grade	90 (300)	135 (450)	180 (600)	225 (800)	270 (900)	315 (1050)	360 (1200)	405 (1350)	450 (1500)	m/min	SFM
M3	K10M										135	450
	K25M										108	360
	K10U										167	540
	K15U										111	360

■ Step 1 • Select the insert geometry

Negative Inserts

-F
Finishing

..MA
Heavy Roughing

-H
Heavy Roughing

Positive Inserts

MT-F
Finishing

■ Step 2 • Select the grade

cutting condition	Negative Insert Geometry			Positive Insert Geometry
	..MA	-H	-F	MT-F
heavily interrupted cut	K20K	K20K	K20K	K20K
lightly interrupted cut	K20K	K20K	K20K	K20K
varying depth of cut, casting, or forging skin	K20K	K20K	K20K	K20K
smooth cut, pre-turned surface	K20K	K20K	K20K	K20K

■ Step 3 • Select the cutting speed

Gray Cast Iron		speed — m/min (SFM)									starting conditions	
material group	grade	60 (200)	150 (500)	240 (800)	330 (1100)	420 (1400)	510 (1700)	600 (2000)	690 (2300)	780 (2600)	m/min	SFM
K1	K20K										270	900

Ductile, Compacted Graphite, and Malleable Cast Irons (<80 KSI tensile strength)		speed — m/min (SFM)									starting conditions	
material group	grade	60 (200)	150 (500)	240 (800)	330 (1100)	420 (1400)	510 (1700)	600 (2000)	690 (2300)	780 (2600)	m/min	SFM
K2	K20K										216	720

Ductile, Compacted Graphite, and Malleable Cast Irons (>80 KSI tensile strength)		speed — m/min (SFM)									starting conditions	
material group	grade	60 (200)	150 (500)	240 (800)	330 (1100)	420 (1400)	510 (1700)	600 (2000)	690 (2300)	780 (2600)	m/min	SFM
K3	K20K										189	630

Application Specific

Step 1 • Select the insert geometry

Negative Inserts

-F
Finishing

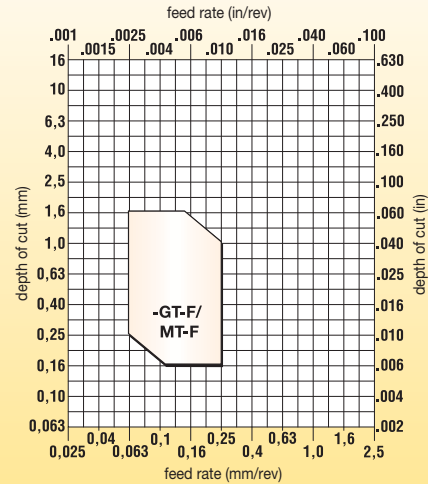

..GP
Medium

Positive Inserts

GT-F/MT-F
Finishing

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit www.kennametal.com/carbiderecycling.

Select the Correct Holemaking Solution for Your Application

Added Value for Your Performance

Increase of Productivity and Efficiency

- Material and application-specific solutions.
- Maximum metal removal rates and repeatability.
- Standardized design platforms for special tools based on “proven solutions” for individual optimizations and combination tools.

Control of Total Tooling Costs

- High tool utilization through material and application specific solutions.
- Process-safe regrinding service.
- Reduction of stocks through efficient modular concepts.
- Multiple platforms per application to achieve the most cost-efficient solution.

NOTE: Solid Carbide Drills from Kennametal in short and regular lengths conform to DIN 6537.
Drills with long lengths conform to Kennametal factory standard.
Solid Carbide Drills with diameter D1>20mm (not DIN 6537) are also standardized to factory standard.

■ Tolerances of Drills and Holes

Solid carbide drills with tolerance of m7 (SE Drill, TF Drill, KU Drill) create holes with tolerances of H9. H8 can be achieved in very good conditions. The TX Drill should be used for holes in H8, in favorable conditions H7 can be achieved.

Solid carbide drills (BF Drill) with h7 create holes in JS9–JS11. Other drilling tolerances require special solid carbide drill versions.

■ Tolerances of Drills and Holes

Solid carbide drills with tolerance of m7 (SE Drill, TF Drill, KU Drill) create holes with tolerances of H9. H8 can be achieved in very good conditions. The TX Drill should be used for holes in H8, in favorable conditions H7 can be achieved.

Solid carbide drills (BF Drill) with h7 create holes in JS9–JS11. Other drilling tolerances require special solid carbide drill versions.

GODrill™ • Kennametal's First Microdrill

The high-performance solid carbide drill tailored for very small- to medium-diameter drilling applications.

Primary Application

The all new GODrill addresses drilling operations in a diameter range of 1–12,7mm (.0394–.5") in a broad variety of materials and applications such as fuel systems or medical components. Due to its very unique design, the GODrill expands the advantages of modular drills into the small diameter range: high-end grades, wear-indicator coating, and new, proprietary geometries enable full utilization of the drill's tool life capacity. The GODrill qualifies as a very cost-effective, throwaway-type tool in the given diameter range.

Features and Benefits

GODrill Design

- Marginless design for reduced friction and heat — thus longer tool life.
- Very versatile tool works in a wide range of materials.
- Cost effective, no regrind logistics.
- No setup.
- Throw away or recycle.
- Through-coolant option down to diameter 1,5mm (.0591").

CPG Point

- Optimized gashing design for microdrilling ensures free flow of chips in the center of the drill.
- Excellent centering capabilities.
- Reduced axial forces.
- Good hole quality, roundness, and cylindricity for all materials.

KC7325™ Grade

The grade contains a double coating:

- The multilayer, TiAlN-based coating with high hot hardness enables the drill to run at high cutting speeds as well as in MQL applications.
- A TiN top layer serves as wear indicator for easier monitoring on small drills, which can be difficult to see.
- Improved visibility of wear helps to utilize the tool's full tool life capacity.

Solid Carbide Drills

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

TF Drills for High Metal Removal Rates

Primary Application

B/K105 Solid Carbide Drills are ideal for high metal removal rates and excellent hole quality in short chipping materials such as gray cast iron, ductile iron, and aluminum as well as in short-hole titanium applications.

Features and Benefits

Three Cutting Edges

- Higher feed rates than with two-edged drills.

Three Spacious Flutes

- Rapid chip evacuation.
- Three-margin lands deliver better hole quality and straightness than two-flute drills.

Wear-Resistant Carbide Grade

- High tool life in abrasive materials such as cast iron and aluminum die cast alloys.

TiAlN-Coated KC7210™ Grade

- Higher wear resistance at elevated speeds.

Uncoated K10™ Grade

- The uncoated grade helps to prevent built-up edge in drilling aluminum and high-temp alloys.

Customization

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as custom solutions.

TF Drills with Through Coolant for Titanium Materials

Primary Application

B/K125 Solid Carbide Drills are specifically designed for titanium and titanium alloy workpiece materials.

Features and Benefits

Three Cutting Edges

- Higher feed rates than two-edged drills.

Three-Flute Design

- Three-margin lands deliver better hole quality and straightness than two-flute drills.

Through-Coolant Design

- Improved chip evacuation enables deeper holes.
- More effective cooling of the cutting edges and longer tool life.
- Lubrication of the margin lands and better hole surface quality.

Fine-Grained Carbide Grade

- Optimum combination of toughness and wear resistance for titanium drilling applications.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

HP Beyond™ Drills with Through Coolant for Stainless Steel

Primary Application

B/K210_HP Series Solid Carbide Drills are designed specifically for stainless steel applications, offering high performance and long tool life in regular steel and titanium materials. By combining unique Kennametal technologies, such as the HP-point, flute geometry, and a new post-coat treatment technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.

Unique Flute Design

- Improved chip evacuation.
- Capability to drill deeper holes in difficult-to-machine materials.

KCM15™ Beyond Grade

- A nanolayer, TiAlN-based coating with high wear resistance and low adhesion to stainless steel materials.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- The average metal removal rate and tool life dramatically improve (minimum 10–30%).

Customization

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as engineered solutions.
- High step diameter ratios and very complex step drill geometries are not recommended for austenitic stainless steel.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B21_HP is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank, please refer to the e-catalog on www.kennametal.com.

Solid Carbide Drills

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

HP Beyond™ Drills for Steel

Primary Application

B221_HP Series Solid Carbide Drills offer the highest metal removal rates and longest tool life in steel and iron materials when dry cutting or using external flood coolant. Dry drilling up to 5 x D possible.

B224_HP Series Solid Carbide Drills are ideal for super high-speed drilling of unalloyed and alloyed steel. Achieve 100% higher cutting speed without compromising tool life. Operate these drills with standard through coolant or MQL.

By combining unique Kennametal technologies, such as the HP-point, flute geometry, and a new Beyond grade technology into one tool, the B2_HP Beyond is the ultimate high-volume production tool.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.

Unique Flute Design

- Improved chip evacuation in dry and mid L/D drilling operations.
- Better hole surface quality.

KCPK15™ Beyond Grade

- The grade is a multilayer, TiAlN-based coating with high hot hardness. High cutting speeds enable use in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- The average metal removal rate and tool life performance improved dramatically (10–30%).

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- For holes deeper than 5 x D, internal coolant is recommended.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B22_HP is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank please refer to the e-catalog on www.kennametal.com.

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Looking for a product that's not shown in this catalog?
Check the Kennametal website!

Online product catalog available 24/7

Visit <http://www.kennametal.com/holemaking/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

YPC Beyond™ with Through Coolant for Iron Materials

Primary Application

The all new B25_YPC Series Solid Carbide Drills are specifically engineered to deliver best-in-class hole quality and longest tool life in cast iron, ductile iron, CGI, and ADI. Operate these drills with standard through coolant or MQL.

The B25_YPC Beyond Solid Carbide Drill combines unique Kennametal technologies, such as the Y-TECH™ flute spacing, the HP-point geometry, the KCK10™ Beyond grade, and the latest, proprietary post-coat treatment technology into one tool.

Features and Benefits

Y-TECH Technology with Uneven Flute-to-Flute Angle

- Unbalanced forces by design avoid chipping on margin lands.

Three-Margin Lands

- Reduce pendulum motion by directing forces towards third margin for superior hole accuracy (cylindricity, constant diameter, hole straightness).

New HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.
- Highest possible feed rates.

Corner Chamfer

- Avoids breakout when drilling through holes in gray iron.
- Significantly increases tool life at elevated speeds and feeds.

KCK10 Beyond Grade

- The grade contains multiple layers of PVD coating offering outstanding wear resistance for the drilling of cast irons.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant or MQL is applied.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Using Kennametal Slim Line hydraulic chucks together with standard B25_YPC is recommended if workpiece contours need to be bypassed.

F-Shank

- For standard line items with F-shank, please refer to the e-catalog on www.kennametal.com.

SE 4-Margin Drills with Through Coolant for Steel

Primary Application

B256 Series Solid Carbide Drills are the high-performance platform for mid-L/D applications in steel that require high accuracy and consistent hole straightness combined with excellent metal removal rates and long tool life.

Features and Benefits

SE Drill-Point Design

- Sculptured edge enables high feed rates.

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes.

KC7315™ Grade

- Multilayer, TiAlN-based coating with high hot hardness allows 30% higher cutting speeds and constant tool life.
- Optimized tool surface finish ensures chip evacuation when drilling deeper holes.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- For follow-up operations, such as machining screw holes in connecting rods, the point angle of the step drill for the screw head should be adjusted.

Check the Kennametal website!

Online product catalog available 24/7

Visit <http://www.kennametal.com/holemaking/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

HP Beyond™ 4-Margin Long-Length Drills with Through Coolant

Primary Application

B269_HP Series Solid Carbide Drills are 12 x D, long-length drills, closing the gap between 8 x D drill (B256_SE) and 15 x D (B271_HP). They are designed for deep-hole applications without pilot drill in steel, cast iron, and stainless steel materials. Operate these drills with standard through coolant or MQL. The drills have a standard A-shank according to DIN 6535 HA (round cylindrical with 2mm steps).

Features and Benefits

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes or inclined exits.

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.
- Eliminates the need for pilot drilling.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KCPK15™ Beyond Grade

- The grade is a multilayer, TiAlN-based coating with high hot hardness. It enables highest cutting speeds and enables the use in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.

Customization

- Intermediate diameters available as engineered solutions.
- Length variations and step drills available as engineered solutions.

HP Solid Carbide Deep-Hole Drills for Steel, Cast Iron, and Non-Ferrous Materials

Primary Application

B27_HPG Series Solid Carbide Drills are the optimum platform for drilling holes up to 30 x D in steel, cast iron, and stainless steel materials. Drill deep holes up to 4x faster than conventional HSS and gun drills. Application of MQL is possible.

The B27_HPS in the new uncoated KN25™ grade now offers the same advantages for drilling in non-ferrous materials such as aluminum, copper, and brass. These series are now available from 2,3–16mm (.09–.63") diameter and in lengths from 15–30 x D.

Features and Benefits

HP Drill-Point Design

- Low thrust.
- Excellent centering capabilities.
- Highest possible feed rates.

Four-Margin Lands

- Improves hole straightness.
- Improves hole alignment when drilling through cross holes.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KC7425™ Grade (B27_HPG)

- A multilayer, AlCrN-TiSiN PVD coating provides outstanding wear resistance.
- New ultra-fine-grain carbide ensures process reliability at high feed rates.

KN25 Grade (B27_HPS)

- The uncoated grade helps to prevent built-up edge when drilling aluminum and high-temp alloys.
- The highly polished surfaces of both grades ensure superior chip evacuation, even when low-pressure coolant or MQL is applied.

Customization

- Intermediate diameters available as semi-standards.
- Length variations — including even longer versions — available as engineered solutions.

The B27_ deep-hole drill series offers an increase of up to 100% in metal removal rates (MRR) compared to competitive gun and HSS drills. It also enables up to 20-30% increased MRR compared to competitive solid carbide products. This MRR increase means bottom-line savings to customers in throughput, machine time, and personnel hours.

Increased Drill Head
Reduces contact with hole wall.

135° HP Point Geometry
Excellent centering ability.

Four-Margin Design
Stability increases tool life.

To achieve the best tool performance, we recommend using the deep-hole drill with a hydraulic chuck.

Reduction sleeves are available to hold the drill shank with the hydraulic chuck.

Unique New Polished Surface
Reduction of friction in the chip flute and on the lands. Shorter drilling time through omission of reversing cycles.

Ultra-Fine-Grain Substrate
Reduces risk of fracture.

Advanced PVD Coating
Extends tool life. Superior chip evacuation.

30° Helix
Increases productivity by removing peck cycle.

Special Core Taper
Enables more chips through the flute, increasing feed rates.

1) Pilot/Pre-Drill Hole

- Drill: B976A... KC7315™ or another drill with a 140° point angle.
- Depth of pilot: minimum 2 x D.
- Drill \varnothing = nominal \varnothing up to nominal +0,010mm (+.0004").
- Apply catalog recommended speeds and feeds.

Recommendations:

- Use only a conical (B976A) or split-point drill to pilot (do not use an SE-HP drill).
- Use a hydraulic chuck to achieve minimum tool runout.
- Be sure the machine tool and setup are rigid.
- Check the pilot drill for wear. Excessive wear can lead to premature wear on the B27_ cutting edge and possibly catastrophic failure.

2) Feed B27_ into Pilot Hole:

- Drill: B27_
- 1,000 RPM and recommended feed rate, no rapid traverse.
- Depth: 0,25–0,30mm (.010–.012") above the bottom of pilot hole.

Recommendations:

The coolant channels of the B27_ are smaller than typical Kennametal drills. Be sure that a steady supply of coolant is delivered through the coolant channels to the cutting edges. If coolant supply is not steady or is unequal through both channels, check:

1. Coolant filtering system.
2. Sealing of adapter/spindle.
3. Chips blocking the coolant hole on the drill shank.

NOTE: Reduce cutting speed to minimize imbalances in machine spindle/adapter. On MQL applications, make sure that the coolant is directly supplied from the chuck into the back end of the drill shank.

3) Drill Hole:

Cutting Parameters: start recommended speed and feed rate at 0,25–0,30mm (.010–.012") from the bottom of the pilot hole.

Recommendations:

DO NOT PECK OR DWELL up to 30 x D!

With long-chipping steel materials, it may be necessary to increase feed rate by 10–20% to provide optimal chip control. For long-chipping aluminum materials, it may be necessary to decrease feed rate and increase speed.

Reduce feed rate on angled exits and crossholes by 50–60%.

NOTE: Feed recommendations are usually higher than with conventional solid carbide drills.

4) Drill Retraction:

Cutting Parameters: 50 RPM and feed rate 2 m/min (40mm/rev or 1.6 IPR).

NOTE: Reduce cutting speed to minimize imbalances in machine spindle/adapter.

HP Drills with Through Coolant for High-Temperature Alloys

Primary Application

B/K28_ Series Solid Carbide Drills offer a material-specific design and grade for machining high-temperature-resistant alloys such as titanium alloys and nickel-based alloys in aerospace applications. This drill minimizes subsurface deformation.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.

Straight Cutting Edge

- Optimized chip formation with less stress and heat generation.
- Rigid wedge at the cutting corner to withstand high thermal and mechanical stress.

Unique Flute Design

- Drastically improved chip evacuation.

K715™ Grade

- Specified, uncoated 9% cobalt fine-grain carbide.
- The uncoated grade helps to prevent built-up edge in drilling aluminum and high-temp alloys.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Y-TECH™ Drills with Through Coolant for Difficult-to-Machine Materials

Primary Application

The B29_YPL Series Solid Carbide Drills are specifically engineered to drill stainless steel, high-temp alloys, and difficult-to-machine materials.

Y-TECH drills deliver best-in-class hole quality and longest tool life in these difficult-to-machine workpiece materials. Operate these drills with standard through coolant or MQL.

Features and Benefits

YPL Drill-Point Design

- Ensures good centering and chip formation.
- No jamming of chips and enables easy reconditioning.

Uneven Flute-to-Flute Angle

- Unbalanced forces by design eliminate chipping on margin lands.

Three-Margin Lands

- Reduce pendulum motion by directing forces towards third margin, which results in superior hole accuracy (cylindricity, constant diameter, hole straightness).

KC7315™ Grade

- A multilayer, TiAlN-based coating with high hot hardness enables higher cutting speeds and outstanding wear resistance.
- Optimized surface finish of the tool ensures chip evacuation in high-speed drilling and MQL applications.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Using Kennametal Slim Line Hydraulic Chucks together with standard B29_YPL is recommended if workpiece contours need to be bypassed.

Solid Carbide Drills

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.

For more information, please visit www.kennametal.com/carbiderecycling.

TX Drills with Through Coolant for Close Tolerance Holes

Primary Application

B/K411 Solid Carbide Drills have an X-shaped, free-cutting 130° point design and are designed for gray cast iron, nodular iron, and non-ferrous and aluminum alloy materials. Best suited for high-quality, close tolerance holes that require a very good surface finish.

Features and Benefits

Two Cutting Edges with Straight Flutes

- Precise shape of the hole even if used as platform for complex step drills.
- Can run into cored holes.

X-Shaped Drill Point

- Excellent centering capabilities.

Four-Margin Land Design

- Second set of cutting margin lands improves the surface quality.
- Achieve tight diameter tolerances.
- Can run through cross holes and exit on inclined surfaces.

Wear-Resistant Carbide KF1™ Grade

- Long tool life in abrasive materials, such as cast iron and aluminum die cast alloys.
- The uncoated grade KF1 helps to prevent built-up edge in drilling aluminum.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.
- Coated KC7205™ grade delivers high wear resistance with very high diameter accuracy.

TX Drill Applications

The excellent stability of the TX drill enables it to be used for drilling through inclined planes, intersecting holes, and cored holes:

SPF Drills for Composite (CFRP) Materials

Primary Application

B/K53_ Series Solid Carbide Drills offer a material-specific design and grade to machine carbon fiber-reinforced polymer (CFRP) composite materials by minimizing delamination and increasing tool life.

Features and Benefits

SPF Drill-Point Design

- Special 90° point angle increases centering capability.
- Low thrust and improved hole quality.

Unique Geometry

- Combination of point design, substrate, and coating provides longer tool life and requires substantially less cutting force.

KDF400™ Grade

- CVD multilayer diamond coating provides more wear resistance and reduced friction, increasing tool life and improving chip flow.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

For information on L, L3, and L4 max, see the Solid Carbide foldout table.

Online product catalog available 24/7

Visit <http://www.kennametal.com/holemaking/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

FB Drills with Through Coolant for Flat-Bottom Applications

Primary Application

B707_FB Series Solid Carbide Drills are productivity tools that combine two operations in one:

- 1) Eliminate the 180° end mill in flat-bottom drilling or when preparing an inclined or curved surface for drilling.
- 2) After full cylindrical engagement, the drill runs at normal solid carbide drilling parameters.

The B707_FBS Series with the new uncoated KN15™ grade now offers the same advantages for drilling in non-ferrous materials, such as aluminum, copper, and brass. The B707_FBL Series is designed for applications in stainless steel and high-temperature alloys.

Features and Benefits

Unique FB Drill-Point Design

- Two effective cutting edges over center enable high feed rates.
- Creates a true flat-bottom hole from O.D. to center.
- Four-margin land design improves hole straightness and roundness and provides good alignment, even when drilling cross holes.

Straight Cutting Edge

- Guarantees a true 180° hole ground.
- Rake angle correction improves chip control.

KC7315™ Grade on B707_FBG and _FBL

- Enables high drill-like penetration rates and superior tool life.

KN15 Grade on B707_FBS

- The uncoated grade prevents built-up edge reducing the risk of fracture.
- The highly polished surfaces ensure superior chip evacuation even when low-pressure coolant or MQL is applied.

Customization

- Intermediate diameters available as semi-standards.
- Length variations available as semi-standard:
 - B706_ 1.5 x D
 - B708_ 5 x D
 - B709_ 8 x D
- Other length variations and step drills are available as engineered solutions.

The B707_FBG drill eliminates the traditional two-step process to create a flat-bottom hole using a drill and an end mill and can perform the operation 25–40% faster. It also eliminates the two-step process of using an end mill to pre-machine a flat on the workpiece material for inclined surfaces.

Workpiece Application

B707A..FBG Standard Length

B708/B709A...FBG Custom Long Length

<ul style="list-style-type: none"> Tapped hole with lead chamfer larger than FBG diameter. 	<p>No feed reduction.</p>	<p>50% feed reduction.</p>
<ul style="list-style-type: none"> Nominal diameter pilot required. 	<p>Rough or hardened surfaces. No feed reduction.</p>	<p>Pilot on all surfaces. No feed reduction.</p>
<ul style="list-style-type: none"> >6° angled entrances. 	<p>Reduce feed by 30% until full diameter, or use pilot.</p>	<p>Pilot with short FBG on all surfaces. No feed reduction.</p>

<ul style="list-style-type: none"> Round surfaces. 	<p>Reduce feed by 30% until full diameter, or use pilot.</p>	<p>Pilot with short FBG on all surfaces. No feed reduction.</p>

HP Beyond™ Step Drills with Through Coolant for Steel and Iron

Primary Application

Most tapped holes require a chamfer. The B731_HP and B732_HP Step Drills offer a one-pass solution in steels and irons in traditional tap sizes to reduce cycle time and increase productivity. An extensive range of step drills are available to cover Kennametal's taps products.

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.

Unique Flute Design

- Drastically improved chip evacuation.
- Better hole surface quality.

KCPK15™ Beyond Grade

- The grade is a multilayer, TiAlN-based coating with high hot hardness. High cutting speeds enable usage in MQL applications.
- The highly polished surface ensures superior chip evacuation even when low-pressure coolant is applied.
- Improves average metal removal rate and tool life by 10–20%.

Customization

- Intermediate diameters available as semi-standards.
- Using Kennametal Slim Line Hydraulic Chucks together is recommended if workpiece contours need bypassed.

Kenna Universal™ Drills

Primary Application

Kenna Universal Drills (B96_B97_Series) are engineered to deliver superior performance in steel, cast iron, and stainless steel applications making it ideal for small- and medium-sized shops. The universal application profile reduces tool change times and the number of drills in inventory. Covering a large spectrum of off-the-shelf diameters and a broad range of applications makes Kenna Universal Drills an excellent alternative to other high-performance products.

The new B976Z series is available from 2,383–3mm (.0938-.1181") making it the first standard offering in less than 3mm. This extended diameter offering covers all common tap drill sizes, including an expanded selection of wire, fractional, and letter sizes.

Use as Pilot Drill

- Ideal point angle and tolerance make the Kenna Universal Drill the preferred pilot drill for B27_Series Solid Carbide Deep-Hole Drills.

Features and Benefits

Kenna Universal Drill-Point Design

- Low thrust. Works well on a variety of machines.
- Excellent centering capabilities.
- Easy to regrind.

Four-Margin Land Design

- Improves hole straightness and roundness.
- Provides good alignment and stability in tough drilling applications — even when drilling through cross holes.

KC7315™ Grade

- A multilayer, TiAlN-based coating with high hot hardness enables 30% higher cutting speeds and constant tool life.
- Surface finish ensures chip evacuation when drilling deep holes.

Customization

- Intermediate diameters available as semi-standards.
- Length variations and step drills available as engineered solutions.

F-Shank

- For standard line items with F-shank, please refer to the e-catalog on www.kennametal.com.

** Alternative chamfering solutions are available in combination with SEFAS™ or BF; see page I1.
Please use this table for orientation purposes only. Detailed information on available products (inserts, toolholders, etc.) can be found on the indicated pages of this catalog.

KenTIP™ Modular Drill System

Primary Application

The KenTIP Modular Drill System offers performance levels commonly achieved with solid carbide drills. The patented locking system enables inserts to be changed inside the machine tool. Use KenTIP in steel, cast iron, ductile iron, and stainless steel applications.

KenTIP Modular Drills are available up to diameter 1.1020" (27,99mm). With the new diameter extensions of KSEM PLUS™ down to 28mm, we offer modular drilling solutions with a front clamping mechanism from diameter 8–70mm. The user can change the drilling inserts in the machine without taking the body off, saving setup time and manufacturing costs.

Introducing the all new KenTIP inserts made of KCP15™ grade especially developed to provide longer tool life for steel applications.

Features and Benefits

Improved Interface

- Stronger pocket seats on all inserts and bodies.
- Longer tip and body life in unstable conditions, especially side loads.
- All new tips and bodies are interchangeable with previous versions.

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.
- **NEW** HPC(M) for cast iron applications.
- **NEW** HPL(M) for stainless steel applications.

Easy Insert Change

- Locking method requires no screws or clamps.
- Insert blades can be changed with a simple provided tool and does not require drill body removal from the machine or holder.

Disposable

- No reconditioning costs.
- Consistent performance.
- Eliminates number of tools waiting for reconditioning, providing significant cost savings.

Tailored Grades and Geometries

- KCP15 grade has a new PVD coating enabling longer tool life in all steel applications.
- KC7320™ grade AlTiN-based PVD coating for the demands of drilling stainless steels.
- KC7410™ grade contains multiple layers of PVD coating offering outstanding wear resistance for the drilling of cast irons. The geometry prevents breakout when drilling through holes.
 - KTIP_HPC inserts are designed for gray cast and low-strength ductile irons (K1).
 - KTIP_HPCL_ inserts are ideal for low- and medium-strength CGI and ductile irons and high-strength ductile and austempered ductile Iron (K2, K3).

Drill Body Portfolio

- Standard 3, 5, and 8 x D tool bodies with round and flanged shank available, inch and metric.
- **NEW!** Standard 1.5 x D bodies available, especially for piloting operations.
- For the latest product list, please refer to the e-catalog at www.kennametal.com.

Customization

- Intermediate diameters available as semi-standards.
- Close tolerance tips available for precision holes.
- Chamfering insert pockets available.
- Multiple steps possible.

■ KenTIP Chamfering Insert

- Drilling and chamfering in one operation.
- No height adjustment required.
- Low setup time.
- Use standard inserts.
- Tool bodies available as custom solutions.

- first choice
- alternate choice

Mounting the KenTIP Inserts

1) Fix drill holder on arbor. For insert exchange, fix arbor on the machine or set on tool presetter.

2) Remove dust using air blast.

3) Put insert into drill holder (use gloves to protect your hands).

4) Turn lightly in a clockwise direction (use gloves to protect your hands).

5) Set the wrench properly.

6) Make sure the wrench fits with the insert slot (check size and alignment of wrench and insert slots to avoid injury).

Slot for wrench

7) Slowly turn the wrench in a clockwise direction.

8) Complete.

Cooling the KenTIP Drill

External cooling

Only when using the 3 x D tool bodies

Note

KSEM™ Modular Drill System

Primary Application

The KSEM Modular Drill System offers extended length and drilling diameters beyond the KenTIP™ Modular Drill System. Hole depths of 10 x D up to 1.575" (40mm) drilling diameter are standard. Various grades are available for your most demanding applications. The KSEM Modular Drill System covers a diameter range from .4921–1.5748" (12,5–40mm).

Features and Benefits

HP Drill-Point Design

- Low thrust prevents workpiece flexing.
- Excellent centering capabilities.
- HP(M) and HPG(M) for all steel applications.
- **NEW** HPC(M) for cast iron applications.
- **NEW** HPL(M) for stainless steel.

Easy Insert Change

- Robust pocket design requires only a simple wrench for blade removal.
- Selection of grades/geometries available.

Strength of Design

- Accelerated feed rates offer increased productivity.
- Four-wall pocket provides insert stability.
- All geometries except HPL(M) can be reconditioned by Kennametal for added economy.
- Through coolant standard for improved tool life, hole finish, and chip removal.

Tailored Grades and Geometries

- KC7315™ grade is a TiAlN-based PVD grade offering superior performance in all steel applications.
- KC7320™ grade has an AlTiN-based PVD coating developed for the demands of drilling stainless steels.
- KC7410™ grade contains multiple layers of PVD coating offering superior wear resistance when drilling cast irons. The geometry prevents breakout when drilling through holes.
 - KTIP_HPC inserts are designed for gray cast and low-strength ductile irons (K1).
 - KTIP_HPCCL_ inserts are ideal for low- and medium-strength CGI and ductile irons and high-strength ductile and austempered ductile iron (K2, K3).
 - For KSEM_HPCCL_ line items, please refer to the e-catalog at www.kennametal.com.

Customization

- Intermediate diameters available as semi-standards.
- Chamfering insert pockets available.
- Multiple steps possible.

Modular Drills

- Use designated insert blade with each drill body.
- For alternatives, see insert blade fitment chart on page H44.
- Drill shipped with central lock screw and wrench.
- Order insert blade separately; see pages H42–H43.

For information on L, L3, and L4 max, see the Modular Drill foldout table.

- Use designated insert blade with each drill body.
- For alternatives, see insert blade fitment chart on page H44.
- Drill shipped with central lock screw, wrench, and side pipe plug.
- Order insert blade separately; see pages H42–H43.

Modular Drills

For information on L, L3, and L4 max, see the Modular Drill foldout table.

KSEM Chamfering Solutions

- Drilling and chamfering in one operation.
- No height adjustment required.
- Low setup time.
- Use standard inserts.
- Tool bodies available as standard.

- Use any KSEM insert blade diameter within the designated seat size.
- Drill shipped with central lock screw, insert screw, and wrenches.
- Order insert blades separately; see pages H42–H43.
- Order TPGX chamfering insert separately; see page H36.

- The NEW chamfering rings for KSEM are available in a diameter range of 12,5–32mm.
- The KSEM SEF ring is double-edged, features a more rigid design to withstand high feed rates, and reduces time-consuming deburring and small chamfer operations.
- Reduce machining time — combine drilling and chamfering in one operation.
- Short-term availability — standard tooling off-the-shelf — KSEM body and inserts, SEF ring, and SEFAS™ inserts.
- Flexibility — adjustable drilling depth.
- For speed and feed recommendations, please refer to catalog recommendations based on geometry and tool body length of the carrying KSEM tool.

- Small chamfers up to 1mm do not need further feed reduction.
- At deeper chamfers, a feed rate reduction of 50% is highly recommended to avoid vibrations and movement of the ring during operation.
- For inserts, please refer to SEFAS System on page I26, insert 3.42807R021.

NOTE: Order inserts separately; see the SEFAS system, page I26, insert 3.42807R021.

Centering using PCM inserts

HPM inserts of the follower drill

Precentering with FAS centering tool

Why is precentering necessary?

- Generally speaking, for drilling depths 5x the nominal diameter and above (5 x D).
- In unstable conditions (workpiece and tool clamping).

Why precenter using PCM inserts?

- Soft-cut entry of follower drill due to 150° point angle of the PCM insert.
- No extension of the follower drill in the entry area.
- No breaks at the cutting edges.

What happens if...

...a center cannot be used for technical reasons?

- Spot drill with normal insert at normal and reduced cutting data (approximately 1/2 vc and approximately 1/2 vf), then continue drilling with regular cutting data without lifting off/stopping.

...there is no suitable PCM cutting insert in the standard range (ϕ)?

- Manufacture to order using PCM geometry and k7 tolerance.
or
- Center using the same cutter insert as for the follower drill but without the cutting edges penetrating the workpiece (spot drill ϕ approximately 90% of drill ϕ D1).

...only one tool body is required?

- Enter the workpiece with 50% feed until the cutting edges and the heels have penetrated the hole, then continue drilling without lifting off/stopping using regular cutting data.

Other problems

Short hole drilling with precentering support tool?

- Up to 1x nominal diameter (1 x D) possible.

Rotating Applications

KSEM inch drills with round shanks (no flats) are specifically designed for rotating applications where the drill rotates and the workpiece remains stationary. The shank to drill-point location of these drills is held to an extremely close tolerance. To maintain accuracy, and get maximum performance from the KSEM drill, use only the approved toolholding method shown below.

Inch Drill Bodies with Flange

KSEM inch drills with a flange can be used in rotating applications where the drill rotates and the workpiece remains stationary. To maintain accuracy and get maximum performance from the drill, use only the approved toolholding method shown here.

Metric Drill Bodies with a 2° Whistle Notch™

KSEM metric drills come equipped with 2° Whistle Notch shanks. The 20mm, 25mm, and 32mm diameter shanks use WN adapters. The 50mm shank uses a WD adapter. Choose the correct adapter to minimize runout and securely hold the drill.

Modular Drills

Mounting the Inserts

Inserts (<32mm) without Connector Pin

- 1) Use the screwdriver to set the threaded pin:
 - for inserts up to Ø 32mm, flush with the drill face.
 - for inserts bigger Ø 32mm, set 2mm below the drill face.
- 2) Tighten the insert using the screwdriver to fit securely in the insert seat.

To change the insert, turn the clamping screw counter-clockwise until the insert is released.

Repair of Damaged Threaded Pin

In the event that the central threaded pin becomes damaged, it can be removed after severing it in the tool body. To do this, drill beneath the insert seat in the tool body. The insert and threaded pin can then be removed. For information regarding the position and diameter of this repair hole, please refer to the manual (sheet 290.001 D/GB) supplied with the tool body.

NOTE: For inserts without a connector pin, avoid jamming during mounting through precise positioning.

Insert blades may be used, within limits, on different drill bodies. The insert blade must be of the same seat size. Overhang (see Figure 1) must be kept under .0098" (0,250mm) per side. For best drilling performance, rigidity, and efficient chip evacuation, always use the first-choice steel body. Performance may be compromised by using alternatives. In some applications, chips may bind between the drill body and the hole wall — especially when machining long-chipping materials like austenitic stainless steel and low-carbon steel.

(does not apply to stub length drills)

Modular Drills

Drive Power (kW)

Feed Force (kN)

Torque (Nm)

NOTE: The diagrams above are used to determine the drive power, feed force, and torque. They are based on cutting force measurement in tempered steels in Cgr. 6. Tensile strength: Rm = 600 N/mm². The base cutting speed used is: vc = 80 m/min.

The following coolant pressure is recommended:

relative drilling depth	coolant pressure
1-3 x D	8 bars
5 x D	12 bars
7 x D	20 bars
10 x D	30 bars

insert seat size	diameter range D (mm)	L min (mm)	L new (mm)
C	12,50-13,50	8,5	9,6
B	13,51-14,50	8,9	10,1
A	14,51-15,88	9,4	10,6
1	15,88-18,00	10,3	11,6
2	18,01-19,99	11,2	12,6
3	20,00-22,00	12,1	13,6
4	22,01-24,00	13,0	14,6
5	24,01-26,00	13,9	15,6
6	26,01-28,00	14,8	16,6
7	28,01-30,00	15,7	17,6
8	30,01-32,00	16,6	18,6
9	32,01-36,00	18,4	20,6
10	36,01-40,00	20,2	22,6

WIND ENERGY TAPS

The new high-performance, large-sized HSS-E-PM taps called Wind Taps were developed for the manufacturers of some of the most important wind turbine components like hubs, rings, and gearbox housings to increase productivity and keep up with the rapid increase in demand for such components.

- Designed for both conventional non-rigid and CNC-synchronous tapping machines.
- Manufactured to DIN 376 dimension.
- Extra-long version developed to reach longer overhang that is very common on these big components.
- Precision h6 shanks enable use in either conventional tap holders with square drive or in precision round toolholders.

KSEM PLUS™ Modular Drill System

The KSEM PLUS drill concept is simple but effective. It combines the benefits of the KSEM modular drill (high feeds and length-to-diameter [L/D] ratios) with the benefits of an indexable drill (high speeds and low consumable costs).

Primary Application

The KSEM PLUS modular drill in steel, cast iron, and stainless steel materials replaces HSS or indexable drilling tool solutions in the diameter range of 1.102–2.756" (28–70mm) from 3–10 x D. For applications within the energy market (e.g., bearing rings for windmills), this tool delivers vast improvements in productivity and capacity.

Features and Benefits

Replaceable Head with Newly Developed FDS-Interface Coupling

- Quickly and easily replace inserts or drill heads without the need to remove the complete tool body from the machine.
- Save money and reduce tool stock by changing just the drill head and not the complete tool body if the front section wears out.
- Use one tool body for different sizes of drill heads.

Two Effective Cutting Edges

- Higher metal removal rates than indexable drills.
- Up to 100% increased productivity.
- L/D ratio capabilities from 3–10 x D.

KSEM PLUS Center Insert with HP

- Feed rate capabilities of modular drills.
- Longer life of KSEM PLUS inserts and no chip flow obstruction.
- No precentering at L/D less than 8 x D.

DFT™/DFR™ Outboard Inserts

- Higher speeds than modular drills.
- More stable cutting conditions.
- Improved surface finish and hole diameter accuracy.

Tailored Grades and Geometries

- KC7315™ grade is a TiAlN-based PVD grade, offering superior performance in all steel applications.
- KC7410™ grade contains multiple layers of PVD coating, offering outstanding wear-resistance when drilling cast irons.
- KC7140™ grade is a TiCN-based PVD grade, offering excellent toughness in unstable conditions and is the first choice in stainless steel.

Customization

- Heads are available in intermediate diameters and up to Ø 76mm available as semi-standards.
- Tool bodies are available with different shank styles and up to 20x drill Ø as long as total length including shank <920mm.
- Heads for reground inserts are available as semi-standards.
- Tool bodies are available with different shank styles.
- B1 style heads with DFC outboard inserts are available for machining stacked plates, cross hole applications, and situations with inclined exits.

- To ensure 100% system stability, KSEM™ inserts used for KSEM PLUS should not be reground.
- KSEM PLUS heads are shipped with all insert screws.
- KSEM PLUS heads are shipped with two wrenches: one for the KSEM insert and one to be used for the DFT™/DFR™ inserts as well as for the assembly of the body to the head.

- Order KSEM PLUS shanks using connection coupling size (CSMS) to determine which heads go with each shank.
- PDD in the callout drawing refers to the D1 of the HPGM and HPCM inserts for use with KSEM PLUS.
- Order inserts (KSEM, DFT, and DFR) for KSEM PLUS separately.

■ KSEM PLUS Heads 28–70mm

Modular Drills

- To ensure 100% system stability, KSEM™ inserts used for KSEM PLUS should not be reground.
- The callout D1 (mm) = PDD. PDD is used in reference to the KSEM PLUS heads.

KSEM PLUS™ Application Cautions and Hints

Half cylindrical holes

Cored holes

Hole expansion on the center axis

Coolant Recommendations

Internal coolant is recommended for optimum chip flow and tool life.

KSEM PLUS Application Cautions and Piloting

Application		L/D < 6 x D	L/D < 8 x D	L/D > 8 x D
	Regular Entrance Exit	Piloting Not Required	Reduce Feed by 50%	KSEM™ Pilot Drill
	Angled Entrance < 3°	KSEM Pilot Drill	KSEM Pilot Drill	KSEM Pilot Drill
	Angled and Concave Entrance > 3°	Face Mill and KSEM Pilot Drill	Face Mill and KSEM Pilot Drill	Face Mill and KSEM Pilot Drill
	Angled Exit	Regular Entrance Exit	Reduce Feed by 75%	Not Recommended
	Stacked Material	Stacked material requires a custom solution head using S2S inserts.		

The KSEM PLUS Piloting Insert SHOULD NOT be Reground:

Only new KSEM PLUS inserts will provide consistency and process security of the KSEM PLUS modular drill system.

NOTE: Reground KSEM PLUS inserts can be used in KSEM drills.

Piloting Instructions:

1. KSEM....PCM
Pilot drill Ø equal KSEMP Ø PDD
2. Drill 1mm deep from full diameter

New KSEM PLUS B1 Head

Discover *New Dimensions* with

KSEM PLUS™ Extensions

KSEM PLUS is the industry benchmark when drilling large diameter applications. With significantly reduced cost per hole, KSEM PLUS now extends its range.

Diameter Extension:

- New generation of large heads featuring diameters above 70mm and up to 127mm in 10 x D*.

Application Extension:

- New KSEM PLUS B1 heads for difficult applications using new DFC inserts and guiding pads.
- Drilling through inclined exits up to 15°.
- Perfect guidance of head when drilling through cross holes with widths up to 50% of drill diameter.
- Works great in stacked materials.
- Standard range of KSEM PLUS B1 heads available from 28–70mm*.

“This is not drilling, this is more like punching! Surfaces and accuracy are fully compliant with our requirements. We have been waiting a long time for such a drill!”
Customer, Germany

Combination Tools

Combination Tools

Combination Drilling Tools are customizable using standard components and combine centering, drilling, and countersinking into a single operation, increasing productivity by reducing cycle time and tool changes.

Both the BF and SEFAS™ combination systems provide high flexibility to adapt the tool to varying hole geometries and provide full through-coolant capabilities.

BF Combination Drilling System

- Drilling, chamfering, and countersinking in one tool.
- Uses solid carbide and modular KenTIP™ drills.
- Covered drill diameter range .125–.750" (3,4–18mm).
- A specific range of drill diameters can be applied for each drill body based upon drill shank size.
- Highly flexible system:
 - Chamfer insert with different angles.
 - Insert design enables for special geometrical shapes.
 - Inserts can be easily interchanged.

SEFAS™ Combination Drilling System

- High-performance, self-centering drill and chamfer in one tool.
- Drill diameter range .156–.750" (4–18mm).
- Uses standard solid carbide drills in HP and TX styles as well as modular KenTIP drills.
- 90° and 82° angles available for chamfer inserts.
- Various shanks can be used with metric and inch diameter drills.

NOTE: TF drills may be used with one insert in limited applications.
Consult your Kennametal Sales Representative for more information.

BF Combination Drilling System

Primary Application

Combines centering, drilling, and countersinking into a single operation, increasing productivity by reducing cycle time and number of tool changes. The modular design provides flexibility to adapt the tool to varying hole geometries in small- and medium-lot-size manufacturing.

With its slim design and full-through-coolant capabilities, the BF combination system can be used even for deeper holes, critical materials, and with restricted workspace.

Features and Benefits

Productivity

- Reduce the number of tool changes and your cycle time by combining drilling and countersinking into one operation.
- Use high-performance solid carbide drills and KenTIP™ drill bodies to achieve high speeds and feeds.
- Avoid the need for reconditioning by using KenTIP blades.

Versatility

- Choose between solid carbide drills and KenTIP drill bodies.
- Various grades and insert styles.
- Benefit from the modular system when adjusting the drill length or insert style to manufacture different geometries.

Customization

- Length variations available as engineered solutions.
- TX drills for aluminum are available as engineered solutions.
- BF inserts can be customized to almost any required geometry.

NOTE: When using BF bodies with KTIP, please refer to the recommended cutting data for KTIP tools on pages H10–H11.
 Please be aware that the values mentioned are only guidelines.
 It is highly recommended to adjust cutting data according to your specific application in order to achieve best drilling results.

SEFAS™ Combination Drilling System

Primary Application

Combines centering, drilling, and chamfering into a single operation, increasing productivity by reducing cycle time and number of tool changes.

These productivity gains can be achieved by still using standard solid carbide or KenTIP™ drills. The system provides full through coolant capabilities.

Features and Benefits

Productivity

- Reduce the number of tool changes and your cycle time by combining drilling and countersinking into one operation.
- Achieve highest metal removal rates by applying a HP-style drill.
- Reduce your inventory and avoid reconditioning by using KenTIP blades.
- Easily change tool within the machine by applying KenTIP.

Versatility

- Any style of standard HP drill can be used, achieving highest metal removal rates.
- Use TX drills to achieve excellent hole quality and tool life in non-ferrous materials.
- For increased accuracy and tool life, use the Kennametal hydraulic chuck recommended for cylindrical tool shanks.
- Benefit from various insert styles for use in most workpiece materials.

Customization

- Length variations available as engineered solutions.

The SEFAS combination drilling system may be used in most workpiece materials. The design and flexibility of the system can be used with a wide variety of solid carbide drills.

Three types of SEFAS chamfering tools are offered: (1) integral bodies with a compact design that provides additional workpiece and work-holding clearance; (2) chamfering rings that may be mounted to Kennametal hydraulic chucks for optimal drill performance and increased productivity; and (3) high-performance HSK bodies for new machine spindles and high-output applications.

- Drill body shipped with all screws, clamps, and wrenches.
- Order the inserts and drills separately.
- Two chamfer inserts required per body.

Indexable Drills

Drill Fix™ DFR™, DFS™, and DFT™

Primary Application

Drill short holes up to 5 x D with DFR, DFS, and DFT indexable drills in steel, cast iron, ductile iron, stainless steel, and non-ferrous materials. The Drill Fix portfolio covers the diameter range .500–3.250" (12,5–82mm).

Apply where speed and economy are prime considerations.

Features and Benefits

Drill Fix DFR

- Diameter range of 12,5–24mm in 2 x D, 3 x D, and 4 x D.
- Rectangular-shaped inserts offer the highest stability and feed rates at smaller sizes.
- Long body tool life due to soft starting cut, short chips, and low cutting forces.
- X-offset design to adjust diameter size on turning machines and optimize tolerances on machining centers.

Drill Fix DFS

- Combines the benefits of a trigon-style DFT inboard insert and a square-style SP..X outboard insert.
- Standard diameter range from 1.000–2.500" (24–55mm) in 2 x D, 3 x D, 4 x D, and new 5 x D.
- Drill Fix DFT insert has inner insert for best centering capabilities.
- Squared-outboard insert offering four economic cutting edges.
- Highest feed rates and cutting speeds applicable due to highly stable tool body design.
- X-offset design to adjust diameter size on turning machines and optimize tolerances on machining centers.
- Beyond™ grades to achieve highest productivity, achieving outstanding results in steel, stainless steel, and cast iron.

Drill Fix™ DFT™

- One drill system that covers a large diameter range, from 1.000–3.250" (24–82mm) in 2.5 x D and 4 x D.
- Best centering capabilities due to trigon-shaped inserts used as inboard and outboard insert.
- Various insert grades and geometries available.
- Balanced cutting forces in the shank center for highest tool body stability.
- X-offset design to adjust diameter size on turning machines and optimize tolerances on machining centers.

Stationary Applications

Metric Drill Bodies with 2° Whistle Notch™

Metric shank drills with a 2° Whistle Notch shank are easily mounted into inch turrets using a WD adaptor. Align the X-axis of the drill with the X-axis of the machine tool as described above. Accurate alignment is absolutely essential for good performance. The drill must be on center within the tolerance shown above. Angularity must not exceed 0,07mm (.003").

Inch Bodies • Flange

Drill Fix™ inch drills, with a flange, were designed for use on lathes or any machine where the tool remains stationary and the workpiece rotates. An "x" is marked on the flat of the X-axis of the drill to aid insert orientation on the machine tool. It is important to align the X-axis of the drill with the X-axis on the machine tool. Accurate alignment is absolutely essential for good performance. The drill must be on center, within the tolerance shown here. Angularity must not exceed 0,07mm (.003") within the designated drill depth.

Drill Fix X-Adjustment

Applications Examples

Stationary Tool

The X-adjustment must be made at the outer cutting edge, parallel to the surface of the outer insert when the turret of the turning machine is offset along the X-axis.

Rotating Tool • Straight Shank

Use an adjustable eccentric chuck with a steep taper to help offset the drill along the X-axis when machining with a rotating tool on a machining center.

X-Adjustment Description

Different diameter holes can be drilled using the same Drill Fix drill. Holes with a diameter greater than the nominal diameter can be drilled directly into a solid. Intermediate dimensions are produced by means of the X-adjustment.

Benefits

- Eliminates the need for special tools for intermediate dimensions.
- Just a few drills cover a wide application range.
- Once precise adjustment of the desired diameter is made, tolerances of 0,05mm (± .002") are achieved.

Additional information on X-adjustment, as well as additional information to Drill Fix tools, is available on the Kennametal website, www.kennametal.com.

Drill Fix™ DFR™

Drill Fix DFR offers maximum feed rates at diameter range 12,5–24mm at 2 x D, 3 x D, and 4 x D applications. Using rectangular-shaped inboard and outboard inserts enables soft starting cuts and short chips as well as enabling higher feed rates than small-size symmetrical-trigon or square inserts. Drill Fix DFR's low cutting forces provide long tool body life and highest stability at smallest sizes.

Furthermore, these inserts enable soft starting cuts and short chips. The low cutting forces of a Drill Fix DFR provide long tool body life and highest stability at smallest sizes.

Features and Benefits

Productivity and Profitability

- Achieve highest feed rates with rectangular-shaped inserts that offer a soft starting cut and highest stability.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centers, to reach tolerance optimization.
- Same insert size is used in each pocket, reducing inventory costs.

Versatility

- Diameter range covering .500–1.000" (12,5–24mm).
- 2 x D, 3 x D, and 4 x D L/D ratios as standard.
- Various shanks as standard available: WD, SSF, and new KM-TS™.
- Multiple insert grades and geometries available.
- Use where feed rates are the limiting factor.
- Apply at straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Eccentric chuck available as standard.

Reliability

- Highest stability at smaller sizes due to rectangular-shaped insert.
- Same insert can be used as inboard or outboard insert. No risk of mixing up inner and outer insert.
- Low cutting forces resulting in long body tool life.

Customization

- Intermediate diameters available as semi-standards.
- Engineered solutions available.
- Multistep drills available upon request.
- Left-hand version available.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Drill Fix™ DFS™

Drill Fix DFS combines the economical squared outboard insert with the superior centering capabilities of the trigon inboard insert. The DFS indexable drills offer increased metal removal rates combined with high surface quality and hole straightness.

Available in a diameter range of 24–48mm (1–2.5"), the Drill Fix DFS provides the highest cutting data capabilities, even under difficult conditions, offering long tool body life and excellent chip evacuation. DFS indexable drills are now available as standard up to 5 x D supplementing the portfolio of 2 x D, 3 x D, and 4 x D.

Boost your productivity even further and achieve outstanding results in steel, stainless steel, and cast iron with the new Beyond™ DFS outboard inserts in KCPK10™, KCU25™, and KCU40™.

Features and Benefits

Higher Productivity and Profitability

- Achieve highest metal removal rates and excellent chip evacuation due to advanced chip flutes and non-central and increased cooling channels.
- Make use of squared outboard inserts that offer four economic cutting edges where needed.
- Benefit from a complete product portfolio offering standard L/D ratios up to 5 x D.

Versatility

- Drill holes up to 5 x D in steel, cast iron, ductile iron, stainless steel, and non-ferrous materials.
- Use where speed and economy are prime considerations.
- Apply DFS drills to straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centers to reach tolerance optimization.
- Eccentric chuck available as standard.

Reliability

- Benefit from high accuracy holes independently from feed rates applied.
- Gain outstanding results by applying the Beyond DFS inserts.
- High wear resistance at interrupted cuts due to squared outboard insert.

Customization

- Intermediate diameters, multistep drills, and other non-standard shanks are available.
- Smaller and larger diameters available.

- Drill shipped with insert screws and Torx wrench.
- See pages J100–J103 for inserts.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Drill Fix™ DFT™

Drill Fix DFT is available in the diameter range .625–3.250" (24–82mm) as a versatile and reliable tool solution with a large portfolio of lengths, insert geometries, and grades.

Balanced cutting forces, improved chip flute, and coolant-channel design enable high metal removal rates and long tool body life. The trigon-shaped DFT inserts are used for both inboard and outboard inserts and offer the highest centering capabilities and three cutting edges each.

Features and Benefits

Productivity and Profitability

- Achieve high hole accuracy with trigon-shaped inboard inserts that offer the highest centering capabilities.
- Use X-offset on turning machines to adjust the drill diameter, eliminating the need for specials in many applications and on machining centers to reach tolerance optimization.
- Same insert size is used in each pocket reducing inventory costs.

Versatility

Use Drill Fix DFT as most versatile and reliable indexable drilling tool:

- Diameter range covering .625–3.250" (24–82mm).
- 2.5 x D and 4 x D L/D ratios are standard.
- Various shanks available as standard: WD, SSF, and new KM-TS™.
- Trigon-shaped inserts offer three cutting edges.
- Large variety of DFT insert grades and geometries available.
- Apply DFT drills to straight holes, inclined entries and exits, interrupted cuts, and rough or welded entry surfaces.
- Eccentric chuck available as standard.

Reliability

- Highest centering capabilities due to trigon-shaped insert.
- Same insert can be used as inboard or outboard insert — no risk of mixing up inner and outer inserts.
- Benefit from improved chip flute and coolant-channel design resulting in long tool body life and excellent chip evacuation.

Customization

- Intermediate diameters available as semi-standards.
- Engineered solutions available.
- Multistep drills available upon request.
- Stacked material version.

To learn more, [scan here](#).

For instructions on how to scan, please see page xxix.

- Drill shipped with insert screws and Torx wrench.
- See pages J96–J99 for inserts.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

Condition: S = Stable cutting conditions; U = Unstable cutting conditions; I = Interrupted cutting conditions
 Pocket seat: I = Inboard insert; O = Outboard insert

HTS Series Indexable Deep-Hole Drilling System

Primary Application

HTS series indexable drills are designed for deep-hole drilling up to 10 x D in steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. The three HTS systems — HTS-C, HTS, HTS-R — cover a diameter range of .787–10.629" (20–270mm).

Features and Benefits

HTS-C Indexable Drill System

- Diameter range .750–1.750" (20–45mm) in 5 x D and 8 x D ratios.
- Used with pilot drills for best centering possibilities.
- Trigon-shaped inboard insert with three cutting edges, available in various geometries and grades.
- Up to four economic cutting edges with the squared-outboard insert.
- Variable flute helix provides excellent chip evacuation.
- Customized body design available.

HTS Indexable Drill System

- Large diameter range from 1.750–10.629" (45–270mm) with standard drill heads.
- Drill Fix™ DFT™ trigon inserts as outboard and inboard insert offer the best centering capabilities as well as square-outboard insert cartridges for increased surface and hole quality.
- Various insert geometries and grades available as standard.
- Adjust drilling depth and diameter range with suitable extensions and reducers.
- Diameter adjustment by shortening outer cartridge.
- Customized drilling heads up to 21.259" (540mm).

HTS-R Indexable Drill System

- Modular system that uses drill heads equipped with DFR™ insert cartridges.
- Five drill heads cover the diameter range 1.575–2.165" (40–55mm).
- Drill Fix™ DFR rectangular inboard and outboard inserts offer the highest feed rates at small diameters.
- Various insert geometries and grades available as standard.
- Adjustable drilling depth and diameters by using extensions and reducers.
- Diameter adjustment by shortening outer cartridge.

HTS-C Indexable Drill System

HTS-C indexable drills are designed for drilling 5 x D and 8 x D in steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. The HTS-C covers a diameter range from 20–45mm (.750–1.750").

When using reduced feeds and cutting speeds, HTS-C can easily be applied on older or low-power machines.

Features and Benefits

Productivity

- Achieve high stability and hole straightness due to the pilot drill that offers the best centering capabilities.
- Benefit from flute helix design that provides excellent chip evacuation resulting in long tool body life.
- Suitable for older or low-power machines due to reduced feed and cutting speed capabilities.

Versatility

- Diameter range of 20–45mm (.750–1.750").
- 5 x D and 8 x D L/D ratio as standard.
- Inserts and pilot drills can be applied in various diameters and L/D ratios.
- Carbide and HSS pilot drills available for optimized productivity.

Customization

- Intermediate diameters available.
- Engineered solutions L/D up to 15 x D available.
- Carbide guidepads available.

- Drills shipped with insert, clamping, and adjusting screws and Torx wrench.
- Order pilot drills separately; see page J57.
- Order inserts separately; see pages J98–J103.

WARNING
 During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

WARNING

During through-hole operations, a slug or disc is produced as the tool breaks through the workpiece. When the drill is stationary and the workpiece is rotating, this slug may be hurled from the chuck by centrifugal force. Provide adequate shielding to protect bystanders.

HTS Indexable Drill System

The HTS indexable drill system is one of the most reliable deep-hole drilling systems available. Drilling up to 10 x D can be easily achieved in materials like steel, stainless steel, ductile iron, cast iron, and non-ferrous materials. Various drilling heads cover the diameter range 1.77–10.63" (45–270mm).

HTS drill heads are equipped with pilot drills and cartridges using trigon-shaped Drill Fix™ DFT™ inserts. Use HTS extensions and reducers to achieve various diameters and depths of drilling.

For improved surface qualities and increased reliability, finishing HTS cartridges with a squared-outboard insert are available as standard.

Features and Benefits

Productivity

- Achieve high hole accuracy by using pilot drills and trigon-shaped inserts.
- Benefit from improved surface qualities using finishing cartridges with squared-outboard inserts.
- Adjust outer cartridge to produce the desired cutting diameter, reducing inventory.
- Same insert size is used in each insert cartridge, reducing inventory costs.

Versatility

- Diameter range covering 1.77–10.63" (45–270mm).
- L/D ratio up to 10 x D as standard.
- Inserts and pilot drills can be applied in various heads and cartridges, covering various diameters.
- Large variety of DFT insert grades and geometries available.
- Finishing cartridge with squared-outboard insert offering four cutting edges for high process stability.
- Carbide pilot drills are available upon request.

Customization

- Wear pads can be added for increased stability.
- Fully engineered solutions available.
- Custom solutions covering diameter range up to 21.259" (540mm) are possible.

HTS-R Indexable Drill System

The HTS-R extends the HTS system by covering diameters between 1.575–2.165" (40–55mm).

Up to 30% higher feed rates achievable with rectangular-shaped Drill Fix™ DFR™ inserts with the added benefit of improved chip control.

Features and Benefits

Productivity

- Benefit from better chip control and higher insert stability for longer tool body life.
- Same insert size is used in each insert cartridge.

Versatility

- Diameter range covering 1.575–2.165" (40–55mm) with five drilling heads.
- Large variety of DFR insert grades and geometries available.
- Outer cartridges can be adjusted to produce the desired cutting diameter.
- Extensions and reducers are available as standard.
- Solid carbide and HSS pilot drills are available to match the cutting conditions to your specific applications.

Customization

- Wear pads can be added for increased stability.
- Fully engineered solutions available.

Pilot drill should be installed and set to the proper length before installing the inner cartridge.

Install inner cartridge, then the outer insert.

Install inner insert into cartridge.

To assemble your HTS(-R) head, choose the desired drill diameter range from the left-hand column. Next, follow the columns to the right, and select the appropriate component from each column to complete your HTS(-R) head.

HTS tool assembly combinations

- Select your appropriate drill diameter range.
- Choose the appropriate adaptor and shank size.
- Follow the columns to the right, and select the appropriate components from each column to complete your HTS(-R) tool.

- Change drill diameter by shortening the outer cartridge.
- Shorten at 90° to the contact face A and the support face B.
- Shortening reduces the effective drill diameter by 2x the amount removed.

Holemaking

Online product catalog available 24/7

Visit <http://www.kennametal.com/holemaking/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

- Head shipped with clamping and adjusting screws.
- Order pilot drill separately; see page J84.
- Order cartridges separately; see pages J82–J83.
