- Change drill diameter by shortening the outer cartridge.
- Shorten at 90° to the contact face A and the support face B.
- Shortening reduces the effective drill diameter by two times the amount removed.

8–10mm sizes are without coolant.

NOTE: Adapter includes all items shown except the nipple. Nipple must be ordered separately.
If replacement becomes necessary, the nipple is manufactured with a predetermined breaking point for safety purposes.
Maximum RPM is 1500. Maximum pressure is 72 psi or 5 bar.

Drilling of Rotor Blades

Drill Fix DFT and DFR with PCD Inserts

- Improved cycle times by piloting and drilling on a single operation.
- PCD-tipped carbide inserts for long tool life.
- High speed cutting.
- In-stock system with standard tooling.

These remarkably long components range from 40–200' (13–60m). In addition to material handling constraints, rotor blades require five to six hours of machining time with changeover requirements up to two hours.

wear resistance ← → toughness

Grade	Coating	Grade Description	Material																		
			05	10	15	20	25	30	35	40	45										
KCPK10		<p>Composition: With an advanced CVD TiCN-Al₂O₃ coating combined with a cobalt-enriched carbide substrate, this grade offers a balanced combination of deformation resistance and edge toughness.</p> <p>Application: The KCPK10 grade offers outstanding abrasion and crater wear resistance for high-speed machining of steels and cast irons. Use for very high cutting speeds with low to medium feed rates.</p>	P																		
	Al ₂ O ₃ TiCN																				
KCU25		<p>Composition: This advanced CVD TiCN-Al₂O₃ coating together with a newly engineered tough carbide substrate, adequate deformation resistance along with excellent edge strength is ensured and offers very good wear resistance over a wide range of machining conditions.</p> <p>Application: KCU25, as a high productivity grade with high speeds and feeds, is the first choice for productive process with very good reliability in steels, stainless steels, and cast irons.</p>	P																		
	Al ₂ O ₃ TiCN																				
KCU40		<p>Composition: With a multilayered PVD TiN-TiAlN coating and a tough substrate, this grade withstands interruptions and provides high wear resistance for long tool life.</p> <p>Application: The KCU40 grade is the first choice for high reliability in most materials. This grade should be used at medium speeds and high feeds due to sharper edges and as a grade for high toughness applications. It covers steel, stainless steel, cast iron, and high-temp alloys under certain conditions.</p>	P																		
	PVD TiN_TiAlN

CTR™ Counterboring Tools

CTR Counterboring Tools are designed for high-production screw-head counterbores and similar counterboring operations. Tools can be adapted to almost all applications resulting in optimum cutting performance and long tool life.

Extremely unequal insert positioning and flutes prevent chattering and generates less noise. A precise 90° bottom can be achieved with the S2 S inserts.

Features and Benefits

Productivity and Reliability

- S2 S inserts reduce additional drill operations to achieve a precise 90° bottom.
- Chatter-free operations for improved surface quality due to extremely unequal insert positioning and flutes.
- Yield high metal removal rates to reduce machine time and manufacturing costs.

Versatility

- Counterboring tools can be applied for steel, stainless steel, non-ferrous materials, cast irons, and heat-resistant alloy applications.
- Toolholders are double- or triple-fluted at a diameter range starting at 15–46mm (.591–1.811") offering through-coolant capabilities.
- S2 S standard inserts are double edged and available in various grades and geometries.

Customization

- Length and diameter variations with and without adjustable cartridges available.
- Combination and multistep tooling based on drilling tools, like Drill Fix™, with short distance and small diameter steps.
- Various radii and customized grades available upon request.

- Counterboring tool shipped with insert screws and Torx wrench.
- Order inserts separately; see pages J106–J107.

Hole Finishing with Kennametal

Owning the entire process chain from raw materials all the way to reconditioning means Kennametal is almost the only source in the metalworking industry where you can get all types of Hole Finishing tooling, from reaming and fine boring to motion tooling, directly from one hand. Kennametal is capable of offering you customized solutions for your application that are the best fit for your machining challenge without any limitations, in regard to portfolio or capacity.

PCD Tooling

- Extremely productive and tailored for satisfying your high-volume production needs.
- Several standard PCD grades, like KD1415™ and KD1425™, are available to provide the highest tool life and cutting data as well as unmatched surface and diameter tolerance quality.
- Platforms are available depending on your application and preference from steel to carbide based, adjustable pocket seats, fine-boring components like Romicon™ or FB cartridges, spindle couplings, or SIF™ steerable adapters.

Multiflute Reaming

- RMS™, RMB™, and RHM™.
- Highly productive and easy to apply.
- Large, standard, off-the-shelf portfolio of solid carbide, cermet, carbide-tipped, and modular reaming tools, all ground to achieve H7 without any customization.
- Complex Specials with multiple steps, coupling, and length variations are available.
- Intermediate sizes, grades, and lead chamfers available with short delivery.

Padded Reaming

- RIQ™ Quattro Cut™ and RIR™.
- Highest precision and surface quality achievable but still easy to apply.
- RIQ is the market-leading reaming technology, enabling you to leave out any back taper adjustment, dramatically reducing setup time and effort while still offering highest accuracy and surface quality and four cutting edges with PCD, CBN, carbide, or cermet.
- RIR provides you the most stable pocket seat and fail-safe clamping, from smallest to largest diameters.
- Combine the large, standard RIQ and RIR insert offering with your customized tool body.

Fine Boring

- Romicon™ and ModBORE™.
- Extremely flexible, covering a very large diameter and length range.
- Offers the latest grade technology by using standard turning inserts.
- Romicon enables diameter modifications directly at the machine by hand without setup equipment or accuracy affecting lock screws.
- ModBORE offers a very large diameter range with each type of tool along with roughing to finishing tooling and can be easily and safely adapted to every KM™ spindle.

Motion Tooling

- Sophisticated tooling achieves most challenging tasks.
- Large, customized Complex Solution portfolio of:
 - Linear feed out heads.
 - Eccentric actuating heads.
 - Pivot heads.
 - Cylinder boring tools.
 - Line boring bars.
 - Bottle boring tools.
 - Valve seat and guide tools.
 - Machining center tools.
- Depending on your application and preference, tools are based on the positive-stop-principle; use drawbars, like with engineered solution machines, or don't require machining center modifications at all.

Hole Finishing

Ra Surface roughness

NOTE: Surface roughness values are guidelines and depend on the application, coolant situation, machine, and cutting data applied.

Cylinder Head

Hole Finishing

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE PARENT BORE

CHALLENGE

- Valve seat and guide parent bore machining combined.
- Tolerance range 8 µm.
- Cast iron.
- Machining center with internal coolant.

SOLUTION

- RIQ padded reamer with integrated hydraulic chuck.
- RIQ Full face CBN KB1630™ insert.
- RMS™ reamer for guide parent bore.

CUTTING DATA

- vc 425 m/min f 0,10 mm/rev valve seat.
- vc 130 m/min f 0,60 mm/rev valve guide.

RESULT

- Four usable cutting edges per CBN insert.
- CBN RIQ insert with 28,000 bore tool life.
- 1,400 bores with regrindable RMS reamer.

BENEFIT

- Cost savings due to four edged full face CBN insert.
- No insert back taper adjustment needed.
- Same RPM at both stages saving time of spindle acceleration and deceleration.

Cylinder Head

Polished flutes
for improved
chip evacuation

Hole Finishing

PCD SEAT & GUIDE PARENT BORE PCDRSC04RLE

CHALLENGE

- Valve seat and guide parent bore machining combined.
- Tolerance range H7.
- Aluminum.
- Machining center with internal coolant.

SOLUTION

- PCD tipped, steel based tool (valve seat) with shrink in PCD tip, carbide based reamer (valve guide) with less than 4 µm total run out.

CUTTING DATA

- vc 344 m/min f 0,60 mm/rev valve seat.
- vc 985 m/min f 0,60 mm/rev valve guide.

RESULT

- Tool life of 456,000 bores.

BENEFIT

- Productivity increases as same RPM applied to both seat and guide stages.
- Lowest possible run out resulting in higher tool life.

Cylinder Head

RIQ serration defines valve seat angle

Hole Finishing

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Machining center with internal coolant.

CHALLENGE

- RIQ Valve Seat tooling with integrated hydraulic chuck.
- RIQ K68™ carbide inserts and solid carbide RMS™ multiflute reamer.

SOLUTION

- vc 80 m/min f 0,10 mm/rev valve seat.
- vc 80 m/min f 0,32 mm/rev valve guide.

CUTTING DATA

- Tool life of 12,000 valve seats per insert.

RESULT

- Twelve usable cutting edges per carbide insert.
- Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.
- Able to adapt RIR™ padded reamer machining the valve guide.

BENEFIT

Cylinder Head

RIQ serration defines valve seat angle

Hole Finishing

RIQ™ QUATTRO CUT™ VALVE SEAT & GUIDE MACHINING

CHALLENGE

- Valve guide machining combined with primary and secondary seat angles.
- Sinter metal.
- Concentricity of seat to guide less than 50 µm.
- Transfer line with internal coolant.

SOLUTION

- RIQ Valve Seat tooling with carbide bushing for Valve Guide reaming tools.
- RIQ KB1630™ insert with TiN wear indicator.
- RIR™ padded reamer machining.

CUTTING DATA

- vc 80 m/min f 0,07 mm/rev valve seat.
- vc 60 m/min f 0,14 mm/rev valve guide.

RESULT

- Tool life of 18,000 valve seats per roughing insert.
- Tool life of 12,000 valve seats per roughing insert.

BENEFIT

- Twelve usable cutting edges per full face CBN insert.
- Due to high precision RIQ pocket seat there is less setup effort as no angular adjustment of the insert is needed.
- Able to adapt RMS™ solid carbide reamer machining the valve guide.

Cylinder Head

Hole Finishing

Semi finish stage after pilot hole

PCD insert with chipbreaker

RMS™ VALVE GUIDE MACHINING

- Valve guide bore \varnothing 6mm (.236").
- Tolerance range 12 μ m H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 μ m.

CHALLENGE

- RMS solid carbide reamer — engineered solution.
- Machining center — with semi finish stage for picking up pilot hole.
- Transfer line — without semi finish stage.

SOLUTION

- vc 30 m/min (98 SFM).
- f 0,42 mm/rev (.017 IPR).

CUTTING DATA

- Tool life of 3,000 bores.

RESULT

- No presetting is needed.
- Productivity increases due to four effective cutting edges compared to one with padded reamers.

BENEFIT

RIR™ VALVE GUIDE MACHINING

- Valve guide bore \varnothing 6mm (.236").
- Tolerance range 12 μ m H7.
- Brass material, lead free.
- Concentricity of seat to guide less than 50 μ m.

CHALLENGE

- RIR padded reamer with PCD guide pads.
- Single edged KD1415™ PCD insert with chip breaker.

SOLUTION

- vc 60 m/min (197 SFM).
- f 0,14 mm/rev (.006 IPR).

CUTTING DATA

- Tool life of 100 bores.
- Surface finish Rz 6.3 μ m.

RESULT

- Secure process due to very good chip control on lead free brass.

BENEFIT

Cylinder Head

Hole Finishing

MOTION TOOLING VALVE SEAT & GUIDE MACHINING

CHALLENGE

- Semi-finish and finish machining of primary seat angle and valve guide in one operation.
- Sinter metal.
- Transfer line with internal coolant.

SOLUTION

- Taper turning head with quill for reamer.

CUTTING DATA

- vc 271 m/min f 0,05 mm/rev valve seat.
- vc 60 m/min f 0,11 mm/rev valve guide.

RESULT

- Run out of guide to seat 7 μ m.
- Cylindricity of guide 12 μ m.

BENEFIT

- Higher accuracy of valve seat angles as machining result is independent from insert wear.
- Time saving combination with valve guide reamer.

Cylinder Head

Polished flutes in for improved chip evacuation

Chipformer in carbide body

Hole Finishing

PCD STEP REAMING PCDSC22RLE

- Valve lifter bore \varnothing 12mm (.472").
- Tolerance range 18 μ m G7.
- Aluminum AISI7Mg.
- Machining center with internal coolant.

CHALLENGE

- PCD tipped, carbide based reamer and counter sinker with internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

SOLUTION

- vc 400 m/min (1.312 SFM).
- f 0,10 mm/rev (.004 IPR).

CUTTING DATA

- Tool life of 125,000 holes.
- Surface finish better than Rz 1.5 μ m.

RESULT

- Secure process and very good concentricity.

BENEFIT

PCD STEP REAMING PCDSC02RLE

- Injector bore \varnothing 7,75–19,5mm (.305–.768").
- Tolerance range 5 μ m.
- Aluminum G-AISI7Mg.
- Machining center with internal coolant.

CHALLENGE

- PCD tipped, carbide based tool with PCD guide pads at \varnothing 19,5mm and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

SOLUTION

- vc 220 m/min (722 SFM).
- f 0,35 mm/rev (.014 IPR).

CUTTING DATA

- Tool life of 400,000 bores.
- Surface finish better than Rz 3 μ m.

RESULT

- Secure process due to chipformer in carbide body improving chip formation.

BENEFIT

Cylinder Head

RIQ pocket for indexing without adjustment

Hole Finishing

RIQ™ QUATTRO CUT™ /RIR™ PADDED REAMING

CHALLENGE

- Injector bore \varnothing 10,3–41 mm (.406–1.614").
- Tolerance range 18–25 μ m H7.
- Cast iron GG25.
- Quick-change interface between first and second machining stage.

SOLUTION

- First stage: RIR reamer with RIQ profile insert.
- Second stage: RIQ padded multi step reamer.
- Radial actuated KST interface as stages have different tool life due to different diameters.

CUTTING DATA

- v_c 23–90 m/min $n = 700$ RPM.
- f 0,32 mm/rev (.025 IPR).

RESULT

- Tool life of 1,000 components per insert edge.
- Surface finish better than Rz 16 μ m.

BENEFIT

- No back taper adjustment needed with RIQ inserts.
- Front and back end of tool can be handled independently.
- RIQ pocket seat allows insert indexing without adjustment reaching < 20 μ m axial run out.

Cylinder Head

Self aligning
padded reamer

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Oil seal bore finishing \varnothing 56,4mm (2.220").
- Tolerance range 30 μ m H7.
- Aluminum.
- Cambore to oil seal bore self alignment.
- Transfer line with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts floating on finish machined cam bore.
- Self-aligning reamer body to ensure cam bore to oil seal bore concentricity.

CUTTING DATA

- vc 326 m/min (1.070 SFM).
- f 0,32 mm/rev (.004 IPR).

RESULT

- Tool life of 80,000 cylinder heads.

BENEFIT

- No insert back taper adjustment needed.
- Cost savings due to four edged full face PCD RIQ insert.

Cylinder Head

Semi finish and finish stage combined

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Cambore finishing \varnothing 25mm (.984").
- Tolerance range 21 μ m H7.
- Aluminum.
- Deflection less than 20 μ m over total length.
- Machining center with internal coolant.

SOLUTION

- RIQ padded reamer with two PCD KD1415™ full-face inserts for semi-finishing and two PCD KD1415 full-face inserts for finishing.

CUTTING DATA

- vc 334 m/min (1.096 SFM).
- f 0,16 mm/rev (.006 IPR).

RESULT

- Tool life of 160,000 cylinder heads.
- Surface finish Ra 0.3 μ m.

BENEFIT

- No insert back taper adjustment is needed.
- Cost savings due to four edged full face PCD RIQ insert.
- Setup time reduction from 8 h with competitive tooling to less than 1/2 h with RIQ.

Cylinder Block

Individual and simultaneous CLB adjustment

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore \varnothing 78,45mm (3.089").
- Tolerance range 20 μ m.
- Cast iron GG26.
- Replace low productivity reaming process.
- Machining center HSK100 with internal coolant.

CHALLENGE

SOLUTION

- Multicron engineered solutions tool with three finishing cartridges with individual set up and automatic wear compensation with front CLB knob.
- CPGW060204S01015C KB1630.

CUTTING DATA

- vc 1.281 m/min (4.200 SFM).
- f 0,42 mm/rev (.017 IPR).

RESULT

- Tool life of 2,000 components per setup.
- Cylindricity 13 μ m.
- Surface finish Ra 2.4 μ m.

BENEFIT

- High productivity due to three cutting edges and automatic wear compensation inside of machine.
- Bore tolerance range of 20 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment executed by machine.

Cylinder Block

CLB screw for automatic wear compensation

MOTION TOOLING

CHALLENGE

- Cylinder bore \varnothing 75mm (2.953").
- Cast iron GG25.
- Semi-finish and finish operation combined in one tool with coolant pressure activated finish stage.
- Machining center with internal coolant.

SOLUTION

- Motion tool with feed out cartridges.
- Two channel coolant system with coolant supply for inserts and feed out cartridges.
- Solid CBN inserts with eight cutting edges KB1340™.

CUTTING DATA

- v_c 600 m/min f 0,05 mm/rev semi-finish.
- v_c 600 m/min f 0,11 mm/rev finish.

RESULT

- Tool life of 2,000 bores per tooling setup.
- Cylindricity better than 8 μ m.

BENEFIT

- Higher productivity as roughing at forward and finishing at backward movement — with coolant feed out.
- Finish diameter adjustable with CLB process.
- Improved cylindricity than two separate operations.

Cylinder Block

Bayonet quick change system

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore \varnothing 78,933mm (3.108").
- Cast iron GG25.
- Reduce setup and adjustment effort with roughing and finishing at various cylinder blocks.
- Engineered solutions vertical mill with internal coolant.

CHALLENGE

SOLUTION

- Romicon engineered solutions tool with quick-change interface and drawbar actuated finish cartridge.
- SNGN090308T00520 KY1615 roughing insert.
- CPMT09T308LF KT315™ finishing insert.

CUTTING DATA

- vc 580 m/min f 0,26 mm/rev roughing.
- vc 580 m/min f 0,19 mm/rev finishing.

RESULT

- Tool life of 100 components per setup.
- Cylindricity 13 μ m.
- Surface finish Ra 1.5 μ m.

BENEFIT

- Bore tolerance easily and consistently achieved due to 1 μ m per click in radius adjustment.
- Weight reduction from 11 kg to 1.8 kg.
- Setup time reduction from 1.5 h to 15 min.
- Secure process resulting in higher cpk value.

Cylinder Block

Hole Finishing

ROMICRON™ FINE BORING

CHALLENGE

- Piston bore \varnothing 68mm (2.677").
- Tolerance range 30 μ m.
- Cast iron.
- Machining center HSK100A with internal coolant.

SOLUTION

- Engineered solution SVS4B head.
- Two semi-finish and one finish cutting edge.
- TPGW110204S01015C KB1630™.

CUTTING DATA

- vc 595 m/min (1.952 SFM).
- f 0,15 mm/rev (.006 IPR).

RESULT

- Surface finish Ra 0.8 μ m.
- Roundness better than 8 μ m.

BENEFIT

- 80% less adjustment time needed.
- Bore tolerance range of 30 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Cylinder Block

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder bore \varnothing 96,9mm (3.815").
- Tolerance range 30 μ m.
- Cast iron.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- Romicon standard KR50SVS4B094M head with engineered solution steep taper adaptor with chamfering inserts.
- CPGW060208S01015C KB1630™.

CUTTING DATA

- vc 600 m/min (1,969 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 800 components.
- Surface finish Ra 3 μ m.

BENEFIT

- High productivity increase as a result of 2x cutting speed and 40% higher feed rate compared to previous solution.
- Bore tolerance range of 30 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Cylinder Block

Semi and finishing stages combined

Hole Finishing

ROMICRON™ FINE BORING

CHALLENGE

- Cylinder bore \varnothing 103,17mm (4.062").
- Tolerance range 50 μ m.
- Cast iron.
- Semi-finish and finish operation combined.
- Machining center HSK100A with internal coolant.

SOLUTION

- Romicon engineered solutions tool with two semi-finishing, one finishing and one chamfering cartridges.
- Automatic wear compensation with CLB.
- SCGW09T308S01015C KB1630™.

CUTTING DATA

- vc 1.000 m/min (3,281 SFM).
- f 0,25 mm/rev (.010 IPR).

RESULT

- Tool life of 450 components per cutting edge.
- Cylindricity less than 17 μ m.
- Surface finish Ra 2,4 μ m.

BENEFIT

- High productivity due to automatic wear compensation inside of machine.
- 1 μ m per click in radius adjustment.

Cylinder Block

Individual and simultaneous CLB adjustment

Hole Finishing

ROMICRON™ FINE BORING

- Cylinder liner Ø 127,94mm (5.037").
- Cast iron GGzCrMo250.
- Increase productivity, reduce amount of constant stock for following honing process.
- Custom vertical lathe with internal coolant.

CHALLENGE

SOLUTION

- Multicron engineered solution tool with five finishing cartridges with HSK80C adaptor for facing and boring through feed-out system included.
- CPGW060204S01015C KB1630™.

CUTTING DATA

- vc 1.200 m/min (3,937 SFM).
- f 0,50 mm/rev (.020 IPR).

RESULT

- Tool life of 4,000 components per setup.
- Cylindricity 8 µm.
- Surface finish Ra 2.0 µm.

BENEFIT

- High productivity due to five cutting edges.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Cylinder Block

1 μm per click
in radius adjustment

ROMICRON™ FINE BORING

CHALLENGE

- Crank bore finishing \varnothing 60mm (2.362").
- Tolerance range 30 μm .
- Cast iron GG25.
- Reduce setup and cycle time.
- Transfer line with internal coolant.

SOLUTION

- Line boring bar with Romicon standard cartridges KRMSVS00M055M.
- Semi-finishing and finishing operations in one.
- CPGT060204LF KC5010™.

CUTTING DATA

- vc 150 m/min f 0,2 mm/rev semi finish.
- vc 150 m/min f 0,12 mm/rev finish.

RESULT

- Tool life of 120 components.
- Surface finish better than Rz 16 μm .
- Roundness better than 5 μm .

BENEFIT

- Semi-finishing operation during forward movement and finishing operation during backward movement of the workpiece.
- Use of standard of the shelf Romicon tooling with engineered solution line boring bar.
- Time saving due to low presetting effort with 1 μm per click in radius adjustment.

Hole Finishing

Cylinder Block

Semi finish and finish stage combined

Hole Finishing

FINE BORING

- Crank bore finishing \varnothing 37mm (1.457").
- Tolerance range 5 μ m.
- Cast iron.
- Maintain tolerance for minimum of 50 bores.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- Line boring bar with tool bits adjusted by differential screw for more sensitivity.
- Dynamically balanced by design with axial holes ensuring highest stiffness of tool.

CUTTING DATA

- vc 160 m/min f 0,12 mm/rev semi-finish.
- vc 160 m/min f 0,08 mm/rev finish.

RESULT

- Customer proprietary information.

BENEFIT

- Use of standard C-style inserts in LF reduce tooling costs in KCK15.
- Reduction of cycle time.
- Easy and fine adjustments ensure a stable process.

Cylinder Block

RIQ chamfering, plunging and reaming insert

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Balancing shaft bore \varnothing 31–39mm.
- Cast iron.
- Reaming of three diameters, machining of three chamfers and one facing operation in one tool.
- Minimum quantity lubrication MQL.

SOLUTION

- RIQ padded reamer with one effective cutting edge combining chamfering, counter sinking and reaming stage in one tool, using two reaming RIQ and one special RIQ insert.

CUTTING DATA

- v_c 100 m/min (328 SFM).
- f 0,14 mm/rev (.006 IPR).

RESULT

- Tool life of 8,000 bores per insert.
- Surface finish Rz 10 μ m.

BENEFIT

- No insert back taper adjustment needed.
- Highest angular precision without any adjustment with RIQ at chamfering stage.

Cylinder Block

Hole Finishing

KST pre-loaded taper face contact interface

RIQ™ QUATTRO CUT™ PADDED REAMING

- Dowel pin bore Ø 15,341mm (.604").
- Tolerance range 50 µm.
- Cast iron GG26Cr.
- Machining center with internal coolant.

CHALLENGE

- RIQ padded reamer with HSK interface.
- Coated carbide KC6105™ RIQ inserts with four edges.

SOLUTION

- vc 70 m/min (328 SFM).
- f 0,13 mm/rev (.005 IPR).

CUTTING DATA

- Tool life of 96,000 bores per insert.

RESULT

- No insert back taper adjustment needed.

BENEFIT

RHM™ MODULAR REAMING

- Position bore Ø 20mm (.787").
- Tolerance range 21 µm N7.
- Cast iron GG26Cr.
- Replace padded double-edged reamer.
- Machining center with internal coolant.

CHALLENGE

- Special RHM head with six cutting edges.
- Engineered solution KC6105 TIN coated carbide grade.

SOLUTION

- vc 63 m/min (207 SFM).
- f 0,84 mm/rev (.033 IPR).

CUTTING DATA

- Tool life of 336m.

RESULT

- 8x higher productivity due to higher feed rate.
- Tool life increased by 240% when compared to previous solution.

BENEFIT

Conrod

ROMICRON™ FINE BORING

- Pin bore \varnothing 58,033mm (2.285").
- Brass.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining center with internal coolant.

CHALLENGE

- Romicon engineered solution tool with two Romicon mechanism in one tool body.
- KC5010™.

SOLUTION

- vc 450 m/min (1.476 SFM).
- f 0,10 mm/rev (.004 IPR).

CUTTING DATA

- Tool life of 350 pin bores per insert.
- Surface finish better than Ra 1.0 μ m.
- Cylindricity 5 μ m.

RESULT

- Combination tool increases productivity.
- Bore tolerance range of 26 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

BENEFIT

ROMICRON™ FINE BORING

- Crank bore \varnothing 93,777mm (3.692").
- Steel C70.
- Combine finishing of crank and pin bore into one tool to increase productivity.
- Machining center with internal coolant.

CHALLENGE

- Romicon engineered solution tool with two Romicon mechanism in one tool body.
- KT315™.

SOLUTION

- vc 400 m/min (1.312 SFM).
- f 0,10 mm/rev (.004 IPR).

CUTTING DATA

- Tool life of 260 crank bores per insert.
- Surface finish better than Ra 1.0 μ m.
- Cylindricity 5 μ m.

RESULT

- Combination tool increases productivity.
- Bore tolerance range of 26 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

BENEFIT

Hole Finishing

The Kennametal Solution

Kennametal Global Engineered Solutions. Coordinated global resources with world-class manufacturing, process development, and implementation capabilities.

No matter how small or large your project.

- Whether it's a single tailored tool or the development of a comprehensive manufacturing process, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Regardless of where you're located, Kennametal is everywhere you are.

- With Kennametal's team, you receive globally coordinated manufacturing, process development, implementation, and optimization support and key alliances with machine tool builders and other leading technology manufacturers that ensure a complete solution.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com.

Conrod

RIQ cermet insert with chip former geometry

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Pin bore \varnothing 19mm (.748").
- Tolerance range 33 μ m H8.
- Steel C70.
- Entry/exit inclined and chip control improvement.
- Transfer line with MQL internal coolant.

SOLUTION

- RIQ padded reamer with two axial staggered RIQ inserts in microfinishing setup.
- Coated cermet RIQ inserts with four edges and special chip former.

CUTTING DATA

- v_c 200 m/min (328 SFM).
- f 0,20 mm/rev (.006 IPR).

RESULT

- Tool life of more than 5,000 components per insert.
- Surface finish Rz 12–14 μ m.
- Cylindricity 5 μ m.

BENEFIT

- No insert back taper adjustment needed.
- High productivity increase due to higher feed rate when compared to previous fine boring tools.
- Very short chips improve chip evacuation.
- Secure process as surface requirement of Rz 8 μ m to Rz 16 μ m are achieved.

Hole Finishing

Conrod

Individual and simultaneous CLB adjustment

Hole Finishing

ROMICRON™ FINE BORING

- Crank bore \varnothing 91,24mm (3.592").
- Steel C70.
- Increase productivity with semi-finishing and finishing operations.
- Transfer line with internal coolant.

CHALLENGE

SOLUTION

- Multicron quick-change engineered-solution tool with three semi-finishing and three finishing cartridges.
- Drawbar CLB adjustment of finishing inserts.
- SCMT09T308LF KT315™.

CUTTING DATA

- v_c 230 m/min (820 SFM).
- f 0,36 mm/rev (.014 IPR).

RESULT

- Tool life of 2,320 conrods per insert.
- Surface finish R_a 1,0 μm .
- Cylindricity 2 μm .

BENEFIT

- High productivity due to three cutting edges.
- Quick-change coupling to enable individual cartridge setup at multicron finishing stage.
- Bore tolerance range of 22 μm easily and consistently achieved due to 1 μm per click in radius adjustment.

Conrod

Double feed out mechanism

Hole Finishing

ROMICRON™ MOTION TOOLING

CHALLENGE

- Crank bore \varnothing 98,82mm (3.891").
- Tolerance range 26 μ m.
- Steel C70.
- Drawbar actuated solution to semi-finish, finish, and chamfer both sides of the crank bore.

SOLUTION

- Motion tool based on Romicon with double feed out mechanism and fixed insert cartridges.
- SCMT09T308LF KC5010™.

CUTTING DATA

- v_c 230 m/min (755 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 600 conrods per insert.
- Surface finish Ra 1.0 μ m.
- Cylindricity 2 μ m.

BENEFIT

- Very stable and highly productive process as multiple operations are combined.
- Blue print solution for various types of conrods at customer site.

Conrod

Hole Finishing

ROMICRON™ FINE BORING

- Pin bore Ø 16,77mm (.660").
- Crank bore Ø 20,77mm (.818").
- Steel C70.
- Combines roughing, semi-finishing, and finishing operation into one tool.

CHALLENGE

SOLUTION

- Romicon standard head HSK63ASVUBB2116M with engineered-solution boring bar.
- CPMT060204LF KC5010™.

CUTTING DATA

- vc 120 m/min f 0,10 mm/rev roughing.
- vc 120 m/min f 0,05 mm/rev finishing.

RESULT

- Tool life of 2,500 components per insert edge.
- Surface finish Ra 0.5 µm.
- Cylindricity 3 µm.

BENEFIT

- Productivity increase due to combination tool.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Steering Column

Adjustable cartridge with PCD insert

Hole Finishing

PCD COUNTERSINKING PDCSTM03RLE

CHALLENGE

- Bore \varnothing 26,2; 37,6; and 44mm.
- Tolerance range 21 μ m N7.
- Aluminum G-ALSi9Cu3.
- Varying depth of cut ca. 1,5mm.
- Machining center with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with internal coolant.
- Three effective cutting teeth; KD1415™.
- Standard cartridge SCFCR08CA06 achieves required surface finish range.

CUTTING DATA

- v_c 500 m/min (1,640 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Surface finish Ra 1.6–2.3 μ m.

BENEFIT

- Secure process.

Steering Column

Hole Finishing

PCD COUNTERSINKING PDCSTA03RLE

- Bore \varnothing 17,07; 39,1; and 50,9mm.
- Tolerance range $21 \mu\text{m N7}$.
- Aluminum G- AlSi10Mg .
- Varying depth of cut ca. 2,5mm.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 600 m/min (1,969 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 2,000 meters.

BENEFIT

- Productivity increased due to higher cutting data.

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSCA04RLE

CHALLENGE

- Bearing bore \varnothing 13,5 and 18mm.
- Tolerance range 18 μ m H7.
- Aluminum G-ALSi10Mg.
- Varying depth of cut ca. 0,5mm.
- Machining center with internal coolant.

SOLUTION

- PCD tipped, carbide-based tool shrunk in SIF™ steerable interface with internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 230 m/min (755 SFM).
- f 0,25 mm/rev (.010 IPR).

RESULT

- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process.

Gear Housing

Adjustable PCD
pocket seat

Hole Finishing

PCD COUNTERSINKING PCDSTMJ04RLE

- Bearing bore \varnothing 40, 62, 85mm.
- Tolerance range 25 μ m S7.
- Aluminum AISi9Cu3.
- Machine three different diameters with one tool.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- v_c 630–1,340 m/min $n = 5,010$ RPM.
- f 0,32 mm/rev (.013 IPR).

RESULT

- Tool life of 500 workpieces.

BENEFIT

- Secure process with only 1.2 sec cutting time per operation.
- Higher productivity due to combining three operations into one tool.
- Very stable process without chip control issues.

Gear Housing

Highly uneven spacing

Hole Finishing

PCD STEP REAMING PCDRSTM06RLE

CHALLENGE

- Bearing bore \varnothing 130mm.
- Tolerance range 25 μ m S6.
- Aluminum AlSi8Cu3.
- Varying depth of cut ca. 0,5–5mm.
- Machining center with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with HSK interface and internal coolant.
- Six effective cutting and chamfering teeth in positive cutting position; KD1415™.

CUTTING DATA

- v_c 350 m/min (1,148 SFM).
- f 0,60 mm/rev (.024 IPR).

RESULT

- Tool life increase versus previous solution.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process.

Gear Housing

Hole Finishing

PCD REAMING PCDRSTA03RLE

- Bearing bore \varnothing 35mm (.984").
- Tolerance range 21 μ m H7.
- Aluminum G-ALSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 235 m/min (771 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 100,000 holes.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process despite high L/D ratio.
- Very good surface quality.

Gear Housing

PCD REAMING PCDRSC02RLE

CHALLENGE

- Index bore \varnothing 11,5mm (.435").
- Tolerance range 18 μ m H7.
- Aluminum G-AlSi10Mg.
- Varying depth of cut ca. 3mm.
- Machining center HSK63A with internal coolant.

SOLUTION

- PCD tipped, carbide based tool with shrink in HSK63A adapter with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 1,005 m/min (3,297 SFM).
- f 0,16 mm/rev (.024 IPR).

RESULT

- Tool life of 200,000 holes.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.
- Very short overhang length resulting in very good stability.

Gear Housing

Hole Finishing

PCD REAMING PCDRSTA04RLE

- Bearing bore \varnothing 80mm (3.150").
- Tolerance range 30 μ m H7.
- Aluminum G-AISI10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Four effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1,312 SFM).
- f 0,32 mm/rev (.013 IPR).

RESULT

- Tool life of more than 30,000 components.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.

Gear Housing

Hole Finishing

PCD MULTI-OPERATION TOOL PCDMSTA04RLE

CHALLENGE

- Bearing bore \varnothing 28 and 90mm.
- Tolerance range 21 and 35 μ m H7.
- Aluminum G-AlSi10Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with two individual adjustable SIF™ steerable interfaces and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1,312 SFM).
- f 0,32 mm/rev (.013 IPR).

RESULT

- Tool life of more than 95,000 holes.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSTM04RLE

- Bearing bore \varnothing 80 and 120mm.
- Tolerance range 30 and 35 μ m H7.
- Aluminum G-ALSi7Mg.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 800 m/min (2,625 SFM).
- f 0,32 mm/rev (.013 IPR).

RESULT

- Tool life of more than 400 min.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.
- Tool life increase versus previous solution.

Gear Housing

PCD COUNTERSINKING PDCSTA03RLE

CHALLENGE

- Bearing bore \varnothing 81,25 and 90,3mm.
- Tolerance range 30 and 35 μ m H7.
- Aluminum G-AISI7Mg.
- Pre drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- v_c 400 m/min (1,312 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 10,000 components.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.

Hole Finishing

Gear Housing

Hole Finishing

PCD STEP REAMING PCDRSTA03RLE

- Bearing bore \varnothing 17,984 and 66,037mm.
- Tolerance range 8 and 20 μ m.
- Aluminum GD-AISI7.
- Pre-drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Three effective cutting teeth.
- KD1415™.

CUTTING DATA

- vc 315 m/min f 0,24 mm/rev \varnothing 17,984 mm.
- vc 1.156 m/min f 0,15 mm/rev \varnothing 66,037 mm.

RESULT

- Tool life of 35,000 components.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and very good surface quality.
- Achieves high concentricity and straightness.

Gear Housing

PCD PROFILE MILLING PCDPSTM04E

- CHALLENGE**
- Retraining grooves \varnothing 60,4 and 90,7mm.
 - Tolerance range 60 μ m.
 - Aluminum G-AISI10Mg.
 - Pre drilled hole with 0,5mm depth of cut.
 - Machining center HSK63A with internal coolant.

- SOLUTION**
- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
 - Four effective cutting teeth.
 - KD1415™.

- CUTTING DATA**
- vc 1,500 m/min (4,921 SFM).
 - f 0,06 mm/rev (.002 IPR).

- RESULT**
- Tool life of 50,000 parts.
 - Surface finish better than Ra 0.4 μ m.

- BENEFIT**
- Secure process.
 - Combining two operations in one tool increases productivity.
 - High accuracy in the distance between the two machined grooves.

PCD PROFILE MILLING PCDPSTM04E

- CHALLENGE**
- Retraining grooves \varnothing 58, 58,6 and 60mm.
 - Tolerance range 25 μ m.
 - Aluminum G-AISI10Mg.
 - Pre drilled hole with 0,5mm depth of cut.
 - Machining center HSK63A with internal coolant.

- SOLUTION**
- PCD tipped, steel based tool with HSK63A interface and internal coolant.
 - Four effective cutting teeth.
 - KD1415™.

- CUTTING DATA**
- vc 1,500 m/min (4,921 SFM).
 - f 0,06 mm/rev (.002 IPR).

- RESULT**
- Tool life of 50,000 work pieces.
 - Surface finish better than Ra 0.2 μ m.

- BENEFIT**
- Combining machining operations increases productivity.
 - Excellent dimensional accuracy.

Differential Housing

Hole Finishing

ROMICRON™ FINE BORING

- Bearing bores \varnothing 60,22 and 88,85mm.
- Tolerance range 17 μ m.
- Ductile cast iron GGG50.
- Finishing, back boring, and chamfering in one tool.
- Machining center HSK100A with internal coolant.

CHALLENGE

SOLUTION

- Dynamically balanced Romicon engineered solution.
- Individual adjustment of fine boring and back boring stages.
- CPGT060204LF KC5010™.

CUTTING DATA

- v_c 200 m/min (656 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 240 components per insert.
- Surface finish Ra 1.6 μ m.

BENEFIT

- Bore tolerance range of 17 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Differential Housing

SPHX insert for precise 90° shoulder

Hole Finishing

PCD STEP REAMING

CHALLENGE

- Pin bore \varnothing 60mm (2.362").
- Tolerance range 19 μ m H6.
- Ductile cast iron GGG40.
- Finishing bore and 90° shoulder to \varnothing 55mm.
- Machining center with internal coolant.

SOLUTION

- Standard Romicon KM50SVS2B107M head with engineered solution cartridge.
- SPHX060204R21 KC7215™ standard double-edged countersinking insert.

CUTTING DATA

- vc 180 m/min (590 SFM).
- f 0,05 mm/rev (.002 IPR).

RESULTS

- Tool life of 4,000 components per insert.
- Surface finish Ra 1.6 μ m.

BENEFITS

- All requirements regarding perpendicularity achieved.
- Bore tolerance range of 19 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Differential Housing

Adjustable pocket seat

Hole Finishing

PCD STEP REAMING PCDRSTA04RLE

- Bore \varnothing 40 and 55mm (1.575 and 2.165").
- Tolerance range 30 μ m R7.
- Aluminum GD-AISI10Mg.
- Fine boring two diameters with one tool.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- PCD steel-based fine boring tool with four effective cutting edges, adjustable pocket seats at \varnothing 55mm, SIF™ steerable interface, and internal coolant.
- CCMT060202 KM™ one uncoated carbide.

CUTTING DATA

- v_c 340 and 520 m/min $n = 3,000$ RPM.
- f 0,60 mm/rev (.024 IPR).

RESULT

- Tool life of more than 15,000 components per insert.
- Surface finish Rz 10–12 μ m.
- Cylindricity better than 20 μ m.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 μ m and Rz 16 μ m continuously achieved.
- Higher productivity due to combining three operations in one tool.

Water Pump Housing

PCD COUNTERSINKING PDCSTA03RLE

CHALLENGE

- Bore positions of $\varnothing 21$ and 24mm (.827 and .945").
- Tolerance range 13 and 33 μm .
- Aluminum AlSi9Cu3.
- Pre drilled hole with 0,5mm depth of cut.
- Machining center HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth; KD1415™.

CUTTING DATA

- v_c 600 m/min (1,969 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 80000 components.
- Surface finish Rz 0.8 μm with $\varnothing 21\text{mm}$ and Rz 12 μm with $\varnothing 24\text{mm}$.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality between Rz 8 μm and Rz 15 μm at $\varnothing 24\text{mm}$ are continuously achieved.

Water Pump Housing

Hole Finishing

PCD MULTI-OPERATION TOOL PCDMSC02CCE

- Position bore \varnothing 7,9mm (.311").
- Tolerance range 22 μ m H8.
- Aluminum AlSi9Cu3.
- Combine drilling, back chamfering, and facing.
- Machining center BT40 with internal coolant.

CHALLENGE

- Solid carbide, PCD tipped, steel-based tool with back chamfering capability and internal coolant.
- Two effective cutting teeth.
- KD1415™.

SOLUTION

- vc 350 m/min (1,148 SFM).
- f 0,20 mm/rev (.008 IPR).

CUTTING DATA

- Tool life of 50000 components.
- Surface finish Rz 0.8 μ m.

RESULT

- Higher productivity due to combining three operations in one tool.

BENEFIT

Water Pump Housing

PCD STEP REAMING PCDRSTM04RLE

CHALLENGE

- Bearing bores \varnothing 10,14–18,45mm.
- Tolerance range 3–10 μ m.
- Aluminum GD-ALSi9Cu3.
- Pre-casted hole with 0,3mm depth of cut.
- Machining center HSK32A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with adjustable pocket seats, SIF™ steerable interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 89–162 m/min $n = 2800$ RPM.
- f 0,4 mm/rev (.015 IPR).

RESULT

- Tool life of 40,000 components.
- Surface finish Rz 0.8 μ m.

BENEFIT

- The quality criterion with an exact alignment of rightness, concentricity, and a high value of surface quality was reached.

Hole Finishing

Water Pump Housing

Hole Finishing

PCD END MILLING PCDESTM05E

- Face milling of connection face \varnothing 32mm.
- Aluminum AISi10Mg.
- Casted face with 2,5mm depth of cut.
- Machining center HSK63A with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based end mill with HSK63A interface and internal coolant.
- Five effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 1,005 m/min (3,294 SFM).
- f 0,06 mm/rev (.002 IPR).

RESULT

- Tool life of 3,000 min.
- Surface finish Ra 0.3 μ m.

BENEFIT

- Very low burr formation.

Planetary Gear Carrier

Chip control geometry

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Bearing bores \varnothing 8,8mm (.346").
- Tolerance range 9 μ m M6.
- Steel 42CrMo4 and 31CrMoV9.
- Increase tool life with long chipping material.
- Machining center with internal coolant.

SOLUTION

- RMS engineered-solution reamer with four effective cutting edges, internal coolant hole, and coolant channels at shank.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- v_c 70 m/min (230 SFM.).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 300 components.
- Surface finish R_z 1.0–2.0 μ m.

BENEFIT

- All requirements regarding perpendicularity, roundness, and surface quality below R_z 4 μ m are continuously achieved.

Planetary Gear Carrier

Hole Finishing

ROMICRON™ FINE BORING

- Bearing bores Ø 35 and 36,5mm.
- Tolerance range 20 µm.
- Steel 20MnCr5.
- Replace padded step reamer.
- Machining center with internal coolant.

CHALLENGE

- Romicon standard heads KR32SVS0B93M and HSK63ASVS0B117M.
- CCMT06020411 KT315™ cermet insert.

SOLUTION

- v_c 290 m/min (230 SFM).
- f 0,10 mm/rev (.012 IPR).

CUTTING DATA

- Surface finish better than Ra 1.0 µm.
- Cylindricity better than 5 µm.

RESULT

- More than 25% reduction in machining time.
- Removing setup of padded reamer outside of the machine results in increased up time.
- Bore tolerance range of 20 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

BENEFIT

Planetary Gear Carrier

Padded reaming
pin machining

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Bearing pin machining \varnothing 45mm (1.772").
- Tolerance range 16 μ m k6.
- Ductile cast iron GGG40.
- Surface quality of Rmax 10 μ m to achieve.
- Special dimensional accuracy requirement.

SOLUTION

- RIQ padded reamer with SIF™ steerable tooling interface and special gashing for external coolant supply.
- Balanced by design and fine balanced.

CUTTING DATA

- vc 105 m/min (344 SFM).
- f 0,06 mm/rev (.002 IPR).

RESULT

- Surface finish better than Rz 2.5 μ m.
- Roundness 3 μ m.
- Cylindricity 6 μ m.

BENEFIT

- No insert back taper adjustment needed.
- Faster setup and less scrap.

Brake Caliper

Hole Finishing

RMB™ MULTIFLUTE REAMING

- Main bore \varnothing 54mm (2.126").
- Tolerance range 50 μ m.
- Cast iron.
- Machining center BT50 with internal coolant.

CHALLENGE

SOLUTION

- UpSharp engineered-solution carbide tipped reamer with 12 cutting edges, clamped in standard Shrink Fit holder.
- TiCN coated carbide.

CUTTING DATA

- vc 90 m/min (295 SFM).
- f 1,21 mm/rev (.048 IPR).

RESULT

- Tool life of 1,500–2,000 components.
- Surface finish Ra 2–2.4 μ m.

BENEFIT

- Rigid design enables high feed rates increasing productivity.
- Reduces setup effort by using standard tooling with Shrink Fit adapter.
- Regrindable up to 5x.

Brake Caliper

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Pin hole Ø 12mm (.472").
- Tolerance range 30 µm.
- Cast iron.
- Machining center HSK63A with internal coolant.

SOLUTION

- UpSharp engineered-solution solid carbide reamer with six cutting edges.
- TiCN coated carbide.

CUTTING DATA

- v_c 75 m/min (246 SFM).
- f 0,8 mm/rev (.031 IPR).

RESULT

- Tool life of 5,000 holes.
- Surface finish Ra 1.0 µm.

BENEFIT

- Productivity increase.
- Longer tool life than competition.
- Ease of use due to shrink technology.

Brake Caliper

Hole Finishing

RIR™ PADDED REAMING

- Main bore \varnothing 60mm (2.362").
- Tolerance range 46 μ m H8.
- Cast iron.
- Obsolete honing process and produce undercut in the caliper bore.

CHALLENGE

SOLUTION

- RIR padded reamer with end cutting radius profile insert.
- Coated carbide RIR insert with two edges.
- KC6305™.

CUTTING DATA

- v_c 70 m/min (230 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 800 components per insert.
- Surface finish better than Ra 1.6 μ m.

BENEFIT

- Bore tolerance range of 46 μ m easily and consistently achieved.
- Cuts cost by eliminating honing and additional undercut operations.

Brake Caliper

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Main bore \varnothing 54,02mm (2.127").
- Tolerance range 40 μ m.
- Cast iron GGG.
- Reduce setup time and cost per part.

SOLUTION

- RIQ padded reamer with customer specific shank.
- Coated carbide RIQ insert with four edges.
- KC6305™.

CUTTING DATA

- v_c 80 m/min (262 SFM).
- f 0,40 mm/rev (.016 IPR).

RESULT

- Tool life of 16,000 bores per insert.
- Surface finish better than Ra 1.6 μ m.

BENEFIT

- No insert back taper adjustment needed.
- High cost savings due to more than 100% increase in tool life.

Brake Caliper

Hole Finishing

PCD REAMING PCDRSTM04RLE

- Main bore \varnothing 42mm (1.654").
- Tolerance range 8 μ m.
- Aluminum.
- Varying depth of cut between 1–2mm.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 500 m/min (1,640 SFM).
- f 1 mm/rev (.039 IPR).

RESULT

- Tool life of 400,000–600,000 bores.
- Surface finish better than Ra 1.6 μ m.

BENEFIT

- Secure process and high tool life.
- Productivity increase compared to previous solution.

Brake Caliper

Producing two different diameter

RMB™ MULTIFLUTE REAMING

CHALLENGE

- Location holes \varnothing 39 and 40mm.
- Tolerance range 39 μ m H8.
- Cast iron GGG60.
- Produce both diameters with one tool.
- Machining center with internal coolant.

SOLUTION

- RMB engineered-solution carbide tipped reamer with 10 teeth and internal coolant supply.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 70 m/min (230 SFM).
- f 3,30 mm/rev (.130 IPR).

RESULT

- Tool life of 5,000 holes.
- Surface finish Rz 20 μ m better than required Rz 25 μ m.

BENEFIT

- Very stable and highly productive process as multiple operations are combined at very high cutting data.

Brake Master Cylinder

RIQ PCD insert with chip former geometry

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

- Piston bore \varnothing 25,431mm (1.001").
- Tolerance range 10 μ m.
- Aluminum AISi7.
- Combine multiflute and padded reaming process.
- Round table machine with internal coolant.

CHALLENGE

SOLUTION

- RIQ padded reamer in angular micro finishing setup with semi- and fine-finishing inserts.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- v_c 360 m/min (1,181 SFM).
- f 0,24 mm/rev (.009 IPR).

RESULT

- Tool life of 1,600 bores per insert.
- Surface finish better than Ra 0.4 μ m.
- Cylindricity 7 μ m.

BENEFIT

- No insert back taper adjustment needed.
- Higher productivity due to combining two operations in one tool and increasing feed by more than 30%.
- Very stable process without chip control issues.
- Better cylindricity than requested.

Brake Master Cylinder

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Piston bore \varnothing 25,431mm (1.001").
- Tolerance range 10 μ m.
- Ductile cast iron.
- Replace honing process with reaming.
- Machining center with internal coolant.

SOLUTION

- RIQ padded reamer in angular micro-finishing setup with semi- and fine-finishing insert.
- RIQ full face PCD KD1415™ as finishing insert.

CUTTING DATA

- vc 120 m/min (394 SFM).
- f 0,20 mm/rev (.008 IPR).

RESULT

- Tool life of 1,600 bores per insert.
- Surface finish better than Ra 0.4 μ m.
- Cylindricity 6 μ m.

BENEFIT

- No insert back taper adjustment needed.
- Higher productivity due to combining two operations in one tool.

The **SPEED** to **EXCEED**

Solid Carbide Taps

The Kennametal Solid Carbide Taps deliver the accuracy you demand at up to four times the speed of HSS taps. Longer tool life, exceptional thread quality, and an array of sizes for ferrous and non-ferrous materials make our taps the most trusted and productive tools in the industry.

- Reduce your operating cost by up to 65%.
- Workpiece-specific grades: KC7542™ for steels and cast irons, KC7512™ for aluminum.
- Go 4x faster with 4x the service life of conventional HSS offerings.
- Wide array of styles and sizes for through or blind hole applications.

Tap into something great at your Authorized Kennametal Distributor or at www.kennametal.com.

Steering Knuckle

Hole Finishing

ROMICRON™ FINE BORING

CHALLENGE

- Main bearing bore \varnothing 82mm (3.228").
- Replace setup of padded reamer and cover various diameters with one tool.
- Machining center with internal coolant.

SOLUTION

- Romicon engineered solution. HSK80ASVSB156M SVS4B head.
- CPMT 060204 FW KCK20™.

CUTTING DATA

- vc 400 m/min (1,312 SFM).
- f 0,20 mm/rev (.008 IPR).

RESULT

- Tool life of 1,000 components.
- Surface finish 1.2 μ m.
- Cylindricity better than 6 μ m.

BENEFIT

- Reduce setup time and cost reduction when standard inserts are used.
- Bore tolerance range of 30 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Steering Knuckle

Very uneven spacing

Hole Finishing

RMB™ MULTIFLUTE REAMING

- Axle arm \varnothing 52,935mm (2.084").
- Tolerance range 20 μ m.
- Steel St52-3 and 30MnVS6.
- Surface finish and chip control improvements.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- RMB engineered-solution cermet tipped reamer with wide chip flutes.
- 6° left hand helix and special lead geometry.
- KT6215™ TiAlN coated cermet.

CUTTING DATA

- vc 20 m/min f 2 mm/rev entering hole.
- vc 90 m/min f 2 mm/rev finish hole.

RESULT

- Tool life of 460 components.
- Surface finish Rz 1.3 μ m.

BENEFIT

- More than 30% increase in tool life compared to previous competitive tooling.
- Surface finish Rz 1.3 μ m better than requested Rz 6.3 μ m.

Suspension Subframe

Hole Finishing

RIR™ PADDED REAMING

CHALLENGE

- Location hole \varnothing 18,5–23,0mm (.728–.906").
- Tolerance range 0,1°.
- Steel.
- Improvement in roundness and angularity.
- Transfer line with internal coolant.

SOLUTION

- RIR taper reamer with HSK interface.
- R904S00771 KC6005™ with two edges.

CUTTING DATA

- v_c 32 m/min (105 SFM).
- f 0,133 mm/rev (.005 IPR).

RESULT

- Tool life of 800 bores per insert.
- Surface finish Ra 1.6 μ m.

BENEFIT

- Predictable performance and cost savings because inserts can be reconditioned.
- Easy to set with three clock padded reamer setting fixtures.
- Roundness improvement over competitive solid carbide multiflute reamer.

Mounting Lever

Hole Finishing

PCD COUNTERSINKING PCDCSTM04RLE

- Reaming pre-casted hole \varnothing 20mm (.787").
- Tolerance range 21 μ m H7.
- Aluminum AlSi9Cu3.
- 220mm over hang due to workpiece fixture.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, steel-based tool with HSK63A interface and internal coolant.
- Four effective cutting teeth.
- KD1415™.

CUTTING DATA

- v_c 125 m/min (410 SFM).
- f 0,70 mm/rev (.003 IPR).

RESULT

- Tool life of 60,000 components.
- Surface finish Ra 0.2 μ m.

BENEFIT

- Secure process and less scrap than previous competitive solution.
- No adjustment effort due to solid solution.

CV Joint

ROMICRON™ FINE BORING

CHALLENGE

- Central bore \varnothing 28mm (1.102").
- Tolerance range 18 μ m.
- Steel, hardened.
- Material hardness 61–70 HRC.
- Machining center with MQL internal coolant.

SOLUTION

- Romicon standard head HSK63ASVS00B096M.
- CPGW060208S01015M KB5625™.

CUTTING DATA

- v_c 110 m/min (361 SFM).
- f 0,08 mm/rev (.003 IPR).

RESULT

- Tool life of 500 bores per insert.
- Surface finish Ra 0.3 μ m.

BENEFIT

- Fine adjustments increases productivity resulting in less manufacturing interruptions.
- Bore tolerance range of 18 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Hole Finishing

Turbocharger

Hole Finishing

RIR™ PADDED REAMING

- Bearing bore \varnothing 9,6mm (.378").
- Tolerance range 9 μ m H6.
- Cast iron.
- Interrupted cut.
- Lathe with internal coolant.

CHALLENGE

SOLUTION

- RIR padded reamer in floating toolholder.
- RIR01E1300 KC6005™ coated carbide insert.

CUTTING DATA

- v_c 50 m/min (164 SFM).
- f 0,33 mm/rev (.013 IPR).

RESULT

- Surface finish better than Rz 16 μ m.
- Cylindricity 10 μ m.

BENEFIT

- Increased productivity due to 2x the feed rate when compared to previous competitive tool.

Turbocharger

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Mounting holes \varnothing 12mm (.472").
- Tolerance range 18 μ m H7.

- Machining center with internal coolant.

SOLUTION

- RMS standard reamer with six effective cutting edges and internal coolant.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- v_c 20 m/min (66 SFM).
- f 0,30 mm/rev (.012 IPR).

RESULT

- Tool life of 1,000 components.
- Surface finish better than Rz 10 μ m.

BENEFIT

- Productivity and tool life increase compared to previous solution.

Compressor

Hole Finishing

ROMICRON™ FINE BORING

- Piston bore Ø 23,5mm (.925").
- Tolerance range 18 µm.
- Aluminum 12% Si.
- Machining center BT40 with external coolant.

CHALLENGE

- Standard SVUBB2 head with KR coupling.
- Standard steel boring bar.
- CPGW060204FST KD1400™.

SOLUTION

- v_c 367 m/min (1,204 SFM).
- f 0,07 mm/rev (.003 IPR).

CUTTING DATA

- Surface finish Ra 0.6 µm.
- Roundness better than 5 µm.

RESULT

- 2x the productivity compared to the current solution.
- 80% less adjustment time needed.
- Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

BENEFIT

Compressor

ROMICRON™ FINE BORING

CHALLENGE

- Piston bore \varnothing 25mm (.984").
- Tolerance range 21 μ m.
- Aluminum 15% Si.
- Machining center BT40 with external coolant.

SOLUTION

- Engineered-solution SVS00B head with straight shank clamped in hydraulic chuck.
- CPGW060204FST KD1425™.

CUTTING DATA

- vc 391 m/min (1,283 SFM).
- f 0,20 mm/rev (.008 IPR).

RESULT

- Surface finish better than Ra 2.0 μ m.
- Roundness better than 20 μ m.

BENEFIT

- More than 60% reduction in machining time.
- 80% less adjustment time needed.
- Amortization in less than two months.
- Bore tolerance range of 21 μ m easily and consistently achieved due to 1 μ m per click in radius adjustment.

Compressor

Polished flutes improving chip evacuation

Hole Finishing

PCD COUNTERSINKING PDCSCG22RLE

- Bearing hole \varnothing 12–31mm (.472–1.220").
- Tolerance range 50 μ m.
- Aluminum G-ALSi12.
- Machining center HSK40 with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide-based tool with four guiding lands, flat-bottom drilling point, and internal coolant.
- Two effective cutting and chamfering teeth; KD1415™.

CUTTING DATA

- v_c 440 m/min (1,444 SFM).
- f 0,20 mm/rev (.008 IPR).

RESULT

- Surface finish Rz 1–2 μ m.
- Roundness better than 5 μ m.

BENEFIT

- Productivity increases due to combining different tools in one.
- Tool life increase versus previous solution.

Compressor

KST pre-loaded taper face contact interface

RHM MODULAR REAMING

CHALLENGE

- Piston bore \varnothing 23,5mm (1.220").
- Tolerance range 10 μ m.
- Cast iron GGG60.
- Machining center HSK63 with internal coolant.

SOLUTION

- RHM modular reamer with six cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- SIF™ steerable tooling.

CUTTING DATA

- v_c 125 m/min (410 SFM).
- f 0,75 mm/rev (.030 IPR).

RESULT

- Surface finish better than Rz 4 μ m.

BENEFIT

- Higher productivity than single-edged padded reamer.

Hydraulic Valve Block

Hole Finishing

RIR™ PADDED REAMING

- Spool bore \varnothing 18,5mm (.728").
- Tolerance range 10 μ m.
- Cast iron.
- Up to 4mm varying depth of cut.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- RIR padded reamer with up to 100mm long cermet guide pads.
- Engineered solution RIR insert with modified chipformer.

CUTTING DATA

- v_c 70 m/min (230 SFM).
- f 0,125 mm/rev (.005 IPR).

RESULT

- Tool life of 400 min per double-edged insert.
- Roundness and straightness within 10 μ m.

BENEFIT

- Very stable process control and predictable performance.

Hydraulic Valve Block

Hole Finishing

RMS™ MULTIFLUTE REAMING

CHALLENGE

- Rinse slider bore Ø 9,534mm (.375").
- Tolerance range 6 µm.
- Ductile cast iron 0.7060.
- Three interrupted cuts at a reaming depth of 100mm.
- Special dimensional accuracy requirement.

SOLUTION

- RMS solid carbide reamer engineered solution.
- Special back taper configuration and support margins lands.
- KC6305™ TiAlN coated carbide.

CUTTING DATA

- vc 150 m/min (492 SFM).
- f 0,72 mm/rev (.028 IPR).

RESULT

- Tool life of 500 pieces.

BENEFIT

- Speed and feed rates are almost 30x faster resulting in higher productivity.
- Less scrap due to consistent accuracy.

Hydraulic Valve Block

Hole Finishing

PCD COUNTERSINKING PCDCSC02RLE

- Thread core hole \varnothing 24mm (.945").
- Tolerance range 21 μ m F7.
- Aluminum AISi9Cu3.
- Pre-drilled hole.
- Machining center DV40 with internal coolant.

CHALLENGE

SOLUTION

- PCD tipped, carbide-based tool with internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 360–750 m/min n = 7,500 RPM.
- f 0,20 mm/rev (.008 IPR).

RESULT

- Tool life of 100,000 holes.
- Surface finish Ra 0.1 μ m.

BENEFIT

- Productivity increase due to combining two operations into one.
- Carbide base increases tool life and accuracy.

ABS Valve Block

PCD COUNTERSINKING PDCSTA02RLE

CHALLENGE

- Bearing bores \varnothing 20,99 and 24,275mm.
- Tolerance range 20 μ m.
- Aluminum AISi1.
- Pre-casted hole with 0,15mm depth of cut.
- Machining center HSK63A with internal coolant.

SOLUTION

- PCD tipped, steel-based tool with SIF™ steerable interface and internal coolant.
- Two effective cutting and chamfering teeth.
- KD1415™.

CUTTING DATA

- vc 300 m/min (984 SFM).
- f 0,35 mm/rev (.014 IPR).

RESULT

- Tool life of 150,000 components.
- Surface finish Ra 0.4–0.6 μ m.

BENEFIT

- Very stable process control and predictable performance.
- Very favorable chip creation.

Hole Finishing

Bearing Seat

KST pre-loaded taper face contact interface

Hole Finishing

RHM™ MODULAR REAMING

- Reaming Ø 35mm (1.378").
- Tolerance range 20 µm.
- Carbon steel, annealed, long-chipping.
- Blind hole limiting chip evacuation.
- Machining center with internal coolant.

CHALLENGE

SOLUTION

- RHM modular reamer with eight cutting edges.
- KT325™ uncoated cermet.
- Standard lead geometry.
- Short engineered-solution axial clamping tool body.

CUTTING DATA

- v_c 120 m/min (394 SFM).
- f 1,18 mm/rev (.046 IPR).

RESULT

- Tool life of 145,000 holes.
- Surface finish better than Rz 6.3 µm.

BENEFIT

- Predictable tool life as only 2 µm diameter deviation after 10,000 holes.

Bearing Seat

RIQ single adjustment screw setup

FB easy to setup fine-boring cartridges

RIQ™ QUATTRO CUT™ PADDED REAMING

- Reaming Ø 47mm (1.850").
- Tolerance range 19 µm N6.
- Aluminum AISi9Cu3.
- Machine four different diameters, two spot faces, and four different chamfers with one tool.

CHALLENGE

- RIQ padded reamer with full-face PCD KD1415™ insert having four cutting edges.
- SIF™ steerable interface between reaming and fine boring section.

SOLUTION

- vc 236 m/min (774 SFM).
- f 0,08 mm/rev (.003 IPR).

CUTTING DATA

- Surface finish better than Rz 16 µm.

RESULT

- No insert back taper adjustment needed.
- Less operations increase productivity.
- Higher accuracy than multiple operations.
- Full-face PCD inserts reduce cost per hole.

BENEFIT

FB CARTRIDGE FINEBORING

- Reaming Ø 144mm (5.669").
- Tolerance range 40 µm H7.
- Aluminum AISi9Cu3.
- Machine two different diameters.

CHALLENGE

- Standard FB fine-boring cartridges with almost back lash free fine adjustment.
- CCGW060204 KD1415™.

SOLUTION

- vc 723 m/min (2,372 SFM).
- f 0,08 mm/rev (.003 IPR).

CUTTING DATA

- Surface finish better than Rz 16 µm.

RESULT

- Radial adjustment does not influence axial adjustment of inserts resulting in faster setup.
- Productivity increase with less operations.
- More accurate than previous solution.

BENEFIT

Heat Exchanger Plates

KST pre-loaded taper face contact interface

Hole Finishing

RHM™ MODULAR REAMING

- Tube holes Ø 25,25mm (.994").
- Tolerance range 21 µm H7.
- Stainless Steel 304L.
- Machining center with external coolant.

CHALLENGE

- Special RHM head with six cutting edges.
- KC6305™ TiAlN coated carbide.
- Standard tool body with SIF™ steerable backend.

SOLUTION

- vc 36 m/min (118 SFM).
- f 0,79 mm/rev (.031 IPR).

CUTTING DATA

- Tool life of 167 m.

RESULT

- Higher productivity as a result of a 50% higher feed rate and 2x speed.
- 200% more tool life than previous competitive solution.

BENEFIT

RHM™ MODULAR REAMING

- Tube holes Ø 25,25mm (.994").
- Tolerance range 100 µm.
- Alloy steel, long-chipping.
- Machining center with internal coolant.

CHALLENGE

- Special RHM head with six cutting edges.
- KT6215™ TiAlN coated cermet.
- Standard 5xD body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

SOLUTION

- vc 90 m/min (295 SFM).
- f 0,48 mm/rev (.019 IPR).

CUTTING DATA

- After more than 30 minutes only minor wear is visible.

RESULT

- Reduced machining time to less than 60 min per 180 holes.
- Predictable tool life as only 2 µm diameter deviation after 30 minutes.

BENEFIT

Heat Exchanger Plates

KST pre-loaded taper face contact interface

Hole Finishing

RHM™ MODULAR REAMING

- Tube holes \varnothing 25,25mm (.994").
- Tolerance range 21 μ m H7.
- Steel, annealed, long-chipping.
- Replace HSS shot core drilling.
- Machining center with internal coolant.

CHALLENGE

- Special RHM head with six cutting edges.
- KT325™ uncoated cermet.
- Standard 5 x D body clamped into hydraulic chuck.

SOLUTION

- vc 84 m/min (276 SFM).
- f 0,49 mm/rev (.019 IPR).

CUTTING DATA

- Tool life of 189 m.

RESULT

- 10x faster when compared to previous competitive core drilling solution.
- 16x higher tool life.

BENEFIT

RHM™ MODULAR REAMING

- Tube holes \varnothing 32mm (1.260").
- Tolerance range 25 μ m H7.
- Low alloy steel, annealed.
- Interrupted cut.
- Machining center with internal coolant.

CHALLENGE

- Standard RHM head with eight cutting edges.
- KC6305™ TiAlN coated carbide.
- Standard 5 x D body clamped into hydraulic chuck.
- KSEM HPGM used for drilling into solid.

SOLUTION

- vc 60 m/min (197 SFM).
- f 1,12 mm/rev (.044 IPR).

CUTTING DATA

- Tool life of 624 holes.

RESULT

- Almost 29% productivity increase.
- Close to 25% overall cost reduction due to higher tool life and higher cutting data.

BENEFIT

Pump Housing

Full-face PCD insert with chipformer geometry

Hole Finishing

RIQ™ QUATTRO CUT™ PADDED REAMING

CHALLENGE

- Piston bore Ø 18,5mm (.728").
- Tolerance range 21 µm H7.
- Aluminum.
- Heavy interrupted cut and surface finish Rz 6.3.
- Machining center with internal coolant.

SOLUTION

- RIQ padded reamer with helical chip flute and helical solid carbide guide pad.
- Full-face KD1415™ insert having four cutting edges.
- Positive wiper insert geometry.

CUTTING DATA

- vc 230 m/min (755 SFM).
- f 0,15 mm/rev (.006 IPR).

RESULT

- No chip evacuation issues.
- No burr, marks, or scratches at entrance or exit of interruptions.

BENEFIT

- No insert back taper adjustment needed.
- Half cycle time compared to previous competitive tooling.

Hydraulic Pump

RIR™ PADDED REAMING

CHALLENGE

- Piston bore \varnothing 9,365mm (.369").
- Tolerance range 10 μ m.
- Ductile cast iron GGG40.
- Machining center with internal coolant.

SOLUTION

- RIR padded reamer with cermet guide pads.
- R901EGS06F AlTiN coated carbide.

CUTTING DATA

- v_c 53 m/min (174 SFM).
- f 0,043 mm/rev (.002 IPR).

RESULT

- 294 bores per double-edged insert.
- Surface finish Ra 0.8 μ m.

BENEFIT

- 200% tool life increase.
- More than 10% reduction in cycle time.
- Consistent quality and stable process due to better chip formation.
- Tolerance achieved was a 50% improvement compared to the previous competitive solution.

Valve Housing

Hole Finishing

ROMICRON™ FINE BORING

- Various bore \varnothing 170–480mm (6.7–18.9").
- Tolerance range 75 μ m.
- Cast iron GG25.
- Automated wear compensation at interrupted cut.
- Machining center HSK100 with internal coolant.

CHALLENGE

- Semi-standard SVU120 CLB head with engineered-solution diameter extender and automatic wear compensation with CLB.
- CPGW09T308S01015C KB1630™.

SOLUTION

- vc 800 m/min (2,625 SFM).
- f 0,12 mm/rev (.005 IPR).

CUTTING DATA

- Tool life of 1,200 minutes per insert.
- Surface finish better than Rz 16 μ m.

RESULT

- More than 30% reduction in manufacturing lead time.
- Third shift and weekend without operators.
- 1 μ m per click in radius adjustment executed by machine.

BENEFIT

Pump Housing

Hole Finishing

ROMICRON™ FINE BORING

CHALLENGE

- Bore Ø 38,1mm (1.500").
- Tolerance range 18 µm.
- Cast iron.
- Interrupted cut at figure eight hole.

SOLUTION

- Romicon KM50SVS0B103M standard head.
- CPGW2151S0415C KB1645™.

CUTTING DATA

- vc 197 m/min (646 SFM).
- f 0,05 mm/rev (.002 IPR).

RESULT

- Tool life of 450 workpieces.
- Surface finish better than Ra 32 µm.
- Roundness better than 8 µm.

BENEFIT

- Secure finishing process with no oversized bores.
- Less adjustment effort.
- Amortization in less than four months.
- Bore tolerance range of 18 µm easily and consistently achieved due to 1 µm per click in radius adjustment.

Wind Energy Housing

Multiple boring heads based on KM63™ shank

Hole Finishing

KM™ FINE BORING

- Bearing seat Ø 2.700mm (106.3").
- Tolerance range 210 µm H7.
- Cast iron GGG40.
- Pull machining – spindle needs to adapt bridge inside workpiece.

CHALLENGE

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish, and fine finish head.

CUTTING DATA

- vc 240 m/min (787 SFM).
- f 0,28 mm/rev (.011 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Machining in one workpiece results in a productivity increase.
- Investment saving as only one base bridge needed.
- Ease of use due to KM coupling for fast and accurate cutting unit change.

Wind Energy Housing

Multiple boring heads based on KM63™ shank

KM™ FINE BORING

CHALLENGE

- Bearing seat Ø 3000mm (118.1").
- Tolerance range 210 µm H7.
- Ductile cast iron GGG40.
- Machining center without coolant.
- Tolerance range 210 µm H7.

SOLUTION

- Welded space frame bridge with KM coupling to adapt cutting units.
- One base bridge to adapt roughing, semi-finish, and fine finish head.

CUTTING DATA

- vc 240 m/min (787 SFM).
- f 0,28 mm/rev (.011 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Investment saving as only one base bridge and KM cutting units are used for diameter 2.700mm and 3.000mm.
- Ease of use due to KM coupling for fast and accurate cutting unit change.

Wind Energy Housing

1 μm per click in radius adjustment

Hole Finishing

ROMICRON™ FINE BORING

- Flange \varnothing 1260–1400mm (49.6–55.1").
- Tolerance range 125 μm H7.
- Cast iron GGG40.
- One base bridge for multiple diameters.
- Machining center without coolant.

CHALLENGE

SOLUTION

- Romicon standard modular MF40 element with engineered-solution aluminum bridge.
- CPGT060204/08HP KC5410™.

CUTTING DATA

- v_c 200 m/min (650 SFM).
- f 0,12 mm/rev (.005 IPR).

RESULT

- Tool life of 73 min.

BENEFIT

- Investment saving as only one base bridge needed.
- Use of standard off the shelf Romicon tool.
- Ease of use due to Romicon.

Synchronous Joint

Balanced by design

ROMICRON™ FINE BORING

CHALLENGE

- Pin machining \varnothing 13mm (.512").
- Tolerance range 6 μ m.
- Steel 42CrMo4 (4140).
- Machining center with internal coolant.

SOLUTION

- Romicon standard HSK63ASVUBB1095MCLB head with engineered solution pin boring bar.
- TCMT110202FP KTP10™.

CUTTING DATA

- v_c 160 m/min (525 SFM).
- f 0,1 mm/rev (.004 IPR).

RESULT

- Tool life of 300–450 components per insert.
- Surface finish Ra 0.3 μ m.
- Cpk value \geq 1,33.

BENEFIT

- Use of standard off-the-shelf Romicon tooling.
- Bore tolerance of 6 μ m consistently achieved due to 1 μ m per click in radius adjustment.

Hole Finishing

Landing Gear

Feed out slide

Hole Finishing

MOTION TOOLING

- Bottle boring \varnothing 65–85,3mm (2.559–3.358").
- Steel 34CrNiMo6; 4340M.
- Generate complex rotationally symmetric shape inside pre-machined workpiece.
- Custom machining center with internal coolant.

CHALLENGE

SOLUTION

- Motion tool with two slides activated by drawbar.
- Hole shape generated while tool is retracted.
- Engineered-solution insert to improve chip formation.

CUTTING DATA

- v_c 31 m/min (102 SFM).
- f 0,20 mm/rev (.008 IPR).

RESULT

- Customer proprietary information.

BENEFIT

- Time savings compared to previous boring bar.
- Bottle boring \varnothing 65–85,3mm (2.559–3.358").
- Steel 34CrNiMo6; 4340M.
- Generate complex rotationally symmetric shape.

Ream to the Extreme

The RHM™ Modular Reaming System offers performance levels commonly achieved with solid carbide reaming tools. With a unique, preloaded KST coupling, it is best suited to ream IT6 and IT7 high-quality holes in steel, stainless steel, and cast irons.

RHM offers you:

- A market-leading runout accuracy.
- A strong proprietary coupling that enables higher feed rates.
- Latest technology carbide and cermet grades for high cutting speeds and extended tool life.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com.

RMS™ Multiflute Reaming Tools

RMS™ Multiflute Reaming Tools achieve highest metal removal rates from diameter 5–14mm with no customization. All standard reamers are ground to an ISO H7 tolerance class hole to address most common applications. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use standard SIF™ Steerable Hydraulic Chucks or SIF Adapters for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming-specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- All RMS reamers offer internal coolant supply.

Customization

- Diameters .055–.557" (1,40–14,15mm) available with and without internal coolant in .00004" (0,001mm) steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- Solid cermet reaming tools and tooling for heat-resistant materials are available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT7 hole tolerance class available.
- Starting with Ø 10mm (.393") in IT6 hole tolerance available.

RMB™ Multiflute Reaming

The RMB Multiflute Reaming System achieves solid carbide and solid cermet metal removal rates from 14–20mm with no customization required. All standard reamers are ground to an ISO H7 tolerance class hole to address most applications, giving you an economical solution for large diameter sizes compared to solid carbide reamers. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adapters for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality.

Features and Benefits

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.
- Adjustment screw at straight-fluted RMB reamers to change internal coolant supply from axial to radial.

Customization

- Diameters up to 1.968" (50mm) available with and without internal coolant in .00004" (0,001mm) steps.
- Intermediate diameters of standard program available as Simple Specials with short delivery time.
- RMB tooling for machining heat-resistant materials is available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Adjustment screw to change internal coolant supply from axial to radial.

RHM™ Modular Reaming System

The RHM Modular Reaming System achieves solid reamer metal removal rates from diameter 14–50mm with no customization required. All standard reamer heads are ground to achieve an ISO H7 tolerance class addressing most applications. This system gives you fast and easy change of heads using axial actuation toolholders, and replaceable heads eliminate the need for repeating runout check. Specific coatings and lead configurations enable high-speed machining of steel, stainless steel, cast iron, and non-ferrous materials at accelerated speeds.

Primary Application

Use SIF™ Steerable Hydraulic Chucks or SIF Adapters for easy compensation of radial runout and angular inaccuracies of the spindle to achieve the highest possible hole straightness and surface quality. Radial or axial actuation tool bodies are available at diameter 20mm.

Features and Benefits

Taper-Face Contact with KST Coupling

- Symmetrical torque transmission near head.
- Higher feed rate than conventional reaming tools.
- Better surface quality and tool life due to less tendency to vibrate.
- No need for head to body orientation.

Higher Productivity and Profitability

- Longer tool life with increased hole and surface quality due to lapped ground leads.
- Highest metal removal rate at higher speeds and feeds due to reaming specific grades and substrates.
- Improved straightness and cylindrical form compared to competitive tools and reduced vibration tendency due to unequal flutes.

Customization

- Diameters up to 1.968" (50mm) available with and without internal coolant in .00004" (1 μm) steps.
- Intermediate diameters of standard program available with short delivery time.
- RHM tooling for machining heat-resistant materials, as well as different lengths and couplings or shanks, available on request.

- For hole tolerance H7.
- Intermediate sizes ground to achieve IT6 or IT7 hole tolerance class available.
- Please order screw for axial use or pull stud separately.

Application

Coolant flow

max 80 bar/1160 psi

Basic Design Overview • Multiflute Reaming Tooling

Kennametal offers two basic reaming designs, cylindrical margin land and up sharp. The cylindrical margin land design is used for all standard items of the RMS™, RMB™, and RHM™ reaming platforms. Engineered-solution tooling based on up sharp reaming design offers high hole quality and long tool life in exotic cases and high-temp alloys as only the sharp cutting edges contact with the workpiece.

Cylindrical Margin Reaming “C”

Up Sharp Reaming “U” & “NC”

Basic Lead Differences

Single Lead

The single lead chamfer design is used with all standard RMS, RMB, and RHM reaming tooling and enables the tool to be applied on various materials without customization. Design can be modified to meet specific applications such as thin walls, straightness correction, etc.

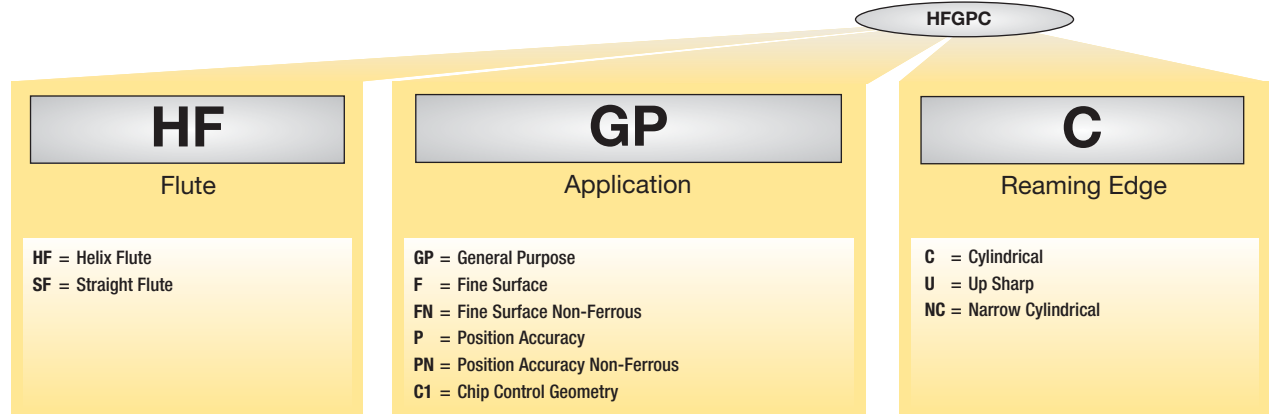

Double Lead

Double lead designs are available as engineered solutions and enable higher surface quality and feed rates in general. Lead dimensions require customization regarding the material to be machined for best machining results.

Lead Design Overview

Hole Finishing

RIQ™ Quattro Cut™ and RIR™ Padded Reamers

Primary Application

Master the highest precision reaming applications with standard inserts in almost all materials with two unique systems available: RIR for small diameter and RIQ for easy setup in larger diameters.

The RIQ reamers are available starting at diameter 16mm with four edges for lowest cost per hole. They contain a proprietary pocket seat only requiring setup of the diameter, which is a huge benefit in terms of simplicity over other systems that require the diameter and back taper to be adjusted simultaneously. The RIR padded reamers are also proprietary and are available starting at diameter 6mm with two edges.

Features and Benefits

Higher Productivity and Profitability

- Higher tool life with Kennametal grades.
- User friendly — RIQ padded reamers reduce setup time.
- Make use of four full edges even in PCD or PCBN when using RIQ inserts.

Complete Insert Portfolio

- Large offering of available lead geometries — E13, EDS, EGU, EKS, radius, and taper inserts.
- Large offering of grades — coated and uncoated carbide, cermet, PCBN, and PCD.

Customization

- All RIQ tooling is engineered according to your specific needs in diameters .630–13.780" (16–350mm) with internal coolant.
- All RIR tooling is engineered according to your specific needs in diameters .237–13.780" (6–350mm) with internal coolant.
- RIR taper reamer for cone-shaped holes is available on request.
- Multiflute and step reaming applications and special blade shapes are available upon request.
- Necessary measuring and adjustment equipment is available as standard.

Application recommendation	RIR	RIQ
	<p>Bore tolerances less than 10 µm (can be greater). Geometric tolerancing down to 2 µm. Skilled workforce experience required. Multidiameter bore possible but less stability during end face machining.</p> 	<p>Bore tolerances less than 10 µm. Geometric tolerancing down to 2 µm. Lower skilled workforce, easier adjustment. Multidiameter bores. Blind bore end face machining, greater stability of insert.</p> 
Pocket seat	Flat with clamping groove in blade.	Serrated. Greater insert stability.
Cutting edges	2 (1 with PCD or CBN and 1 within diameter range 6–8mm [0.236–0.315"])	4 (Including PCD, CBN, and cermet)
Special blade forms	yes	yes
Multiple insets on diameter	no	yes
Blade adjustment	Diameter and back taper.	Diameter only, back taper preset.
Blade adjusting screws	2	1
Number of insert sizes	5	3
Chamfer or seat machining	Possible, but adjustment required on length and angle.	Yes. Angle preset into body. Minimal adjustment for length.
General comments	Requires end users to be familiar with adjusting single blade reamers. High accuracy for single or multiple diameters.	Requires end users not to be familiar with typical adjusting single blade padded reamers. Complex multidiameter bores with chamfers and leads between bores. Multidiameter for high accuracy and higher productivity (feed rate).

Micro-Finishing Tool

Valve Seat Tool

Tool for Differential Housing

Blade Identification System

The RIR and RIQ blade part numbers are made up of 10 numbers selected from 5 categories. The first three digits indicate the reamer type, the next two digits are determined by reamer size, and the balance of the numbers allow specific blade configurations and grades.

Basic Principle

Kennametal's padded reaming tools follow two basic rules. The result, perfectly cylindrical bores with exceptional straightness and superior surface finishes combined with a bore diameter tolerance held to microns:

1. A SINGLE-POINT BORING TOOL SUPPORTED BY BEARING PADS, FLOATING ON A COOLANT FILM.
2. A TOOL MUST DEFLECT ONTO THE PADS, ON ENTERING THE HOLE, IN ORDER TO OBTAIN THE CORRECT SIZE.

Each padded reamer hosts a selection of guide pads that are positioned to resist the cutting forces created during machining. A minimum of two guide pads are necessary guiding the reamer in the predrilled hole.

The lubricant, in the form of coolant, gets between the pad and component surface, resulting in frictionless stability during cutting.

Guide pads are ground slightly smaller than the targeted diameter to machine a certain overhang between guide pads and insert cutting edge necessary for the machining process. Most common is a 10 µm overhang but can vary depending on the material to be cut.

As padded reamers are specifically ground, relative to diameter and tolerance, guide pads are not flexible or adjustable. The pad below the insert ensures hole roundness while the pad opposite to the insert defines the bore diameter. Each further pad improves the roundness, straightness, and bridges over interruptions in the bore area.

These carbide, cermet, PCD, and ceramic guide pads are selected and brazed or bonded to the body depending on coolant availability/type and abrasiveness of the material to be cut. Especially with high L/D ratio tooling (e.g., cam and crank boring bars), bonding of guide pads offers higher precision due to less thermal influence to the steel base body.

● first choice ○ alternate choice

material	P	M	K	N	S	H	MQL
carbide	●	○	●	●		○	
cermet	●	○	●			○	
ceramic			●		●		
PCD			○		●		●

RIR Clamping

RIR reaming inserts are clamped by a single screw to avoid weakening of the pocket seat against common clamping wedges. This clamp screw has a left-hand thread to securely move the insert axially towards the stop pin until the insert aligns there. The stop pin ensures correct advancement of cutting insert to guiding pad.

Like other types of padded reamers using rectangular reaming inserts, two adjustment screws and wedges are required to adjust diameter and back taper accurately. Therefore, RIR is the preferred solution for diameters below RIQ range.

RIQ Clamping

There is no need to adjust back taper as this is already predefined by the serrations. Only the overhang of the cutting edge, relative to the guide pads, needs to be adjusted.

The right-hand clamp screw locks the insert securely onto the high-precision serration. The three cutting edges that are not in use are completely covered by the body while not touching them. All four cutting edges of full-face CBN and PCD inserts can be completely used without the danger of accidentally losing one of them.

Adjustment Wedge and Screw

The proprietary adjustment wedge prevents any unpredictable rotation. This avoids errors during setup that cause tool damages.

RIR Tooling Setup

RIQ Tooling Setup

Hole Finishing

Valve Seat Tools • RIQ™ Quattro Cut™ Based Tooling

RIQ technology enables bypassing any angular adjustment of the insert and provides up to 12 cutting edges.

Valve Seat Tools • Machining Center Solutions

RIQ valve seat tooling with integrated hydraulic chuck to clamp multiflute RMS™ or RIR™ guide pad reamer.

Machining Center • Integrated Hydraulic Chuck

RMS Multiflute Reamer

for regular runout accuracy of valve seat to value guide demands

RIR Guide Pad Reamer

for highest runout accuracy of valve seat to value guide demands

Machining Center Process • All Angles Formed to Finish Specifications in TWO PASSES

Process A (Preferred)

Tool 1 • Semi-Finish:

- Finish of secondary angles.
- Semi-finish of primary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish:

- Finish of primary angles.
- Finish of guide bore (short version of RMS or RIR reamer).

Process B (Alternate)

Tool 1 • Finish Valve Seat:

- Finish of primary and secondary angles.
- Create pilot bore (short version of RMS or RIR reamer).

Tool 2 • Finish Valve Guide:

- Finish of guide bore (short version of RMS or RIR reamer).

Valve Seat Tools • Transfer Line Solutions

RIQ valve seat tooling with carbide bushing guiding RMS or RIR reamer machining the valve guide on transfer lines.

Transfer Line • Integrated Carbide Bushing

Multiflute Reamer RMS

for regular runout accuracy of valve seat to value guide demands

RIR Guide Pad Reamer

for highest runout accuracy of valve seat to value guide demands

Transfer Line Process • All Angles Formed to Finish Specifications in ONE PASS

Process A (Preferred)

Tool 1 • Semi-Finish:

- Semi-finish of secondary angles.
- Semi-finish of primary angles.

Tool 2 • Finish:

- Finish of primary angles.
- Finish of secondary angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

Process B (Alternate)

Tool 1 • Semi-Finish and Finish Combined:

- Finish of primary and secondary seat angles.
- Finish of guide bore with feed out multiflute or guide pad reamer (squirt-through type).

Causes of and Remedies for Reaming Problems

problem

Drill diameter too large

cause

1. Reaming tool running out-of-center.
2. Concentricity of pilot hole and ream machining unsatisfactory.
3. Built-up edge.
4. Unsuitable cooling lubricant.
5. Reaming tool Ø too large.

possible remedy

- Use SIF™ equalizing adapter.
- Re-align, use floating head.
- Change cooling lubricant.
- Change cutting speed.
- Measure reamers and send for repairs.

Drill diameter too small

1. Reamer worn.
2. Unsuitable cooling lubricant.
3. Reaming allowance too small.

- Replace and refit tool.
- Change cooling lubricant.
- Increase reaming allowance.

Conical drill profile wider towards drill runout

1. Concentricity of pilot hole and reaming unsatisfactory.
2. Positioning accuracy of pilot hole to reaming.

- Re-align, use SIF equalizing adapter.
- Correct positioning accuracy.

Conical drill profile wider at drill entry point

1. Concentricity of pilot hole and reaming unsatisfactory.
2. Reaming tool skim cutting with ledger.

- Re-align, use floating head.
- Securely clamp reaming tool axially.

Hole out-of-center and/or showing chatter marks

1. Reaming tool running out-of-center.
2. Slanted cutting surface/asymmetrical cutting.
3. Workpiece twisted.

- Use SIF equalizing adapter.
- Flatten surface before drilling or reaming.
- Take the direction of impact into account when clamping the workpiece.

Surface quality does not meet specification

1. Tool cutters worn.
2. Reaming tool running out-of-center.
3. Incorrect technology data (cutting parameters).
4. Inadequate chip evacuation.

- Replace and refit tool.
- Use SIF equalizing adapter.
- Change cutting parameters in machining range.
- Optimize coolant supply; increase coolant pressure and volume.

Feed grooves

1. Built-up edge.

- Change cooling lubricant.
- Change cutting speed.

Hole Finishing

SIF™ Steerable Toolholder

Primary Application

SIF Steerable Toolholders should be used for easy compensation of radial runout and angular inaccuracies caused by the machine spindle or gravity. SIF tooling improves hole roundness for highest possible hole straightness and surface quality. Runout-optimized reaming tools provide higher process stability and longer tool life.

Use a separate SIF tooling package for each machine to ensure best configuration between reaming tool and spindle and HSK bushes for faster tool change to avoid repeating adjustments.

Features and Benefits

Higher Productivity and Profitability

- Easy compensation of radial runout and angular inaccuracies increases process control and tool life.
- Less time-consuming adjustment due to eight radial screws.
- Increase stability due to fewer interfaces by use of RIQ™ Quattro Cut™, RIR™, and RHM™ reaming tooling with SIF backend.

Versatility

- Standard DV, BT, CV, and HSK adapters can be used in combination with SIF hydraulic chucks for most precise concentric clamping, highest accuracy, and flexible clamping method using hydraulic chuck sleeves.
- HSK bushes with SIF coupling enables fast tool exchange and eliminates the need for repeated runout adjustment, reducing downtime.

Customization

- Different length versions and coupling size combinations are available.

- Through-the-toolholder coolant capability — form AD or form B.
- Suitable for SIF adapters.

SIF Tooling Setup

Step 1: Rough setup of runout at flange

- Set gage (TIR) at SIF flange.
- Tight axial clamping screws 6–8 Nm (4.4–5.9 ft. lbs.).
- Use radial adjustment screws to achieve 5 μm (.0002") runout.

1

Step 2: Fine setup of runout at flange

- Tight axial clamping screws crosswise:
SIF70/80 18 Nm (13.3 ft. lbs.)
SIF100 32 Nm (23.6 ft. lbs.)
- Use radial adjustment screws to achieve 2 μm (.00008") runout.
- All radial adjustment screws to be clamped tight at 4 Nm (3.0 ft. lbs.).

2

Step 3: Adjustment of runout at front

- Set gage (TIR) at control grind, cylindrical land, or guide pads.
- Use axial adjustment screws to achieve a maximum runout error of 2 μm (.00008").
- All axial adjustment screws to be clamped tight at 4 Nm (3.0 ft. lbs.).

3

Step 4: Final runout check

- Check using gage (TIR) at flange; no deviation by theory.
- If needed, use radial adjustment screws to set runout below 2 μm (.00008").
- Any modification of radial setup demands an axial runout check and adjustment, if necessary.

4

PCD Customized Tooling

PCD tooling offers the highest productivity and accuracy, reduced tooling costs due to long tool life, and secure process control due to close tolerances, increasing your overall quality and reducing scrap rate and inspection costs.

Primary Application

Use Kennametal PCD tooling for machining aluminum and aluminum alloys, magnesium, copper, brass, bronze, plastics (GFRP, CFRP), MMC (Metal Matrix Composite), graphite, tungsten carbide green-stages, and ceramic. Choose from various standardized PCD product platforms for drilling, counterboring, and reaming. Steel- and solid carbide-based tool body designs are available for direct spindle coupling with or without adjustable PCD pocket seats or with steerable SIF™ backend.

Features and Benefits

Higher Productivity and Profitability

- Highest chip removal rates and less tool changes by using multistep tooling.
- Extremely long tool life even when maintaining very tight tolerances.
- Reduced built-up edge and burr formation, improved concentric hole shape with multistep tooling, and less influence on surface microstructure of the workpiece.

Product Platform Versatility

- All PCD drilling, counterboring, and reaming tools are engineered according to your specific needs in diameter, shape, radii, and steps.
- Various PCD grades are available to match your specific material.
- Multistep drilling, profiling, countersinking, and reaming platforms available.
- Coolant channel design for optimized chip evacuation with regular and MQL.
- Steel-based tool body designs are available for direct spindle coupling or enable adjustable pocket seat design for highest accuracy even at larger sizes.
- Carbide-based tool bodies enable highest accuracy and tool life at high L/D ratio applications.
- Tooling designs with SIF steerable interface optimizes runout and enables highest accuracy and tool life.
- All PCD tooling is prebalanced by design. Further precision balancing is available on request.

PCD Tooling Basic Design Overview

Kennametal offers you certain PCD design platforms to optimally fulfill your machining task. These basic designs are independent, whether you are drilling, countersinking, profiling, reaming, or milling. All tooling designs are capable of internal coolant, MQL coolant, and are balanced by design

Runout of the Spindle

Depending on spindle runout and/or higher L/D ratios

runout <= 0,005mm		runout >= 0,006mm	
	PCD-ST PCD-SC		PCD-ST or PCD-SC with hydraulic chuck and SIF shank
	PCD-STM		PCD-STA with SIF PCD-SCA with SIF

PCD Drill-Point Design Overview

CT

- PCD corner tipped.
- Carbide-based body design.
- Diameter >4,2mm (.166").

Use for general application at moderate cutting speeds up to 12 x D drilling depth.

CTE

- PCD corner tipped, E point.
- Carbide-based body design.
- Diameter >4,2mm (.166").

Use at precasted holes at moderate cutting speeds up to 12 x D drilling depth.

SW

- Full-face sandwich PCD.
- Carbide-based body design.
- Diameter >5mm (.197").

Use at high cutting speeds and abrasive materials up to 5 x D drilling depth.

MT

- PCD corner tipped.
- Steel- and carbide-based body design.
- Diameter >12mm (.473").

Use for drilling casted surfaces up to 3 x D drilling depth.

Cutting Edge and Margin Land Requirements

Determine correlations between spindle to edge overhang, amount of cutting, and margin lands for guidance and increased precision.

Romicron™ Fine-Boring System

Primary Application

The Romicron PCD tooling portfolio has a diameter range of 4–213mm and reduces setup time and scrap rates while increasing your overall equipment efficiency. This premium fine-boring system can be used in most materials commonly found in metalcutting environments by applying the latest Kennametal Standard ISO Turning Inserts. Its closed loop boring (CLB) provides a unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm diameter adjustment per increment. Romicron should be used where extremely close tolerances are critical to the overall process or where fast and easy diameter adjustments are needed.

Features and Benefits

Higher Productivity and Profitability

- Reduce scrap rates and setup time due to the backlash-free adjustment.
- Make use of the entire tool life of used inserts as diameter adjustment can be done inside of the machine, avoiding routine insert changes in the setup room.
- Avoid time-consuming control cuts or sister tooling.
- No training or experience is needed, resulting in less stress during adjustments.

Versatility

- Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.
- Use SVS00B-SVS6B prebalanced heads as the preferred solution for diameter .984–5.472" (25–139mm).
- SVUBB1 tooling for high-speed applications .157–.650" (4–16,5mm).
- Large diameter range of .236–3.937" (6–100mm) using SVUBB2 tooling.
- SVU65 and SVU92 for larger diameters of 2.79–8.386" (71–213mm).

Ease of Adjustment

- No tools are needed so adjustment can take place on the machine tool. Eliminates the need to remove and return the boring head to the presetting area providing increased productivity.
- SEE, FEEL, and HEAR the adjustment mechanism for fail-safe size control.

Customization

- Engineered solutions available for multistep or high length-to-diameter tooling.
- Anti-chatter devices and various non-standard machine spindle coupling sizes are available.

Boring range, coolant capacity, and maximum RPM features for all Romicron boring heads.

WARNING:
This position must be kept to avoid collisions.

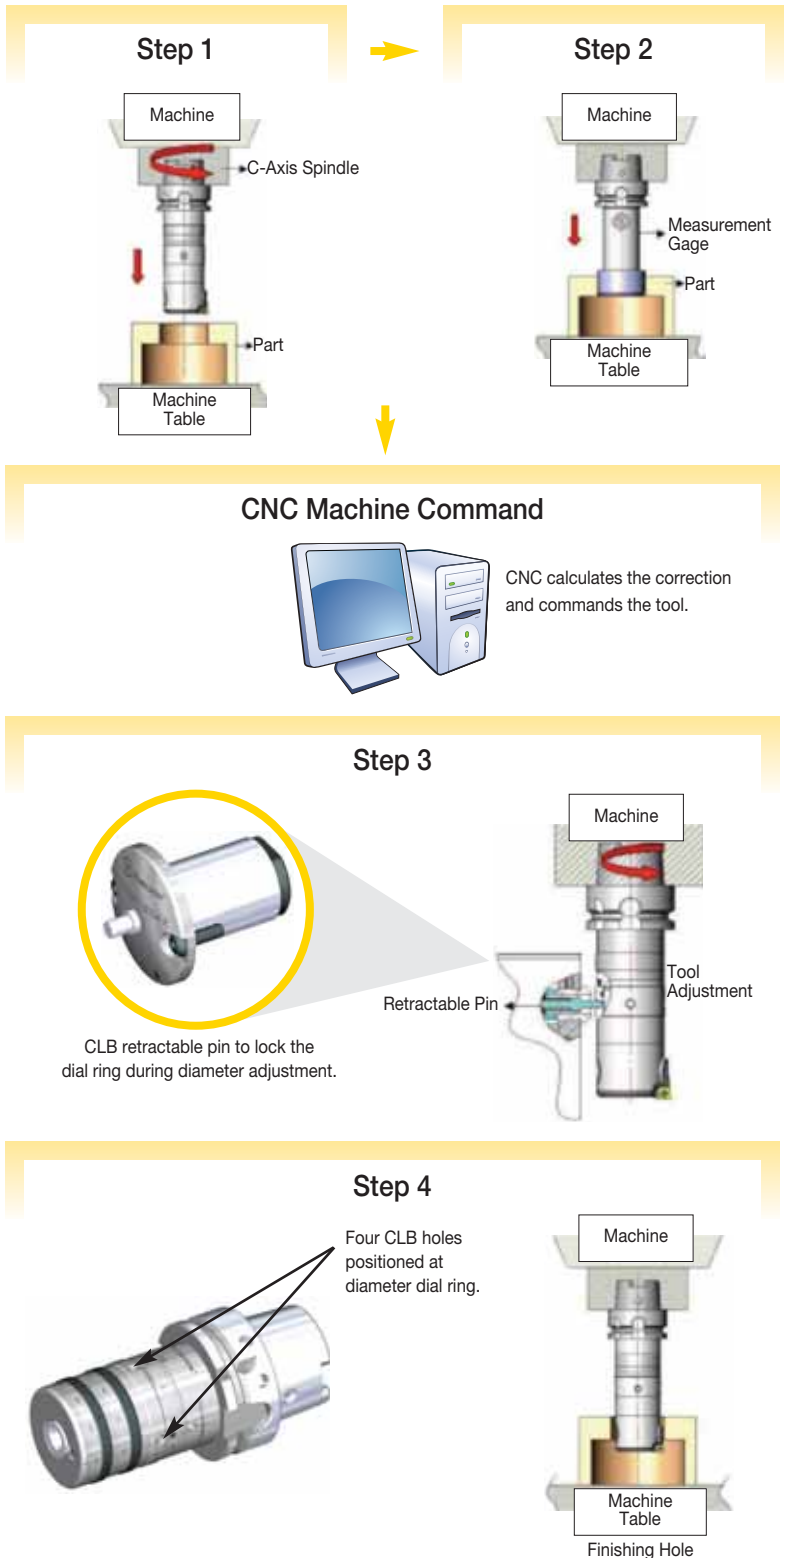

The Romicron Closed Loop Boring Process

Closed Loop Boring (CLB) provides the unique possibility to automate the insert wear compensation with minimal investment due to the precise 2 µm adjustment in diameter of these tools per increment. Retrofit existing machines to automated wear compensation using the standard CLB pin without any electronic equipment needed besides a measuring device of holes produced.

NOTE: This process is only possible with the Romicron system because it does not require tools to make the adjustment.

1. A precision system measures the holes after the machine process. The data is sent to the CNC.
2. The values are compared to the set points.
3. If the diameter is in the range of the specified set points, the machine goes to the next hole. Otherwise, the software calculates the necessary increment and automatically adjusts the Romicron using the CLB pin.

Hole Finishing

Hole Finishing

Romicron Assembly Instructions

The required parts for the adaptor assembly are identified on Figures 1 and 2. The SVS model is shown. The instructions are also valid to the SVU and SVUBB models.

Figure 1 – Parts to be assembled

1	Boring head
2	Taper shank
3	Square extension (3/8" or 1/2")
4	Torque wrench
5	Differential connector
6	Positioning pin
7	Lubricant ASL-3G

WARNING:
Before starting the assembly procedure, ensure that all surfaces to be assembled together are free of dirt and completely clean.

Figure 2 – Assembled Tool

A. Remove the Differential Connector (5) from the Taper Shank (2).

B. Lubricate the thread on the Differential Connector (5) with Lubricant ASL-3G (7), supplied with the Taper Shank (2).

C. Screw the Differential Connector (5) into the rear thread on the Boring Head (1) until the end of the thread. At this time it is not necessary to tighten the Differential Connector (5). Remember that the Differential Connector (5) has two different screws, so there is no way to assemble the wrong side.

Romicron Assembly Instructions

D. Screw the front end of the Taper Shank (2) onto the Differential Connector (5), now located at the back on the Boring Head (1). Screw carefully until the Positioning Pin (6) gently touches the Taper (2) face. Stop!

F. Insert the square end of the Extension (3) through the Taper Shank (2) and into the Differential Connector (5). Keeping the Positioning Pin (6) and the positioning slot aligned, turn the Extensions (3) counter-clockwise until you see that two Romicron faces are meshing. Ensure that the Positioning Pin (6) is inserted into the slot on the Taper Shank (2).

E. Unscrew the Taper Shank (2) a little bit until the Positioning Pin (6) is aligned with the positioning slot mark in the Taper Shank (2) face.

G. Tighten the Differential Connector (5) with the specified required torque, as shown on the table below. Use the Torque Wrench (4) to do this.

Tightening Torque Specifications

joint size	Torque		drive square
	in. lbs.	Nm	
KR32	262	30	3/8"
KR50	350	40	3/8"
KR63	481	55	1/2"
KR80	569	65	1/2"

Following these procedures will result in a rigid surface contact between the taper and the boring head face.

1. The balancing dials are identified on the figure below.

2. Ensure that the zero mark of dial 02 is coincident with Romicon Body Mark, and the zero mark dial 01 is coincident with the zero mark on dial 02.

3. Read the position values of the dials 01 and 02 on the table. For example, to machine a 10mm diameter, the positions are 01 = 17,5L and 20,0L.

(continued)

(Balancing Table • SVU-BB1 Boring Head continued)

4. The dial 01 must be positioned first. Moving the dial, adjust the position of dial 01. Use the mark reference located on dial 02. The dial resolution is 2 units of table values.

5. Now adjust the position for dial 02. Use the mark reference located on the Romicron body. After the adjustment of dial 02, the Romicron is correctly balanced.

(Balancing Table • SVU-BB2 Boring Head continued)

4. The dial O1 must be positioned first. Moving the dial, adjust the position of dial O1. Use the mark reference located on dial O2. The dial resolution is 2,5 units of table values.

5. Now adjust the position for dial O2. Use the mark reference located on the Romicron body. After the adjustment of dial O2, the Romicron is correctly balanced.

■ **Balancing Table • SVU-65 Boring Head**

1. The balancing dial 01 is identified on the figure below. The dial resolution is 2,5 units of table values.

2. Read the position value of the dial 01 on the table. For example, to machine a 76mm diameter, the position is 01 = 30R.

3. By moving dial 01, adjust its position, observing its proper reference mark, according to the read value.

Hole Finishing

The **EDGE** to **PERFORM**

Multicron Fine-Boring Tooling

Multiple edges allow respective increase of feed rate to increase productivity and metal removal rate (MRR).

- Engineered solutions are available starting at diameter 3.07" (78mm) with two independent adjustable Romicon™ edges.
- Combination of semi-finishing and finishing cutting operations in one tool are also possible.
- Romicon edges can be set up independently and adjusted to compensate for insert wear with one central dial to enable CLB as well.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

 **KENNAMETAL®**

ModBORE™

One system from highly flexible roughing and fine-boring heads to large bridge tooling with optimum amount of tooling components.

Primary Application

This premium boring line enables rough to fine-boring operations using one system with a large diameter range from .384–86.8" (9,75–2.205mm). ModBORE can be used in most materials commonly found in the metalcutting environment by applying the latest technology in Kennametal Standard ISO Turning Inserts.

Features and Benefits

Complete System

- Twin blade heads for roughing to semi-finishing operations starting from diameter .925" (23,5mm).
- Fine-boring heads for finishing for diameters .384–86.8" (9,75–2.205mm).
- Bridge tooling for large diameters up to .86.8" (2.205mm) standard with both roughing and fine-finishing heads.
- Through-coolant capability in all series.

Resolution

- Fine adjustable roughing heads.
- .0004" (0,01mm) diameter adjustment respective .00008" (2 µm) with easy-to-read large vernier scale with fine-boring heads.

Product Variety

- KM™ shanks for adaptation to all spindles via respective adapters.
- HSK shanks for direct adaptation.
- Inch shanks as most economic variant for adaptation via respective adapters.

Customization

- Engineered solutions available.
- Anti-chatter devices available.
- Cartridges can be designed into standard boring heads for added versatility.

ModBORE™ Fine-Boring System

Based on KM™, HSK, and inch SSF couplings, match all spindle specifications direct or indirect via adapters. The ModBORE Fine-Boring System utilizes standard ISO/ANSI turning inserts for maximum performance and flexibility.

RBHT • Twin Cutters for Rough and Semi-Finish Boring

- Diameters .925–6.024" (23,5–153mm).
- KM, HSK, and inch straight shank back end versions available.
- Special preloaded serration and ground support face ensures very stable connection, minimizes cutting vibration, and maximizes position accuracy while enabling easy diameter adjustment.
- Large selection of blades sets:
 - Staggered — efficient machining of large depths of cut.
 - 70° — for challenging applications requiring stable corner radii and full utilization of inserts.
 - 90° — most precise machining results.
- Generous clearance and through coolant enables free chip flow and improves tool life.
- All insert holders allow positive standard turning inserts for lowest cutting forces. Starting with diameter 2.58" (65,5mm) additional insert holders for negative standard turning inserts enable even higher feed rates for maximum metal removal rates.

FBHO • Offset Boring Bar Heads for Fine Finish

- Diameters .384–3.46" (9,75–88,1mm).
- KM, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of .00008" (2 μm) via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars can be adjusted in length by pushing them deep into the body for maximum stability.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHM • Offset Boring Bar and Cartridge Heads for Fine Finish

- Diameters .384–12.59" (9,75–320mm).
- KM-TS, HSK, CV, DV, and BT steep taper back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of .00008" (2 μ m) via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Standard steel and carbide boring bars adjust in length by pushing them deep into the body for maximum stability.
- Aluminum diameter extender with insert cartridges and counterweight are used for diameters starting at 3.38" (86mm) for maximum flexibility.
- Through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

FBHS • Cartridge Boring Heads for Fine Finish

- Diameters .925–6.024" (23,5–153mm).
- KM™, HSK, and inch straight shank back end versions available.
- Use of a precision-ground micrometric screw enables fine adjustment of .00008" (2 μ m) via vernier scale. The large, TiN-coated dial is easy to adjust and easy to read. The force- and form-fixed adjustment mechanism is almost free of any backlash and play.
- Large selection of insert holders:
 - 95° — for use of Wiper turning inserts.
 - 90° regular diameter — for most efficient machining of large depths of cut.
 - 90° oversized diameter — for enhanced use of boring head diameter capabilities.
- Generous clearance and through coolant directed to the cutting edge improves tool life, surface finish, and chip evacuation.

BT • Bridge Tools for Rough and Finish Boring

- Diameters 5.91–86.81" (150–2.205mm).
- Highly sophisticated ground serration between consoles/slides and heads as well as T-style bolt clamping provides highest cutting force transmission capabilities, sensitive adjustment, and avoids diameter changes when heads are clamped.
- Only 10 bridge consoles are needed for diameters up to 25.7" (655mm).
- KM, HSK, and various steep taper adapters with console corresponding ground serration are available as standard. Through coolant to the cutting edge improves tool life and surface finish.
- Diameters 25.5–86.81" (650–2.205mm) are covered with only three aluminum-based consoles and two sets of steel slides for mounting rough and finish boring heads for direct spindle of shell mill adapter clamping.
- 90° roughing head sets ensure precise height alignment and, by use of negative standard turning inserts, highest metal removal rates.
- New counterweight for better dynamic balancing supplements the fine-boring head with precision-ground micrometric screw enabling fine adjustment of .00008" (2 μ m) via vernier scale.

Beyond™ High-Performance Solid Carbide Taps

Beyond™ Primary Application

Solid carbide taps offer higher productivity and outstanding performance in a wider range of materials than formerly possible. Get more production from a single tool and superior accuracy of product thread that surpasses the competition. Kennametal High-Performance Solid Carbide Taps are available in various specifications with enhanced precision and design, which translates into longer tool life, excellent performance, and exceptional wear resistance.

- High performance to surpass competitive taps.
- More production from a single tool.
- Available in various specifications.

Features and Benefits

Advanced Technology

- Manufactured with micrograin carbide for exceptional wear life.
- Ideal for long production runs where fewer tool changes equate to greater productivity.
- Designed for outstanding tool life in steel, cast iron, aluminum, and hardened materials.
- Runs 4x faster and lasts 4x longer than conventional taps.
- Tap runout less than 10 microns (.0004").
- PVD nanolayer TiAlN/TiN coated carbide grade.

Customization

- Engineered solutions available upon request.
- Available in various specifications.

Application Information

- Maximum chip control and free cutting in through holes.
- For use on CNC machines with synchronous or rigid tapping control and precision toolholders.
- Straight-flute taps for sizes M4 and larger for ductile or cast iron.
- Can be factory reconditioned to original specifications and tolerances.

Optimized flute design
Better chip evacuation.

Carbide substrate
Higher heat resistance,
higher speed.

Chamfer design
Helps chip load,
lower torque.

Application-specific coatings
Extremely high wear resistance,
longer tool life.

Cylindrical h6 shank
Low runout, higher
quality threads.

Taps

The **SPEED** to **EXCEED**

Solid Carbide Taps

The Kennametal Solid Carbide Taps deliver the accuracy you demand at up to four times the speed of HSS taps. Longer tool life, exceptional thread quality, and an array of sizes for ferrous and non-ferrous materials make our taps the most trusted and productive tools in the industry.

- Reduce your operating costs by up to 65%.
- Workpiece-specific grades: KC7542™ for steels and cast irons, KC7512™ for aluminum.
- Go 4x faster with 4x the service life of conventional HSS offerings.
- Wide array of styles and sizes for through or blind hole applications.

Tap into something great at your Authorized Kennametal Distributor or at www.kennametal.com.

Taps

Grade	Coating	Grade Description	Material Hardness (HRC)												
			05	10	15	20	25	30	35	40	45				
KC7542		Coated carbide. PVD — multilayer coating with TiAlN and TiN over a high-strength carbide substrate specifically designed for tap application. Use in steel up to 32 HRC and cast iron at four times faster speeds than HSS-E-PM taps.	P												
			K												
KC7512		Coated carbide. PVD — two-layer coating over fine-grain carbide. Coating consists of low friction Cr/C over wear-resistant TiN. Cr/C resists galling of non-ferrous materials to the tap. Provides superior performance for tapping cast aluminum and other non-ferrous materials.	N												
KCU36		Coated carbide. PVD — two-layer coating with heat-resistant TiAlN base layer and low-friction MoS ₂ top layer over carbide substrate. Use in hardened steel 55–63 HRC.	H												
KP6525		Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate coated with wear-resistant TiCN base layer and low-friction TiN top layer. Use in steel, cast iron, and cast aluminum with silicon.	K												
KSP21		Coated HSS-E-PM. PVD — powder metal HSS-E substrate with TiN coating. Use for tapping steel 32–44 HRC and for forming threads in steel 32 HRC.	P												
KSH26		Coated HSS-E-PM. PVD — powder metal HSS-E substrate coated with TiN base layer and low-friction MoS ₂ top layer. Use in deep blind steel holes 32–44 HRC.	P												
KM6515		Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate. Coating consists of low-friction Cr/C over wear-resistant TiN base layer. Use for tapping stainless steel and non-ferrous materials.	M												
			N												
KSN28		Coated HSS-E-PM. PVD — powder metal HSS-E substrate with DLC coating. Use for form tapping aluminum. Not recommended for steel.	N												
KSN38		Coated HSS-E. PVD — Lower vanadium HSS-E substrate with DLC coating. Use for tapping non-ferrous materials with low cutting temperatures like wrought aluminum. Not recommended for steel.	N												
KSN25		Coated HSS-E-PM. PVD — powder metal HSS-E substrate with two-layer coating: TiN base layer and DLC top layer that resists galling of non-ferrous materials to the tap. Use for tapping titanium. Not recommended for steel.	S												
KSSH22		Coated HSS-E-PM. PVD — heat- and wear-resistant high vanadium — cobalt powder metal HSS substrate with high hardness TiCN coating. Use when tapping heat-treated steel 44–55 HRC and cobalt- or nickel-based heat-resistant alloys.	S												
			H

High-Performance HSS-E-PM Taps

Primary Application

The High-Performance High-Speed Steel (HSS-E-PM) Taps are manufactured to both ANSI and DIN standards from powder metal, offering high productivity and reliable thread quality and are engineered for greater wear and heat resistance. HSS-E-PM tools can be used on conventional non-rigid and CNC-synchronous tapping machines for tapping through and blind holes in a variety of materials and is particularly efficient in tapping soft steel and aluminum.

The precision h6 shank enables usage in either conventional square drive tap holders or in precision round toolholders.

Features and Benefits

Improved Performance, Wide Range of Choices

- Higher strength and wider range of applications versus carbide taps.
- Higher tapping speed capability and longer life than conventional HSS-E taps.
- Can be used on either conventional or synchronous tapping machines.
- Forming taps for soft steel and aluminum.
- Selection of taps for all materials:
 - Steel
 - Stainless steel
 - Iron
 - Aluminum, cast and wrought
 - Aerospace
 - Hard steel

Customization

- Customized taps are available with short lead times from semi-finished blanks.

Type of Thread

Nominal Diameter of Thread

-

Pitch

Cutting Direction

Tolerance Class

Taps Dimension

mm or inch (depending on type)

mm or TPI (depending on type)

M = Metric coarse-pitch thread (ISO form)

MF = Metric fine-pitch thread (ISO form)

NC = Unified coarse series thread

NF = Unified fine series thread

A = ANSI

D1 = DIN 371

D4 = DIN 374

D6 = DIN 376

D74 = DIN 3174

J = JIS

XL = DIN extra length

Style

T620 = Steel and stainless steel, through holes, LH spiral flute, solid

T621 = Steel and stainless steel, through holes, LH spiral flute, coolant

T630 = Steel and stainless steel, blind holes, RH spiral flute, solid

T631 = Steel and stainless steel, blind holes, RH spiral flute, coolant

T640 = Cast iron, through and blind holes, straight flute, solid

T641 = Cast iron, through and blind holes, straight flute, coolant

NOTE: Other taps styles, see pages L38–L39.

The Kennametal Solution

Kennametal Global Engineered Solutions. Coordinated global resources with world-class manufacturing, process development, and implementation capabilities.

No matter how small or large your project.

- Whether it's a single tailored tool or the development of a comprehensive manufacturing process, Kennametal's team can manage the development, personnel training, and successful implementation of the complete solution.

Regardless of where you're located, Kennametal is everywhere you are.

- With Kennametal's team, you receive globally coordinated manufacturing, process development, implementation, and optimization support and key alliances with machine tool builders and other leading technology manufacturers that ensure a complete solution.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

Wind Energy Taps

Primary Application

The new high-performance, large-sized HSS-E-PM Wind Taps were developed for manufacturers of some of the most important wind turbine components to increase productivity because of increased demand and can be used in conventional non-rigid and CNC-synchronous tapping machines. These Wind Taps are manufactured to DIN 376 dimensions and an extra-long version is available to reach the longer overhang that is common on these big components.

The precision h6 shanks enable use in either conventional tap holders with square drive or in precision round holders.

Features and Benefits

T620 LH Spiral Flute

- For through hole tapping.
- Push chips ahead, enabling free tapping on long chipping material.
- Form D plug chamfer.
- DIN 376 and extra-long versions available.

T630 RH Spiral Flute

- For blind hole tapping.
- Preferred for vertical tapping application.
- Form D plug chamfer.
- Internal coolant available as standard; see T631.
- DIN 376 and extra-long versions available.

T650 RH Spiral Flute

- For blind hole tapping.
- Preferred for horizontal tapping application.
- Form D plug chamfer.
- Internal coolant available as standard; see T651.
- DIN 376 and extra-long versions available.

T650 HSS-E-PM • Proven Solution

Case study:

- Manufacturer of large diameter bearing for wind turbines.

Conditions:

- Thread size: M24 x 2.5 6H
- Workpiece: bearing ring
- Material: low-carbon steel 1010 (C10)
- Thread depth: 35mm blind
- Tap drill size: 17,5mm
- Machine: CNC
- Coolant: water soluble

High-Performance K Series Taps

Our family of K Series taps are specially designed to thread a broad assortment of materials for unrivaled high-performance tapping. The K Series taps are designed and manufactured to successfully thread high- and low-volume applications in aluminum, stainless steel, nickel alloys, titanium alloys, mold steels, irons, brass, bronze, and plastics. The formulation of premium steel tap base material is unique for every application. The combination of a special geometry, tap surface treatment, and premium steel gives these taps the highest level of performance.

Features and Benefits

Unmatched Performance

- Enhanced tool geometry.
- Less tapping torque.
- Better chip removal.

Premium Steels

- Special HSS-E compositions containing chromium, tungsten, molybdenum, vanadium, and cobalt, depending on the application.
- Improved tap performance resulting in improved product finish and pitch diameter size.
- Excellent heat and abrasion resistance.
- Maintains the same quality from the first hole to the very last.

Broad Offering of Diameter Limits

- Pitch diameters from H2–H7 and metric pitch diameters from D3–D7 are stocked as standards in many styles, at no premium in price.
- Rigid setups enable higher pitch diameter limits.
- Offers many size options to produce the class of thread desired.

NOTE: Metric taps for 6H class of fit are suitable for MJ aerospace internal threading applications.
Metric taps are manufactured to USCT1 specifications and dimensions.
Metric tap blank dimensions are equivalent to inch taps.
Refer to table on page L292 for the recommended pitch diameter limit for 6H class of fit.

NOTE: Metric taps for 6H class of fit are suitable for MJ aerospace internal threading applications.
Metric taps are manufactured to USCTI specifications and dimensions.
Metric tap blank dimensions are equivalent to inch taps.
Refer to table on page L292 for the recommended pitch diameter limit for 6H class of fit.

NOTE: K-SS taps for 3B class of fit are suitable for UNJ aerospace internal threading applications. Refer to table on pages L291–L292 for the recommended pitch diameter limit for 2B or 3B class of fit.

- Ground thread pipe taps are standard in American Standard Pipe Thread (NPT) and American Standard Dryseal Pipe Thread (NPTF).
- NPT threads require the use of a sealer such as Teflon® tape or pipe compound.
- NPTF dryseal threads give a pressure-tight joint without the use of sealer.
- Standard projection.
- Unique, slow, spiral-tap geometry for improved thread finish when tapping stainless steels.

NOTE: Metric taps for 6H class of fit are suitable for MJ aerospace internal threading applications.
 Metric taps are manufactured to USCTI specifications and dimensions.
 Metric tap blank dimensions are equivalent to inch taps.
 Refer to table on page L292 for the recommended pitch diameter limit for 6H class of fit.

General-Purpose Taps

Production Taps

Kennametal offers an extensive line of thread-cutting and thread-forming taps for any industrial application, manufactured using the highest quality materials and workmanship since 1872.

Alternate Coatings

Kennametal's in-house tool coating capabilities lead the industry! Choose from a wide range of sizes, tap limits, chamfers, and styles for through and blind holes.

New Additions to the General Purpose Line

New T920 Series Spiral-Point Taps

- The new T920 series spiral point taps have an optimized flute design for lower tapping torque and improved neck design for more efficient coolant flow.
- Higher quality thread and tool life.
- Enhanced performance with tool life at least 35% better than current Spiral Point taps.
- Uncoated, TiCN, and TiN+CrC/C coatings available for tapping a broad range of materials.

New KHSST Forming Taps

- The next generation of forming taps.
- Made from vanadium high-speed steel for extending wear life and better part finish.
- New tap lobe design improves thread forming in ductile steels and non-ferrous materials for better tool life.
- Necked design with short thread length for tapping at reduced torque levels.
- Plug and bottoming chamfers for form tapping without troublesome chips that clog and break taps.
- Performance-enhancing surface treatment available as stock standards with alternate coatings available as stocks modifications.

Quick Ship Services

Rely on the Kennametal Quick Ship Services to deliver the special taps you need, when and where you need them. Within minutes, we can quote, process, and release your order to the factory.

- Non-standard tap sizes, pitches, PDs, coatings, etc.
- Special taps can be used for tapping steel, cast iron, aluminum or brass.
- Custom ordered taps can be designed to thread INCONEL®, titanium, and high-temp alloys.
- Always accurate thread pitch diameters and gage fits.

Let our Kennametal Quick Ship Services spark your production. Contact your Authorized Kennametal Distributor or at www.kennametal.com.

NOTE: KHSST taps for 3B class of fit are suitable for UNJ aerospace internal threading applications. Refer to table on pages L291-L292 for the recommended pitch diameter limit for 2B or 3B class of fit.

- Manufactured from select high-speed steel.
- Ground thread pipe taps are standard in American Standard Pipe Form (NPT) and American Standard Dryseal Thread Form (NPTF).
- NPT threads require the use of a sealer, such as Teflon® tape or pipe compound.
- NPTF dryseal threads give a pressure-tight joint without the use of sealer.
- The nominal size of a pipe tap is that of the pipe fitting to be tapped, not the actual size of the tap; thread taper is 3/4" per foot.
- Alternate tap coatings are available as stock modifications.

* Pipe tap projection is the distance the small end of the tap projects through an American National Standard Pipe Tap Thread Ring Gage.
NOTE: NPT taps may be used for ANPT applications.

- Manufactured from select tap high-speed steel.
- Ground thread pipe taps are standard in American National Standard Straight Pipe (NPS) thread form and American National Standard Dryseal Straight Pipe (NPSF) thread form.
- NPS threads are suitable for tapping holes or couplings for low pressure work when used with a sealer; also suitable for NPSC and NPSM work.
- NPSF dryseal taps are intended for low pressure work such as fuel and oil lines where a sealer is not used.
- Dryseal threads give a low-pressure, pressure-tight joint without the use of sealer.

High-Performance Solid Carbide Thread Mills

Primary Application

Our solid thread mills are designed to deliver high-quality internal threading on 3-axis CNC machines. Because these mills are made of carbide, they are capable of easily cutting most difficult materials up to 63 HRC. Thread mills make interrupted cuts and short chips.

The combination of these design elements offers a range of benefits to improve overall thread quality and tool production. Short, easily evacuated chips generate less heat and friction, so there is a lower risk of damage to threading. Also, the superior carbide grades make threading easier and machining times shorter.

Features and Benefits

System Requirements

- 3-axis CNC machine.
- Good clamping for tool and workpiece.
- Internal coolant supply.

Features

- Interrupted cuts.
- Short chips.
- Optimized carbide grades.
- Drill, thread, countersink.

Advantages

- Versatile.
- Better surface quality.
- No chip problems.
- No need to reverse the spindle.
- More production safety.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit www.kennametal.com/carbiderecycling.

NOTE: For thread depths over 2 x D up to 3 x D, reduce speed and feed by 25%.

Milling Methods

Climb Milling

Properties:

Tool rotation direction clockwise

Tool moves counter-clockwise

Pitch "upwards"

Right-hand thread

Climb milling is always when the cutting edge goes out of the material with a chip thickness $h = 0$

Conventional Milling

Properties:

Tool rotation direction clockwise

Tool moves clockwise

Pitch "downwards"

Right-hand thread

Conventional milling is always when the cutting edge goes out of the material with a chip thickness $h = \max$

Counter Feed F_k

$$F_k = n \cdot f_z \cdot Z \text{ [mm/min]}$$

Center Point Feed F_m

$$F_m = \frac{F_k \cdot (D - D_w)}{D} \text{ [mm/min]}$$

D_w = Tool diameter [mm]

n = RPM [min^{-1}]

f_z = Feed per tooth [mm]

Z = Number of teeth on tool (radial)

D = Nominal diameter of thread = Diameter of external contour [mm]

D_m = Diameter of the center point ($D - D_w$) [mm]

Taps

Drill Thread Mill TM741 • Right Hand

Preparation None

Process Principle Milling thread and core hole, countersinking (conventional milling)

Taps

Example

Retracting tool to positioning level	N 70	G 90	G 00	Z 2						

Cutting time t_p 51.6 seconds

NOTES:

- ¹ The cutter radius measured over the tooth crests of the threaded part must be reduced by the amount of the cutter radius compensation. This is necessary to achieve a depth of cut to the middle of the 6H/ISO2 nut tolerance. Please note, however, that this also depends on the radial deflection of the tool (tensile strength of the material, projecting length of the tool).
- ² The cutter radius to be programmed is normally included in the tool memory.
- ³ The thread depth b must be divisible by the thread pitch P.
- ⁴ The feed values in brackets must be used for controllers, which do not calculate the center point feed themselves.
- ⁵ **Set N40 must be repeated with the number of threads.** Repetitions N = thread depth b/pitch P (rounded up to the nearest integer).

Run-out loop in arc	N 80	G 02	X 9.25	Y 0.000	Z-0.750	I 4.625	J 0			
Exit	N 90	G 40	G 01	X-4.25						
Retracting tool to positioning level	N 100	G 90	G 00	Z 2						

Cutting time t_h 1.4 seconds

NOTES:
¹ The cutter radius measured over the tooth crests of the threaded part must be reduced by the amount of the cutter radius compensation. This is necessary to achieve a depth of cut to the middle of the 6H/ISO2 nut tolerance. Please note, however, that this also depends on the radial deflection of the tool (tensile strength of the material, projecting length of the tool).
² The cutter radius to be programmed is normally included in the tool memory.
³ The feed values in brackets must be used for controllers, which do not calculate the center point feed themselves.

Quick Ship

Rely on the Kennametal Quick Ship Services to deliver the special taps you need, when and where you need them. Within minutes, we can quote, process, and release your order to the factory.

Features and Benefits

- Non-standard tap sizes, pitches, PDs, coatings, etc.
- Special taps can be used for tapping steel, cast iron, aluminum or brass.
- Custom ordered taps can be designed to thread INCONEL[®], titanium, and high-temp alloys.
- Always accurate thread pitch diameters and gage fits.
- Select products available for shipping within 24 hours.

How to Order Special Taps

Kennametal leads the industry in quoting technology. Experienced quotation specialists and product engineers use in-house designed software to generate a quote from a customer inquiry and design cutting tools with the requested features, modifications, options, and surface treatments. We are tool coating specialists.

Use the following outline when selecting a tap:

1. Determine the tap that will fulfill your cutting tool needs. For assistance, consult the Tap Selection Manual.
2. Consult the new Kennametal Innovations Master catalog, and check the Quick Ship section.
3. The Quick Ship section is organized in two sections: Common Special Taps and Special Taps from Blanks. Common Specials are manufactured from in-stock blanks and should be considered first. These items can be ordered by simply referencing a catalog number. For those items not listed in Common Specials, consult the Special Taps from Blanks section for availability.
4. If the style, size, and/or quantity is not listed, consult customer service for a factory quote. Kennametal is fully equipped and ready to design your tool to your unique specifications.

Please use the following guidelines when placing an order:

1. Tap style and required quantity.
2. Catalog number, if available.
3. Size and pitch (nominal diameter and threads per inch or mm pitch).
4. Number of flutes (if spiral flute state right or left hand and helix angle desired).
5. Chamfer (taper, plug, modified bottoming, or bottoming).
6. Surface treatments.
7. Right or left hand (we will assume right hand).
8. Additional features or options.

NOTE: If you do not specify the pitch, number of flutes, and/or chamfer, standard specifications will be applied and shipped uncoated.

Any additional information, such as material to be tapped, type of hole, and any general dimensions, such as overall length and shank diameter, will ensure a correct tap for your application.

Taps

Delivery Matrix

Common Special Taps and Special Taps from Blanks

sizes	max quantity	lead time
up to 13/16", M20	72 pcs.	24 hours
7/8–1", M22–M25	24 pcs.	24 hours
1 1/16–2", M27–M48	12 pcs.	24 hours
2 1/8–2 1/2", M56	6 pcs.	24 hours
larger than 2 1/2"	2 pcs.	24 hours
Rp (BSPP), Rc (BSPT), G (BSPF)	47 pcs.	72 hours

NOTE: For orders greater than specified maximum quantity, consult customer service.

Surface Treatments

(Add to lead time designated for special taps)

treatment	lead time	price
TiN — Titanium Nitride	24 hours	consult customer service
Steam Oxide	24 hours	N/C
Nitride	24 hours	N/C
Steam Oxide/Nitride	48 hours	N/C
TiCN — Titanium Carbonitride	1 week	consult customer service
TiAlN — Titanium Aluminum Nitride	2 weeks	consult customer service
CrN — Chromium Nitride	2 weeks	consult customer service
TiN+CrC/C — Titanium Nitride + Chromium Nitride	2 weeks	consult customer service

Additional Features and Options

(Add to lead time designated for special taps)

feature/option	lead time
controlled root (minor diameter $\pm .001$ ")	no additional time
double lead (except form taps)	24 hours
triple lead	24 hours
interrupted threads, taper or straight flute, odd number	24 hours
external centers removed	no additional time
special marking	no additional time
special K-series Taps	5 days
STI Taps	24 hours

Taps

Ships in 24 Hours

NOTE: UNC and UNF taps may be used in UNJC and UNJF applications respectively.
 Refer to table on pages L291–L292 for the recommended pitch diameter limit for 2B or 3B class of fit.
 Quantities above max will be delivered as regular special order.

Taps and Thread Milling Technical Information

The technical information in the following section can be used to assist you with your tapping and thread milling operations. Whether you are simply searching for information about tap dimensions and recommendations, or you're trying to solve basic tapping and thread milling problems, you will find the relevant data here.

This Section Includes the Following Information:

- Illustrations of tap terms.
- Explanations of tap chamfers.
- Dimensional information for various tap styles and lengths.
- Tap limitation data.
- Chip handling methods for different tap styles.
- Tap recommendations.
- Descriptions of screw thread tolerance and tolerance information.
- Information regarding surface treatments and coatings.
- Guidelines and tables for determining tapping speeds.
- Troubleshooting charts.
- Hardness conversion table.
- A guide to Kennametal tapping application icons.
- Taps custom order worksheet.
- Thread Milling application sheet.

This section will further your knowledge of tapping and thread milling operations enabling you to maximize the value of your tools.

How to Apply This Technical Information

Below is an example of where the technical information in this catalog can be useful:

Problem

- Thread holes are oversized and taps are experiencing low life when working with stainless steel materials.

Solution

- Consult the troubleshooting portion of the Technical Information section to discover ways to correct the issue.

Definitions and Angles, Centers and Flute Forms

Taps

Flute Forms

Straight-flute, form C plug chamfer without spiral point

Right-hand spiral flute

Straight-flute, form B plug chamfer with spiral point

Left-hand spiral flute

Types of Centers (Standard to DIN 2197/DIN 2175)

Coolant Hole Types

Axial coolant delivery with axial coolant exit hole

Axial coolant delivery with radial coolant hole exiting in the flutes

Concentric

Eccentric Relief

Con-Eccentric Relief

Negative Hook

0° Hook

Positive Hook

Negative Rake

Radial Rake

Positive Rake

Taps

■ Tap Chamfers • ANSI Taps

Taper (7–10 pitches)
The taper chamfer has the longest standard chamfer ensuring easier starting. It provides the longest life because of more working teeth.

Plug (3–5 pitches)
The most common chamfer for use by hand or machine in through. This chamfer is more efficient than a bottoming or modified bottoming chamfer.

Semi-Bottom (2–3 pitches)
This short chamfer enables threading close to the bottom of blind holes. Due to the slightly longer chamfer and more working teeth, this chamfer is more efficient than a bottoming chamfer.

Bottoming (1–2 pitches)
For threading close to the bottom of blind holes, the bottoming chamfer is the least efficient chamfer available.

■ Tap Chamfers • DIN Taps

Form A (6–8 pitches)
The Form A chamfer has the longest standard chamfer ensuring easier starting. It provides the longest life because of more working teeth.

Form B/D (3.5–5 pitches)
The most common chamfers for use by hand or machine in through hole. Form B applies to spiral-point taps, and Form D applies to straight-flute and spiral-flute taps. This chamfer is more efficient than a Form E or Form C chamfers.

Form C (2–3 pitches)
This short chamfer enables threading close to the bottom of blind holes. Due to the slightly longer chamfer and more working teeth, this chamfer is more efficient than a Form E chamfer.

Form E (1.5–2 pitches)
For threading close to the bottom of blind holes, the Form E chamfer is the least efficient chamfer available.

NOTES: Thread length l is based on a length of 12 pitches of the UNC thread series. Thread length l is a minimum value and has no tolerance. When thread length l is added to neck length l1, the total shall be no less than the minimum USCTI Table 302 thread length l. Unless otherwise specified, all tolerances are in accordance with USCTI Table 302. For eccentricity tolerances, see USCTI Table 317. Table 302 is provided for reference only. Kennametal's tap dimensions may differ.

Tolerances

element	nominal diameter range (in)	direction	tolerance (in)
length overall — L	.0520–1.0100	plus or minus	.031
	1.0100–4.0100	plus or minus	.063
length of thread — l	.0520–.2230	plus or minus	.047
	.2230–.5100	plus or minus	.063
	.5100–1.5100	plus or minus	.094
length of square — l2	1.5100–4.0100	plus or minus	.125
	.0520–1.0100	plus or minus	.031
	1.0100–4.0100	plus or minus	.063
diameter of shank — d1	.0520–.2230	minus	.0015
	.2230–.6350	minus	.0015
	.6350–1.0100	minus	.0020
	1.0100–1.5100	minus	.0020

Special Taps

Unless otherwise specified:

Special taps over 1.010–1.510" diameter inclusive, having 14 or more threads per inch or 1.75mm pitch and finer, and sizes over 1.510" diameter with 10 or more threads per inch or 2.5mm pitch and finer, are made to general dimensions shown in USCTI Table 303.

Special tap thread limits are determined using the formulas shown in USCTI Table 331 for Unified Inch Screw Threads and USCTI Table 341 for metric m-profile screw threads.

NOTES: Tap sizes .395" and smaller have an external center on the thread end (may be removed on bottoming taps). Sizes .125" and smaller have an external center on the shank end. Sizes .224–.395" have truncated partial cone centers on the shank end (length of cone approximately 1/4 of diameter of shank). Sizes over .395" have internal centers on both the thread and shank ends.

For standard thread limits and tolerances for Unified Inch Screw Threads, see USCTI Table 327, and for metric threads, see USCTI Table 337.

For eccentricity tolerances of tap elements, see USCTI Table 317.

4	8	.950	.125	.734	.781	.844	-

NOTE: *Distance small end of tap projects through L1 taper thread ring gage.

**Recommended size given permits direct tapping without reaming the hole, but only gives a full thread for approximately the L1 length.

■ Pipe Taps

General-purpose pipe taps are appropriate for threading a wide variety of materials, both ferrous and non-ferrous.

Ground thread pipe taps are standard in American Standard Pipe Form (NPT) and American Standard Dryseal Pipe Form (NPTF). NPT threads require the use of a sealer, like Teflon® tape or pipe compound. Dryseal taps are used to tap fittings which will give a pressure-tight joint without the use of a sealer.

The nominal size of a pipe tap is that of the pipe fitting to be tapped, not the actual size of the tap. The thread tapers 3/4" per foot.

All pipe taps are furnished with 2 1/2–3 1/2 thread chamfer.

Short projection pipe taps are made with a projection shorter than standard for taper pipe tapping where the depth of tapping is limited.

Special short projection taper pipe taps can be furnished with American National Standard Taper Pipe thread (ANPT) or Dryseal American National Standard Taper Pipe thread (NPTF, PTF-SAE Short, or PTF-SPL Extra Short).

For information on short projection pipe taps and hole preparation for NPT, NPTF, and ANPT internal pipe threads, consult Kennametal Technical Bulletins.

Special short projection pipe taps and left-hand pipe taps are available through Lightning Service.

In addition to the nominal size and pitch of a tap, there is another important dimensional factor to be considered when selecting a ground thread tap for a given job. This factor is the pitch diameter tap limit, "H" and "L". "H" represents (high) above basic pitch diameter; "L" (low) is below basic pitch diameter. Tap limits have been established to provide a choice in the selection of the tap size best suited to produce the class of thread desired.

Figure 1 illustrates the numbering system and the .0005" diameter increment separation between successive limits. Because the starting point is basic pitch diameter, dividing the limit number by two establishes, in thousandths of an inch, the amount the maximum tap pitch diameter is above basic in the "H" series and the amount the minimum tap pitch diameter is under basic in the "L" series.

Figure 2 illustrates the positioning of the tap limits in relation to the various classes of threads for a 1/4-20 size.

Figure 1

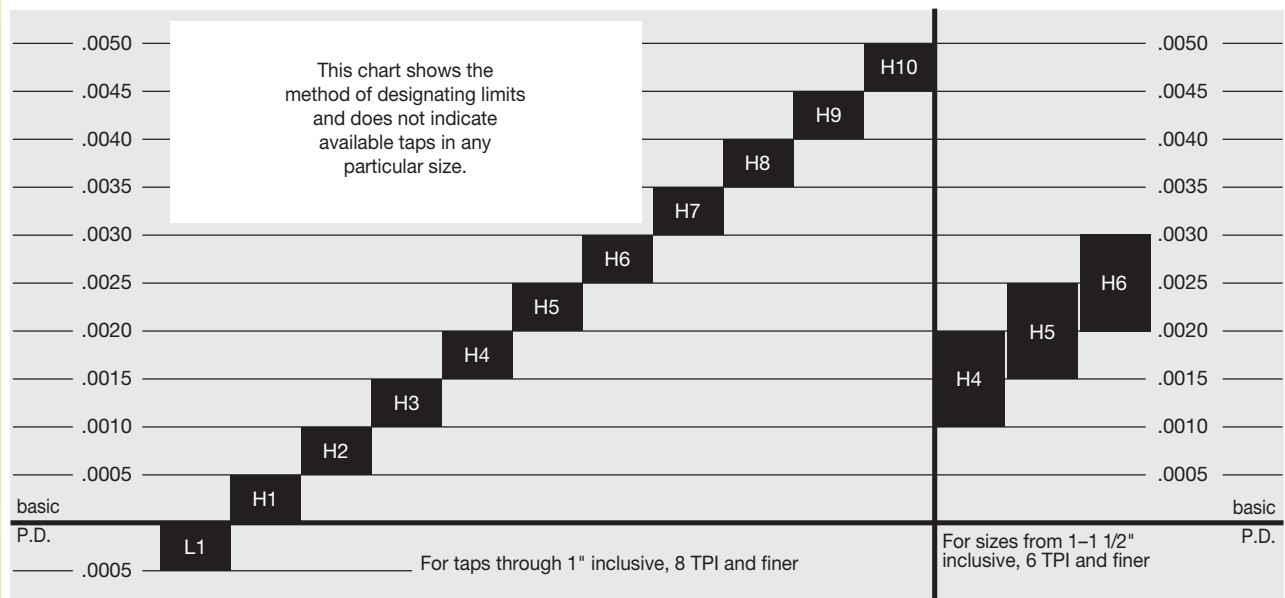

Figure 2

Class of Thread – 1/4-20 UNC and NC

Taps

Internal Unified Thread

For the tap user's convenience, new generation Kennametal taps are sized for the intended class of fit of the internal screw thread. ISO standard 2857 specifies the manufacturing tolerances of the tap pitch diameters for ISO metric threads of tolerances classes 4H to 8H and 4G to 6G.

Examples:
 4H tap corresponds to ISO 1
 6H tap corresponds to ISO 2
 6G tap corresponds to ISO 3

Similarly, ASME B1.1 recommends tap pitch diameter tolerances for 1B, 2B, and 3B classes of fit.

However, it is recognized in many tapping applications that taps should have a pitch diameter that is larger than industry standards. These applications include tapping abrasive materials or CNC applications where machine and tool concentricity is excellent. Taps manufactured to Kennametal standards are designated with an X after the class of fit (example 6HX or 3BX). These graphs illustrate the differences.

Internal Metric Thread

It is generally recognized that, in mass production, it is impossible to reproduce in exact detail the theoretically perfect product as laid out on the drawing board. The allowed slight variation between the theoretically perfect product drawing and each unit of the actual product is called the tolerance.

Allowance

An intentional difference in correlated dimensions of mating parts. It is the minimum clearance or maximum interference between such parts.

Angle of Thread

The angle included between the flanks of the thread measured in an axial plane.

Half Angle of Thread

The angle included between a flank of the thread and the normal (90°) to the axis, measured in an axial plane.

Lead of Thread

The distance a screw thread advances axially in one turn. On a single-thread screw, the lead and pitch are identical. On a double thread, the lead is 2x pitch; on a triple thread, the lead is 3x pitch, etc.

Major Diameter

The largest diameter of a straight-screw thread.

Minor Diameter

The smallest diameter of a straight-screw thread.

Pitch

The distance from a point on a screw thread to a corresponding point on the next thread measured parallel to the axis.

$$\text{The pitch in inches} = \frac{1}{\text{number of threads per inch}}$$

Pitch Diameter

On a straight-screw thread, the diameter of an imaginary cylinder that would pass through the threads at such points as to make equal the width of the threads and the width of the spaces cut by the surface of the cylinder.

Factors when trying to determine the best tapping speeds:

- Material to be tapped
- Length of chamfer on tap
- Percentage of full thread to be cut
- Length of hole (depth of thread)
- Pitch of thread
- Cutting fluids
- Machine equipment
- Horizontal or vertical tapping

The best and most efficient operating speeds for taps cannot be calculated with the same certainty, as for many other metalcutting tools.

With other tools, the feed per revolution can be set at any desired point and can be varied as conditions demand. Taps, on the other hand, must always be advanced at a rate equal to one pitch for every revolution, or one lead in the case of multi-start threads.

The style of tap may vary the conditions. For example, with a bottoming tap, the chamfer cuts a heavy chip while with a taper tap, the chamfer cuts a very thin chip.

The depth of thread also varies, depending on the pitch. The coarser the thread, the greater the advance of the tap per revolution and the greater the amount of material removed.

The method of feeding the tap, and the type of equipment for driving, also influences the permissible speeds. If taps are mechanically fed at the proper rate of advance, they can be operated at higher speeds than if used with flexible tapping holders on machines with poor feed control.

Speeds may be modified to take into account any or all of these factors:

- Speeds must be lowered as length of thread increases because, in deep thread holes, the accumulated chips increase friction and interfere with lubrication.
- Bottoming taps must be run slower than plug taps.
- Tapping full height of thread calls for slower speed than if the commercial 75% height only is required.
- Coarse-thread taps in the larger diameters should be run more slowly than fine-thread taps of the same diameters.
- The quantity and quality of cutting fluid may affect the permissible speeds as much as 100%.
- Taper threaded taps, such as pipe taps, should be operated from 1/2–3/4 the speed of a straight thread tap of comparable major diameter.
- Increase the speed of coolant taps up to 25%.

RPM Formulas

SFM = Surface Feet per Minute

RPM = Revolutions per Minute

IPM = Inches per Minute

TPI = Threads per Inch

S m/min = Surface Meters per Minute

$\Pi = 3.1416$

mm/min = millimeters per minute

P = Pitch (1/number of threads per inch)

Inch Sizes

$$\text{SFM} = \frac{\text{RPM} \times \text{tool diameter}}{3.82} \quad \text{or} \quad 0.26 \times \text{RPM} \times \text{tool diameter}$$

$$\text{RPM} = \frac{3.82 \times \text{SFM}}{\text{tool diameter}}$$

$$\text{IPM} = \frac{\text{RPM}}{\text{TPI}^*} \quad \text{or} \quad *P \times \text{RPM}$$

Metric Sizes

$$\text{S m/min} = \frac{\Pi \times \text{tool diameter} \times \text{RPM}}{1000}$$

$$\text{RPM} = \frac{\text{mm/min} \times 1000}{\Pi \times \text{tool diameter}}$$

$$\text{mm/min} = \text{mm P} \times \text{RPM}$$

Partial List of Solutions to Tapping Problems

application	symptom	common cause	remedy
general	gage out of limits	tap size and gage mismatch	select tap size for gage
	oversize thread	alignment, spindle feed	correct
	oversize at top	runout or alignment	correct
	go gage binds part way	worn tool, tap cuts off lead	replace tap, synchronous holder
	thread shaving	feed error, high axial force	program, synchronous holder
	chipping	high cutting force, worn tap	tap geometry, replace tap
	breakage	chip jamming flutes	tap geometry, tapping depth
	—	worn tool, high torque	replace tap with new tool
	short life, low speed	excessive wear	SC or HSS-E-PM HP taps
steel	birdnest blind hole	long, ductile chips	GT30 GP6505 (oxide), peck feed
	chipping	high material hardness	GT00, GT02 WP31MG (TiN)
	breakage in blind holes	hole depth >2D, chip jamming	GT04 WH36MG (TiN/MoS ₂)
stainless steel	oversize thread, low life	galling	GT20, GT30 GM6515 (TiN-CrC/C)
	short life	work hardened core hole	replace drill
cast iron	excessive wear	abrasion	GT40 GP6520 (TiCN)
aluminum, cast	excessive wear	high silicon	GT40 GP6520 (TiCN)
aluminum, wrought	oversize thread	galling	GT70, GT80 WN48EG (DLC)
nickel, cobalt alloys	short life	high cutting temperature	GT10, GT12 WS32MG (TiCN)
titanium	short life	high cutting temperature	GT14, GT16 WN35MG (TiN-DLC)

Taps

coating	properties and application	precautions
Titanium Nitride (TiN)	Proprietary TiN coating (hardness 2300 Vickers) offers significantly improved wear life and thread finish, often at higher tapping speeds, in a broad range of materials, especially steels, irons, and plastics. Golden color.	Use with caution in non-ferrous materials such as aluminum because of tendency to gall.
Titanium Carbonitride (TiCN)	Proprietary TiCN coating (hardness 3000 Vickers) is harder, tougher, and more wear resistant than TiN under conditions of moderate cutting temperatures. Like TiN, TiCN may be used at higher cutting speeds in a broad range of materials, especially steels and irons. Blue-gray color.	Use with caution in non-ferrous materials such as aluminum because of tendency to gall. TiAlN is a better choice when used at extreme temperatures.
Titanium Nitride + Chromium Carbide Carbon (TiN + CrC/C)	Proprietary coating (hardness 2300 Vickers) that combines the wear resistance of smooth TiN coating with a lubricous top layer of chromium carbide carbon. Effective in stainless steel and non-ferrous materials including aluminum and titanium. Ideal choice for 300 series stainless steels, wrought, and die cast aluminums. Black/gray color.	Effective in both ferrous and non-ferrous materials.
Titanium Aluminum Nitride (TiAlN)	Nanolayer TiAlN coating (hardness 3300 Vickers) offers improved wear life and thread finish, especially in conditions where high temperatures can be generated. Use for PH stainless steels and nickel-based alloys like INCONEL®. Violet/gray color.	Use with caution in non-ferrous materials because of tendency to gall.
Chromium Nitride (CrN)	CrN is medium hard (hardness 1800 Vickers) and has a lower wear resistance than TiN, TiCN, and TiAlN. However, unlike these coatings, CrN does not gall when used in some non-ferrous work materials. Use for brass, bronze, zinc alloys, and magnesium alloys. Silver color.	Ineffective in ferrous materials.
Nitride	Hardened case extends wear life in abrasive materials. Use for aluminum and other non-ferrous materials.	Avoid on taper pipe, fast spiral, and small diameter (<#6) or fine pitch taps due to tendency for thread chipping.
Oxide	Helps prevent galling in ferrous (iron-based) materials. For free machining steel. Use for steels, stainless steels, and irons.	Has a tendency to cause galling in non-ferrous materials such as aluminum.
Nitride and Oxide	Combines the benefits of nitride and oxide surface treatments. For steels, stainless steels, and nickel alloys.	See precautions for nitride and oxide surface treatments.

Tap Custom-Order Worksheet

Use this Custom-Order Worksheet to modify an existing product to meet your specifications. If your custom requirements do not fall into these categories, simply contact your Kennametal Distributor.

Trust our experienced distributors and Kennametal engineering team to design the best solution for you.

1. Start with the standard product most similar to your specifications:

catalog number

grade/coating

2. Type of tap needed:

- solid carbide high performance HSS general purpose spiral point
 hand forming spiral flute
 _____ pipe (and style) _____ other

3. Direction of cut (circle one):

left hand

right hand

4. Material overview:

- ANSI DIN JIS other

5. Desired dimension:

6. Choose one:

through hole:

hole diameter _____
hole depth _____

blind hole:

hole diameter _____
hole depth _____

7. Chamfer:

- taper: 7-10 pitch plug: 3-5 pitch semi-bottom: 2-3 pitch bottom: 1-2 pitch

8. Class of fit:

H limit

metric D limit

diameter pitch limit

9. Workpiece material:

10. Hardness:

11. Number of taps required:

12. Price

Contact your Authorized Kennametal Distributor partners.

13. Other comments or special characteristics:

customer company name

date

address

phone number

city, state, zip

fax number

Drill hole ø: mm

Depth of drill hole: mm

Type of drilled hole: Drilled No hole

Material:

Hardness:

Machine Data

Manufacturer:

Description:

CNC-machine type: Turning machine Milling machine

Working direction: Horizontal Vertical

Control type: DIN Heidenhain

Coolant: Emulsion MQL
 Compressed air Dry

Coolant supply type: Internal External

Coolant pressure: Bar

Revolutions max: 1/min

Spindle power: kW

Clamping device: Weldon® Collet
 Shrinking Hydraulic expansion

Cutting Conditions

Cutting speed v_c : m/min Revolutions: 1/min

Feed f_z : mm/tooth Programmed feed: mm/min

Milling direction: Climb milling Down milling Type of feed: Feed on contour Feed on center

Allocated cut over depth of thread: Yes No Allocated cut over profile: By depth of profile By thread depth

Number of cuts: Number of cuts:

Knowing the hardness of the work material to be tapped is essential in selecting the best tap for the job.

More than just the right tool • the ultimate solution.

That's **Beyond BLAST™** 
That's **Different Thinking.**

At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking “what if?” The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world’s most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that’s Different Thinking. That’s Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.

Beyond™ Solid End Milling

High-Performance milling in a new dimension

Kennametal is pleased to announce KCPM15™ — the first Beyond grade for solid carbide end mills. KCPM15 features an improved high-performance carbide substrate with proprietary aluminum titanium nitride (AlTiN) PVD coating.

Features and Benefits

- Engineered to increase tool life and productivity by 30%.
- For use in milling steels and stainless steels.
- Improved resistance to cratering, flank wear, and depth-of-cut notching.

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron

Coating	Grade Description	
KCPM15  AlTiN	Coated carbide grade with thick PVD coating and optimized chemistry and process for increased wear resistance. Outstanding protection in milling stainless steel to mitigate crater, DOCN (depth-of-cut notching), and flank wear. Excellent performance up to 52 HRC.	P M K

HARVI™ Line Solid Carbide End Mills

Primary Application

HARVI takes high-performance roughing, semi-finishing, slotting, and profiling to the next level. The line is designed to provide maximum metal removal rates by achieving supreme surface conditions. A wide range of diameters and corner radii are available from stock.

Features and Benefits

Higher Productivity and Profitability

- Best suited for applications in the aerospace, medical, die and mold, automotive, and general engineering markets.
- Outstanding performance in stainless steel, titanium, INCONEL®, and other high-temperature alloys and steels.
- Increased metal removal rates in roughing and finishing operations.
- Excellent performance in both slotting and side milling operations.

NOTE: Unequal flute spacing.

Featured Application: Slotting an Engine Ring

- Operation:** Slotting
- Customer:** Aerospace manufacturer
- Workpiece:** Engine ring
- Material:** SST nickel-based alloy EZ3NCT25 (25% nickel, 13% chromium) at 245 HB
- Solution:** HARVI II™ 5-flute in KCPM15 (AlTiN coating)
- Results:** 90% increase in metal removal rate

	COMPETITOR	HARVI II™
coating:	TiAlN	AlTiN
end mill:	4-flute .472" .04" radius	5-flute .472" .04" radius
material:	SST nickel-based alloy	SST nickel-based alloy
depth of cut (ap):	.44"	.44"
width of cut (ae):	.472"	.472"
speed (vc):	100 SFM	132 SFM
RPM (N):	800 RPM	1,060 RPM
feed rate (vf):	4.41 IPM	8.3 IPM
chip load per tooth (fz):	0.0014 IPT	0.0016 IPT
metal removal rate:	0.91 in ³ /min	1.73 in ³ /min

- Center cutting.
- Unequal flute spacing minimizes chatter for smoother machining.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.

For more information, please visit www.kennametal.com/carbiderecycling.

- Non-center cutting.
- Unequal flute spacing minimizes chatter for smoother machining.
- Single tool for both roughing and finishing operations for fewer setups.
- Five-flute geometry enables slotting up to 1 x D.

Solid End Milling

High-Performance Solid Carbide End Mills

In High-Performance Cutting (HPC), slow microcreeping can cause the cutting tool to be pulled out of the chuck, **turning high-quality workpieces to scrap.**

SAFE-λOCK™
by HAIMER

Be on the Safe Side with SAFE-λOCK™ in High-Performance Cutting (HPC)

Benefits

- Highly accurate clamping due to positive connection.
- No loss of accuracy.
- No pull out or spinning of the tool.
- No damage to the workpiece or machine.
- Groove on tool shank is directed so the tool will be pulled into the chuck (depending on direction of rotation).

Order Information

Kennametal high-performance end mills with a shank diameter of 1/2" and larger are available with **SAFE-λOCK™** technology, as a special tool, upon request. Please contact your local customer service location to receive a quote.

Features

- Form-closed clamping.
- High accuracy clamping.
- Helical grooves.

Functions

- No pull out.
- Excellent runout.
- Adjustable clamping length.

Benefits

- Reduce scrap rate.
- Higher tool life.
- No need to change NC program after regrinding.

Customized-Solution Example for Highest Metal Removal Rates

The HARVI II UDDE proprietary design with **unequal flute spacing** and unique core geometry for chatter-free machining enables slotting operations in titanium up to 1 x D.

SAFE-λOCK™

The safety belt for high-performance solid carbide end mills provides a form-closed clamping with high accuracy and helical grooves for length adjustment.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

NOTE: Side milling applications — For longest reach (L3) tools, reduce ae by 30%.
 Slot milling applications — For longest reach (L3) tools, reduce ap by 30%.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

NOTE: For the above cutting data, do not exceed an overall ae of .031".

Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

Looking for a product that's not shown in this catalog?
Check the Kennametal website!

Online product catalog available 24/7

Visit <http://www.kennametal.com/endmilling/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

KenFeed™ End Mills for High-Feed Milling

Primary Application

Specifically engineered to machine hardened steel up to 67 HRC at extreme speeds and feeds.

- Unique tool with new 6-flute style for high productivity.
- Necked shanks provide extended reach in deep cavities.
- High feed rates up to .0230" per tooth on a 3/4" tool.
- Machine hardened materials at 2–3x the metal removal rate of competitive end mills.
- Wide range of cutting diameters: down to 6mm for small and medium pocket work.
- Innovative new geometry maximizes metal removal rates.
- High metal removal rates lower manufacturing costs.

Featured Application: Milling a Mold

- Operation:** Pocket milling
Customer: Die and mold manufacturer
Workpiece: Mold
Material: AISI 4340 hardened steel (52 HRC)
Results: 3x better metal removal rate than competitive tool!
 Machined at more than 3x faster feed!

Increased Metal Removal Rate by 191%

Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

Solid End Milling

Best-in-Class Performance for Machining Hard Materials

Using Kennametal Solid End Mills will:

- Reduce the number of tools needed.
- Offer excellent chip evacuation.
- Promote maximum productivity.
- Increase removal rates.
- Enable higher speeds.
- Ensure accuracy.
- Reduce manufacturing costs.
- Provide long tool life.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 For better surface finish, reduce feed per tooth.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 When using tools with six flutes, reduce slotting ap by 40%.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

MaxiMet™ Carbide End Mills for High Metal Removal Rates and Superior Surface Finishes

Primary Application

Designed to significantly reduce machining time in aluminum! The innovative geometry designs include a wiper facet for superior surface finish on aluminum parts. MaxiMet takes roughing and finishing cuts with one tool.

Features and Benefits

Higher Productivity and Profitability

- Use only one tool for roughing and finishing operations.
- Slotting is effective up to full 1 x D axial depth. Side milling is effective up to 0.5 x D radial and 1.5 x D axial depth.
- Three-flute series uses unequal flute spacing for chatter-free performance.
- Effective in a full range of machine speeds.
- Multiple corner radii and extended neck configurations are available as standard.

Featured Application: Machining a Block

- Operation:** Slotting
Workpiece: Aluminum block
Material: 6061 aluminum
Solution: MaxiMet solid carbide end mill
Results: 100% better surface finish on walls and floor

MaxiMet Delivered 100% Better Surface Finish!

- Center cutting.
- Effective in thin wall applications.
- Wiper facet, special end gash, and flute geometry provide better surface finishes.
- Unique geometry delivers maximum metal removal rates.

- first choice
- alternate choice

Looking for a product that's not shown in this catalog?
Check the Kennametal website!

Online product catalog available 24/7

Visit <http://www.kennametal.com/endmilling/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, drilling, and tooling systems applications.

- Kennametal standard dimensions.
- Center cutting.
- Effective in thin wall applications.
- Wiper facet, special end gash, and flute geometry provide better surface finishes.
- Unique geometry delivers maximum metal removal rates.

MaxiMetTM

Superior Finishing

**Designed to significantly reduce machining time in aluminum!
The innovative geometry designs include a wiper facet for superior surface finish on aluminum parts. MaxiMet handles roughing and finishing cuts with one tool.**

- Use only one tool for roughing and finishing operations.
- Slotting is effective up to full 1 x D axial depth; side milling is effective up to 0.5 x D radial, by 1.5 x D axial depth.
- Three-flute series uses unequal flute spacing for chatter-free performance.
- Effective in a full range of machine speeds.
- Multiple corner radii and extended neck configurations are available as standard.

NOTE: These guidelines may require variations to achieve optimum results.
 For longest reach (L3) tools, reduce ae by 30%.
 For cutting aluminum with high silicon, coating is recommended.
 ap for spindle with ceramic bearings, multiply by 0.5.
 For better surface finish, reduce feed per tooth.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

Go Beyond™ Traditional CFRP Milling Grades • Maximize Productivity with KCN05™ Solid Carbide Routers

Primary Application

Kennametal has the correct milling solutions engineered for machining difficult CFRP (Carbon-Fiber reinforced polymer) and non-ferrous components. KCN05 solid carbide router products provide excellent tool life and produce smooth finishes with improved edge quality. The unique geometries are free cutting, reduce heat generation, and provide high-quality machined surfaces.

Features and Benefits

Compression-Style Router

- Cutters are designed to provide high feed rates.
- Produce excellent quality edges on both sides on the material.
- Up-cut/down-cut geometry establishes stable cutting conditions.

Down-Cut-Style Router

- Intended for surface work.
- Great ramping capabilities for producing pockets.
- Geometry produces down forces to eliminate surface delamination.

Burr-Style Router

- Designed for trimming fiberglass and CFRP.
- Excellent temperature control.
- Good surface quality.

Ball-End-Style Router

- Specially designed for slotting and profiling.
- Excellent tool life.

- Kennametal standard dimensions.
- Aerospace composites and fiberglass.
- Internal air coolant for ZU=4.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 For tools 2 x D < LOC < 3 x D, ae = 0.25 x D; for tools with LOC longer than 3 x D, ae = 0.1 x D.

Solid End Milling

High-Performance Solid Carbide End Mills • Roughing

Features and Benefits

- Highest metal removal rates.
- Innovative roughing geometries.
- Different radius styles.

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron
S	High-Temp Alloys
H	Hardened Materials

- Kennametal standard dimensions.
- Center cutting.
- Chipbreaker profile.

beyond

- first choice
- alternate choice

NOTE: These guidelines may require variations to achieve optimum results.

Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 For rougher tool with six flutes, use ap in slotting, reduce by 40%.

Solid End Milling

General Application Solid Carbide End Mills

Features and Benefits

- Wide range of diameters.
- Short, regular, long, and extra-long overall length.
- Different coatings.

Applications:

Side Milling

Slotting

3-D Milling

Workpiece Materials:

P	Steel
M	Stainless Steel
K	Cast Iron
N	Non-Ferrous Materials
S	High-Temp Alloys
H	Hardened Materials

GOmill™ • The Economical Milling Cutter Line

Primary Application

The GOmill line is specifically engineered to work on short length-of-cut applications in multiple workpiece materials, like soft and hard steels up to 48 HRC, stainless steels, high-temperature alloys, and cast iron. With the very short overall length and soft cutting geometries, the line is made to conform to the growing market of millturn machines.

The 3-flute sharp and 4-flute chamfer versions support roughing, semi-finishing, and finishing applications. The 3-flute ball nose tool supports roughing and semi-finishing applications. The 2-flute ball nose version requires finishing applications. All three geometries work in slotting as well as side milling applications up to 1 x D depth of cut.

Features and Benefits

- Unequal flute spacing.
- AlTiN coating.
- Short overall tool length.
- Positive rake angle.
- Better surface finish and tool life.
- Universal usage on multiple workpiece materials.
- Higher cutting conditions, higher productivity, lower price due to less carbide.
- Lower power consumption.

Portfolio:

- 4-flute square end, chamfer corner, 5/32–1/2".
- 3-flute square end, sharp corner, 5/64–1/2".
- 3-flute ball nose, 5/64–1/2".
- 2-flute ball nose, 5/64–1/2".

Functions:

- Less vibrations.
- Optimum combination of hardness and toughness.
- Extremely stable.
- Soft cutting.

- Kennametal standard dimensions.
- Center cutting.

- first choice
- alternate choice

Solid End Milling

- Kennametal standard dimensions.
- Center cutting.
- Unequal flute spacing minimizes chatter for smoother machining.
- Single tool for both roughing and semi-finishing operations for fewer setups.

NOTE: These guidelines may require variations to achieve optimum results.
 Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.
 For long lengths, reduce fz by 20%.

NOTE: These guidelines may require variations to achieve optimum results.

Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.

Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.

Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

For long lengths, reduce fz by 20%.

NOTE: Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
 Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
 Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.
 For long lengths, reduce fz by 20%.

NOTE: These guidelines may require variations to achieve optimum results.
Lower value of cutting speed is used for high stock removal applications or for higher hardness (machinability) within group.
Higher value of cutting speed is used for finishing applications or for lower hardness (machinability) within group.
Above parameters are based on ideal conditions. For smaller taper machining centers, please adjust parameters accordingly on >1/2" diameter.

High-Performance Milling Chucks

- Heavy- and fine-milling capabilities.
- Prebalanced G6.3 @ 20,000 RPM — six threaded M6 holes to accept set screws for fine balancing.
- Heavy milling — tighten locknut until O-ring on back face of locknut just touches the flange on the chuck body to achieve runout .0004" 3 x D1.
- Fine milling — tighten as above, then back the locknut off 1/8–1/4 turn to achieve runout .0002" 3 x D1.
- Sub-zero heat treatment for material stability.
- Through-the-toolholder coolant capability using stop screw as sealing device.
- 3/8" axial adjustment stop screw.

Indexable Inserts

The Most Advanced Milling Solutions in the Industry

For unsurpassed quality, value, and performance, you can trust Kennametal to provide the most comprehensive line of reliable metalcutting tools. Whatever your indexable milling product requirements, be assured that you will find the appropriate solution in this all-inclusive, easy-to-use guide.

For every milling application, workpiece, or equipment need, we offer the best tools on the market, designed to reduce your machining time, provide superior surface finishes, and outperform the competition.

Choose your application:

- Face Milling
- Chamfer Milling
- Shoulder Milling
- Slotting
- Copy Milling
- Ceramic Milling
- Thread Milling

Identify material to be machined:

Each tool has a material grid marked with a letter indicating the materials that can be machined.

- first choice
- alternate choice

H									

catalog number	D	BS	L10	Re	S	hm	cutting edges
HNPJ43ANSNGD	.472	.057	.254	.039	.175	.003	12

6

■ Step 7 • Defining the Feed per Tooth

Geometry (S.GD)

20% radial width of cut, follow arrows for value.

% = radial width of cut (Ae) ÷ cutter diameter (D1)

Using a round or ball nose insert, consider the axial depth of cut; see separate chart on the cutter page.

■ Recommended Starting Feeds [IPT]

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)														Insert Geometry				
	10%				20%				30%				40%				50-100%		
F..LDJ	.005	.010	.019	.004	.007	.014	.003	.006	.012	.003	.006	.012	.003	.006	.011	F..LDJ			
E..LD	.005	.014	.029	.004	.011	.021	.003	.009	.019	.003	.009	.017	.003	.008	.017	E..LD			
S..GD	.010	.022	.038	.007	.016	.028	.006	.014	.024	.006	.013	.022	.006	.013	.022	S..GD			
S..HD	.010	.024	.039	.007	.018	.029	.006	.015	.025	.006	.014	.023	.006	.014	.023	S..HD			

NOTE: Use "Light Machining" values as starting feed rate.

7

7

Always consider starting with the "Light Machining" value. Once established, increase the feed per tooth from the chart.

These are minimum values and can be increased when the application has been proven.

Light Machining — Low Feed Rate, High Speed

General Purpose — Normal Feed, Normal Speed

Heavy Machining — Higher Feed, Reduced Speed

■ Step 8 • Recommended Starting Speeds [SFM]

8

How Do Catalog Numbers Work?

Each character in our catalog number signifies a specific trait of that product. Use the following key columns and corresponding images to easily identify which attributes apply.

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KC530M 	A premium TiAlN-PVD-coated carbide grade enabling extended tool life at moderate feeds and high cutting speeds. First choice for milling in all steels, including die and mold steels, and is recommended for use without coolant.	P								
		M								
KC537M 	A tough, general-purpose TiAlN-PVD-coated carbide grade for medium to heavy milling applications for use in all steels and cast irons. KC537M can be used either wet or dry.	P								
		M								
		K								
KC5410 	An extremely hard TiB ₂ -PVD-coated grade that provides very good wear characteristics at high cutting speeds and is best suited for machining aluminum with <10% silicon and other non-ferrous materials. KC5410 resists built-up edge, can help reduce the burring effect, and will generate excellent surface finishes.	N								
KC610M 	A high-performance, TiN-TiCN-TiN-PVD-coated carbide grade characterized by good hardness and wear resistance for milling all types of material and is the first choice for steel. KC610M should be used with coolant or minimal lubrication.	P								
		M								
		K								
		S								
KC620M 	A TiN-PVD-coated carbide grade suitable for machining cast iron, non-ferrous materials, and aluminum alloys that can be used for wet or dry machining.	P								
		K								
		N								
KC635M 	A high-performance, TiAlN-PVD-coated grade characterized by high hardness and wear resistance. KC635M is suitable for cutting hard materials up to 65 HRC and is first choice for stainless steel.	P								
		M								
		K								
KCPM20 	KCPM20 is a multilayered TiN-MT-TiCN-Al ₂ O ₃ -CVD-coated carbide grade with advanced Beyond™ post-coat treatment. The substrate is a well-balanced combination of wear resistance and toughness. KCPM20 is primarily for light and general machining of steels and stainless steels or roughing of cast irons.	P								
		M								
		K								
KC715M 	KC715M has a deformed substrate and PVD coating that can handle high temperatures and higher surface speeds making it ideal for dry machining. KC715M is primarily for use in light and general machining of steel, stainless steel, and cast steel.	P								

Coatings provide high-speed capability and are engineered for finishing to heavy roughing.

Grade

Coating	Grade Description		05	10	15	20	25	30	35	40	45
KC720M	A TiAlN-TiN-PVD-coated carbide grade engineered to provide balanced wear and deformation resistance in combination with excellent breakage resistance.	P									
		M									
KC725M	A high-performance TiAlN-PVD-coated carbide grade for milling steel, stainless steel, and ductile cast iron. The good thermal shock resistance of the substrate makes this grade ideal for both wet and dry machining. KC725M is primarily for use in general and heavy machining.	P									
		M									
		S									
KC730M	A TiN-PVD-coated carbide grade with a tough substrate and is recommended for general milling with moderate speeds. KC730M can be used wet or dry.	P									
		M									
KC735M	A TiN-PVD-coated carbide grade offering an unusual combination of high toughness and wear resistance. Even under extreme toughness requirements, KC735M achieves outstanding results in general and heavy machining applications and is suitable for dry and wet machining.	P									
		M									
KCK15	A multilayered TiN-MT-TiCN-Al ₂ O ₃ -CVD-coated carbide grade with advanced Beyond™ post-coat treatment. KCK15 is a wear-resistant grade with balanced toughness for general milling of cast irons at higher speeds. Best results in dry but can also be used wet.	K									
KTPK20	A multilayered TiAlN-AlCrN-PVD-coated cermet. This tough cermet is primarily for use in light and general machining of steel, stainless steel, and cast iron and performs best dry.	P									
		M									
		K									
KCPK30	A multilayered TiN-TiCN-Al ₂ O ₃ -CVD-coated carbide grade with advanced Beyond™ post-coat treatment and a very tough substrate. KCPK30 has a wide application area in general and rough milling of steels and cast irons. It performs best dry but can also be used wet.	P									
		K									
KCMP30	A multilayered TiN-TiCN-Al ₂ O ₃ -CVD-coated carbide grade with advanced Beyond™ post-coat treatment and a very tough substrate. KCMP30 has a wide application area in general and rough milling of steels. It performs best dry but can also be used wet.	P

Grade

Coating	Grade Description	05	10	15	20	25	30	35	40	45
KYSP30 	Combines excellent wear properties, fracture toughness, and thermal shock resistance for general purpose to finish machining of high-temperature alloys. KYSP30 provides superior depth-of-cut notch resistance compared to whisker ceramics.									
KYS30 	KYS30 is the latest in the line of α/βSiAlON grades for general purpose to finish machining of high-temperature alloys. This grade provides excellent wear characteristics, with better toughness and thermal shock resistance than whisker ceramics. KYS30 also gives improved thermal stability.									
KB1340 	A PCBN cutting material with micrograin structure for light to general machining of gray cast iron and hard materials. The grade has good wear resistance and is ideal for finishing.									
KD1410 	A PCD-tip brazed to carbide for machining aluminum with a very high silicon content, abrasive non-ferrous materials, and fiber-reinforced plastics. KD1410 can be used at very high cutting speeds, even where good surface finishes are required. This grade can be used both wet or dry but is suggested to use coolant where good surface finishes are required.									
KD1415 	PCD-tip brazed to carbide for general machining of aluminum with a low silicon content, non-ferrous heavy metals, and plastics. KD1415 can be used at high cutting speeds and for continuous cutting, even where outstanding surface finishes are required. KD1415 is suitable for wet and dry machining.									
KD1420 	A varied-grain, PCD-brazed tip grade suited for machining low silicon aluminum, non-ferrous heavy metals, and plastics. It can be used for high cutting speeds where outstanding surface finishes are required and is suitable for dry and wet machining.

Dodeka™ Series • Leader in Advanced Face Milling Applications

Primary Application

Dodeka, Dodeka Mini, and Dodeka MAX™ are the most comprehensive face milling boosters on the market today. Twelve true cutting edges per insert mean low cost per edge and high productivity. With Beyond™ premium milling grades, you will see up to 30% higher Metal Removal Rates (MRR), 25% lower cutting forces due to real soft cutting action, and up to 35% better tool life in light to heavy machining.

Features and Benefits

Dodeka Mini Series • Most comprehensive face milling booster in the market, up to $A_{p1} \text{ max} = .174''$

All different cutter body variations can be loaded with one insert style.

Dodeka Mini High-Feed

12 True Cutting Edges  **75° lead**

Insert HNGJ43
HNPJ43

$A_{p1} \text{ max} = .064''$

Dodeka Mini HF can be loaded with all Dodeka Mini standard inserts, except wiper inserts.

Dodeka Mini 45°

12 True Cutting Edges  **45° lead**

Insert HNGJ43
HNPJ43

$A_{p1} \text{ max} = .127''$

Best-in-class leader in face milling up to $A_{p1} \text{ max} = .127''$. Excellent choice for near net shape strategies and driven tools.

Dodeka Mini 30°

12 True Cutting Edges  **30° lead**

Insert HNGJ43
HNPJ43

$A_{p1} \text{ max} = .174''$

Achieve a higher axial depth-of-cut capability up to $A_{p1} = .174''$ with standard Dodeka Mini inserts.

NOTE: Use "Light Machining" values as starting feed rate.

- Twelve cutting edges per insert.
- Maximum number of teeth per diameter.
- Productivity booster in all materials.

NOTE: Use "Light Machining" values as starting feed rate.

- Twelve cutting edges per insert.
- Higher A_{p1} max with standard inserts.
- Productivity booster in all materials.

NOTE: Use "Light Machining" values as starting feed rate.

- Twelve cutting edges per insert.
- Through-coolant on cutters <4" diameter.
5" diameter cutters and above do not have through-coolant.
- Soft cutting action.

Indexable Milling

Online product catalog available 24/7

Visit <http://www.kennametal.com/milling/> to browse our electronic catalog any time you're looking for Kennametal's best tooling solutions. It's fast, free, and always available. The online e-catalog is updated weekly with products and solutions for milling, turning, holemaking, and tooling systems applications.

- Twelve cutting edges per insert.
- 25% lower cutting forces.
- Laser-hardened pocket seats.

KM4XTM

The Next Generation Spindle Interface for Heavy-Duty Machining!

KM4X is designed to take on your most aggressive machining jobs. This next generation KM spindle interface should be your first choice for heavy-duty machining applications. It's especially suited for large structural components, like titanium aerospace components.

We engineered these rotating and static tool adapters to handle 3x more bending capacity than similar competitive models.

What does this mean for you?

- Enables full use of machine and cutting tools for the highest productivity.
- Higher metal removal rates.
- Can retrofit to existing machines to boost throughput without buying new equipment.
- Ideal for aerospace and transportation industry machining jobs.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

MEGA 45° • Superior Heavy-Duty Milling

Primary Application

With four true cutting edges per heavy-duty MEGA 45° insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA 45° inserts for all of your steel and cast iron indexable milling needs.

Features and Benefits

Features

Four true cutting edges per heavy-duty MEGA 45° insert.

Soft cutting edge design.

Up to 30% increased Metal Removal Rates (MRR).

Carbide pocket shims.

Benefits

Low cost per edge and high productivity.

30% lower cutting forces.

Performance leader in steel and cast iron materials.

Excellent cutter body protection.

4 True Cutting Edges

Soft cutting edge design

Integrated wiper facets for excellent floor finish

LNPU863

Strong insert for stable machining

- Four cutting edges per insert.
- Ap1 max = .675".
- Up to 30% higher metal removal rate (MRR).
- Cutter body protection with carbide shims.

 **KENNAMETAL®**

MEGA 15, 60, and 90

Primary Application

The real performance booster in heavy-duty milling. With four true cutting edges per heavy-duty insert, you know you are getting the low cost per edge and high productivity you need and have come to expect from Kennametal. The soft cutting edge design enables 30% lower cutting forces, and the carbide shim provides protection to the cutter body. Choose MEGA 15, MEGA 60, and MEGA 90 for all of your steel and cast iron indexable milling needs.

Features and Benefits

Features

- Four true cutting edges per heavy-duty insert.
- One insert style for MEGA 15, MEGA 60, and MEGA 90.
- Soft cutting edge design.
- Up to 30% increased Metal Removal Rates (MRR).
- Carbide pocket shims.

Benefits

- Low cost per edge and high productivity.
- Maximum flexibility to address application needs.
- 30% lower cutting forces.
- Performance leader in steel and cast iron materials.
- Excellent cutter body protection.

Face Mills

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.

Recommended Starting Feeds [IPT]

Light Machining	General Purpose	Heavy Machining
-----------------	-----------------	-----------------

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50-100%			
.S..HD	.027	.062	.099	.019	.044	.067	.017	.038	.058	.016	.036	.053	.015	.035	.052	.S..HD

NOTE: Use "Light Machining" values as starting feed rate.

- Four cutting edges per insert.
- A_{p1} max = .843".
- Up to 30% higher metal removal rate (MRR).
- Cutter body protection with carbide shims.

Beyond BLAST™ • KSSM™ 45

More than just the right tool — the ultimate solution.

Primary Application

The Beyond BLAST KSSM 45° utilizes Precision Coolant Technology (PCT) to aggressively apply coolant directly to the cutting area. Not only does this reduce heat at the cutting edge, but it also assists with reducing tool and chip friction, increasing chip evacuation, and relieving shear stress. Because the Beyond BLAST technology can be applied in low-pressure conditions, there is no need to invest in additional equipment. It's so easy to convert from conventional to Beyond BLAST technology, it can be done directly on the floor — virtually eliminating costly downtime. See what the performance leader can do for your titanium machining.

Features and Benefits

Features	Benefits
PCT — Precision Coolant Technology.	Coolant delivery exactly to the cutting area.
Increased heat transfer.	Less tool/chip friction and shear stress.
Improved chip control.	True internal coolant assists chip evacuation.
Beyond BLAST also works with regular low-pressure conditions.	No need for investments in high-pressure equipment.
Easy to convert from conventional to Beyond BLAST Technology.	Shop-floor-proven handling reduces costly downtime.
Up to 100% better tool life.	Performance leader in machining titanium.

- Precision Coolant Technology (PCT).
- Coolant delivery exactly to cutting area.
- Increased heat transfer.
- Improved chip control.
- Productivity booster for machining titanium.

Face Mills

KSSM™ 45°

Primary Application

Universal face mill for conventional machining.

Features and Benefits

- Insert SE.T1404.
- $A_{p1} \text{ max} = .260"$.
- Four true cutting edges.
- Pocket seat protection with carbide shims.
- Easy handling and rapid insert change.

-LD2

For light machining and semi-finishing,
light edge prep.

-GP2

For medium roughing,
medium edge prep.

-GB2

For heavy roughing,
strongest edge protection.

- Consumes less power.
- Rapid insert changes.

NOTE: Use "Light Machining" values as starting feed rate.

More than just the right tool • the ultimate solution.

That's **Beyond BLAST™**

That's **Different Thinking.**

At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking “what if?” The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world’s most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that’s Different Thinking. That’s Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.

beyond™ BLAST™

KSOM™ Mini • KSOM™

Primary Application

Super soft cutting due to super positive rake face.

Features and Benefits

Features

- KSOM Mini: insert OFKT53/OFPT53.
- KSOM: insert OFKT64/OFPT64.
- KSOM Mini: Ap1 max = .138" (8 indexes); Ap2 max = .354" (4 indexes).
- KSOM: Ap1 max = .197" (8 indexes); Ap2 max = .461" (4 indexes).

Benefits

- Low cutting forces deliver higher feed capability.
- Excellent performance in stainless steel and super alloys.
- First choice solution in machining turbochargers.

Insert OF.T53/OF.T64

- Eight cutting edges per insert.
- Super soft cutting.

Face Mills

Fix-Perfect™ Cast Iron Rougher and Finisher

Primary Application

Performance booster in machining cast iron materials. Based on workpiece requirements, Fix-Perfect covers all face- and shoulder-milling applications when machining cast iron materials with best-in-class productivity. Eight true cutting edges per insert deliver low cost per edge and best CPP ceramic inserts available as standard line items.

Features and Benefits

Fix-Perfect Cast Iron 20° and 0° Roughing and Finishing in One Tool

- Innovative tangential insert clamping.
- First choice for high feed rates.
- Protection of non-cutting edges.
- Adjustable element for fine finishing with wiper inserts.
- PCBN-tipped wiper inserts available for excellent floor finish.
- Micro-precise runout setup.

Fix-Perfect Cast Iron Finisher Best-in-Class Fine-Finishing Concept

- Rigid and stable cutter design.
- High-precision pocket seat.
- Perfect axial runout without insert adjustment.
- Reliable, excellent floor finish and flatness.
- Easy handling and low-cost cutter setup.

NOTE: Use "Light Machining" values as starting feed rate.

Face Mills

■ Insert Loading Procedure

1. Clean insert and insert pocket seat.
2. Load insert — push insert against pin and axial pocket wall.
3. Tighten screw to a torque of 45 in. lbs.
4. Check the axial runout.
5. Do not exceed the maximum recommended RPM.

tool diameter (inch)	maximum axial runout	maximum RPM
4.00	.0004	12750
5.00	.0004	10200
6.00	.0015	7950
8.00	.0015	6350

- Eight cutting edges per insert.
- Rough and finish in one operation.
- Tangential mounted inserts deliver higher feed rates.
- Adjustable pockets (D1 = 3–10").

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.
KY3500™ can be used for machining of low tensile ductile irons (e.g., 65-45-12).

■ Recommended Starting Feeds [IPT]

Light Machining	General Purpose	Heavy Machining
-----------------	-----------------	-----------------

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50-100%			
.E..GP	.005	.010	.019	.004	.007	.014	.003	.007	.012	.003	.006	.011	.003	.006	.011	.E..GP
.T..GP	.007	.017	.034	.005	.013	.025	.005	.011	.021	.004	.010	.020	.004	.010	.020	.T..GP
.S..GP	.007	.016	.032	.005	.012	.023	.004	.010	.020	.004	.010	.019	.004	.009	.018	.S..GP

NOTE: Use "Light Machining" values as starting feed rate.

- Eight cutting edges per insert.
- Rough and finish in one operation.
- Tangential mounted inserts deliver higher feed rates.
- Adjustable pockets (D1 = 3–6").

Introduction to Fitting Cutting Bodies

	procedures:	roughing		roughing/finishing	
		fixed pocket	adjustable pocket	fixed pocket	adjustable pocket
1	Reset adjusting element T x T9	—		—	
2	Insert roughing insert Tighten SW 3 M _{AN} = 44 in. lbs.				—
3	Tighten adjusting element gently	—		—	—
4	Insert finishing insert and pre-tighten SW 3 M _{VG} = 9 in. lbs.	—	—	—	
5	The finishing insert is positioned .0016" in front of the highest roughing insert	—	—	—	
6	Tighten the finishing insert M _{AN} = 44 in. lbs.	—	—	—	

NOTE: This process must be repeated whenever an indexable insert is changed.
The ball is loose.

Changing the adjusting element

1. Remove the taper screw ①.
2. Loosen the SW 1,5 screw ②.
3. Remove the adjusting element.

ATTENTION: The maximum permissible cutting speed of the milling cutter heads is $v_c \text{ max} = 3000 \text{ SFM}$. Only use original parts when clamping the indexable inserts.

HexaCut™ Series

Primary Application

The Kennametal HexaCut face milling program is specifically engineered for rough and semi-finish face milling of cast, ductile, and compacted graphite iron. Twelve cutting edges drastically reduce your cost per edge and increase tool life. Shorter setup times and excellent cutter accuracy allow you to apply the HexaCut program to the most demanding jobs. One ceramic and eight carbide grades with six insert geometries deliver high feed rates and will enable you to reach optimum horsepower.

Features and Benefits

Tailor-Made Platform for Machining Automotive Components in Cast Iron Materials

- First choice for machining GCI and CGI materials.
- 45° lead cutter bodies engineered with fixed pockets for roughing applications up to $A_{p1} \text{ max} = .256"$.
- 30° lead cutter bodies engineered with fixed and adjustable pockets for roughing and combined roughing/finishing applications up to $A_{p1} \text{ max} = 8\text{mm}$.
- Fine pitch cutter density for best productivity in machining cast iron materials.
- Comprehensive standard offering of different insert geometries to match every application for light, medium, and heavy machining.
- Easy handling and cutter body setup.
- Twelve true cutting edges per insert for low cost per edge and excellent CPP.
- Split case design with adapter flange available as preferred engineered solution standard for $D1 = 10"$ and $D1 = 12"$.

NOTE: Use "Light Machining" values as starting feed rate.

■ Adjustment Instructions

Before Being Used for the First Time

- The milling cutter must be carefully cleaned of anti-corrosive materials, dust, etc.
- The milling cutter should only be washed when all components have been dismantled.
- Only the double-threaded screws of the clamping or adjusting wedge should be lubricated with copper grease; all other components must have clean metallic surfaces.
- A torque wrench is recommended to tighten the double-threaded screws.
- When fitting indexable inserts on the milling cutter, ensure that they are inserted in the correct position in a clean insert seat and that they are held in position during clamping.

For 45° Roughing Mills without Anvils

- The double-threaded screws on the clamping wedges for the indexable inserts are first pre-tightened to approximately 17 in. lbs. and then tightened to a final torque of 62 in. lbs.

ATTENTION

At each tool adjustment, the body, indexable inserts, and spare parts must be checked and replaced, if necessary. Before each tool use, the double-threaded screws of the indexable inserts and the stops must be tightened in the specified order to a torque of 62 in. lbs. In addition, even if the cartridges have not been adjusted, the double-threaded screws of the adjusting wedges must be checked to see if these have been tightened to a torque of 26 in. lbs. If not, they must be re-tightened to this torque.

NOTE: The tools must only be used in accordance with their function. We accept no liability for their improper use. Changes of any kind and/or printing errors are not valid grounds for claims.

- Monoblock cutter design.
- Twelve cutting edges per insert.
- High feed rates.
- CGI milling solution.

NOTE: Use "Light Machining" values as starting feed rate.

Insert setting procedure

This procedure is to be used on all 30° lead roughing/finishing mills using the unmarked roughing cartridge, the finishing cartridge (marked ●) and the corrected edge cartridge (marked ■). These steps must be followed when adjusting the cutters for finishing inserts.

- 1 Clean all insert pockets.
- 2 Mount all wedges and cartridges. Torque the cartridge lock wedge screw to 26 in. lbs.
- 3 Mount all inserts, making sure they are seated properly in the pocket, and torque the insert lock wedge screws to 26 in. lbs.
- 4 Torque the wedge screws for all fixed pocket inserts to 62 in. lbs.
- 5 Loosen the cartridge insert wedge screw and the cartridge lock wedge screw.
- 6 Pressing the insert into the cartridge pocket, adjust the cartridge to .008-.012" below the fixed pocket inserts.
- 7 Torque the insert lock wedge screw and the cartridge lock wedge screw to 26 in. lbs.
- 8 Adjust the axial position to .0010-.0015" above the fixed pocket inserts.
- 9 Loosen the cartridge insert lock wedge screws and then re-torque to 26 in. lbs.
- 10 Adjust the axial position to the final dimension, .0015-.0020" above the highest fixed pocket insert.
- 11 Torque the insert lock wedge screws and the cartridge lock wedge screws to 62 in. lbs.
- 12 Conduct a final check of the axial runout and position.

The NEW KSSR™ 6°

Primary Application

Kennametal's new line of KSSR 6° inserts are versatile, easy-to-use, and right- or left-hand neutral, making them ideal for automotive machining operations or any other industry that relies on transfer line manufacturing. Available in carbide and ceramic grades for applications in cast and ductile irons and alloy steels, choose KSSR 6° inserts for all your fine and coarse pitch styles.

Features and Benefits

KSSR 6° Features

- Available in metric, JIS, and inch products, diameters from 2.5–10".
- Fine and coarse pitch styles.
- Easy-to-use and to adjust with shorter setup time.
- New wiper inserts in carbide and ceramic will provide excellent surface quality.

Improved Versatility

- Proven solution on the automotive segment.
- Right- and left-hand cutters, ideal for transfer lines.
- Premium grades in carbide and ceramic for applications in cast and ductile irons and alloy steels.
- Inserts are neutral and can be used for right- or left-hand cutting.

Unrivaled Benefits

- Capability: .20" maximum depth of cut.
- Excellent accuracy:
 - Radial = +/- .0001"
 - Axial = adjustable +/- .0001"
- Inserts have eight true cutting edges.

- Eight cutting edges per insert.
- Fast and easy insert indexing.
- Highest feed rates.
- CGI specialist.

NOTE: Use "Light Machining" values as starting feed rate.

KSSR™ 6° Adjustable Pockets

- Clamping and adjustment wedge with double thread screw.
- Eight true cutting edges.
- Wiper insert ahead of roughing insert on cast iron materials.
- Wiper insert can also be loaded into cutters with only fixed pockets.

Visit www.kennametal.com or contact your local Authorized Kennametal Distributor.

KCMS™ Cartridge Milling System for Face, Shoulder, and Copy Milling

Primary Application

The KCMS Cartridge Milling System for face, shoulder, and copy milling offers the best-in-class flexibility for the price. The system enables roughing and finishing applications with the same tool, reducing the costly downtime associated with tool changes. The ease with which the cartridges and inserts can be changed only adds to the overall functionality of the tool and secures the KCMS Cartridge Milling System as the first choice for simplified rough and finish milling.

Features and Benefits

Features

Roughing and finishing solution with the same tool.

Easy change of cartridges with different insert styles and lead angles.

Quick cartridge stop feature.

Easy runout adjustment.

Benefits

Adjustable pockets in combination with quick cartridge stop feature.

Best-in-class flexibility for less money.

Ready to go in a minute with excellent runout and no adjustment for roughing.

For finishing operations to obtain a perfect floor finish.

KCMS™ Key Features — Roughing and Finishing with the Same Tool

• Axial adjustment wedge.

Standard Offering
D1 = 5-12" (125-315mm)

- Quick cartridge stop.
- Ready to go in a minute with no adjustment for roughing.

- Roughing and finishing with one single tool.
- Quick cartridge stop feature.
- Easy runout adjustment.
- Easy change of cartridges with different insert styles and lead angles.

NOTE: Please order KCMS cutter bodies and cartridges separately.

KCMS-RN1204CA: Cartridge for Rodeka™, IC12 with 12 cutting edge indexes.

KCMS-WO0905CA: Cartridge for KenFeed 2X, High-Feed platform with 6 effective cutting edges per insert.

Face Mills

KSCM™ AluMill™

Primary Application

The KSCM AluMill face milling program is specifically engineered to deliver best-in-class performance in high-volume aluminum machining operations. Runs at higher speeds with no chatter while still easy to adjust. The new PCD KD1420™ grade provides long tool life, and with the Kennametal Blue Box™ program for reconditioning worn cartridges, you can reduce your inventory costs as well!

Features and Benefits

- Anti-vibration cutter design.
- Best rigidity for high feed rates.
- Unique dovetail wedge clamping design.
- No radial movement of cartridges.
- Centrifugal force protection cartridge design.
- Integrated chip gash into cartridge.
- Quick setup and easy adjust concept.
- Flexible cartridge configuration.
- No burr cartridges for fine finishing.
- Blue Box service.

- Productivity booster in aluminum face milling.
- Rough and finish in one operation.
- Precision balanceable cutter bodies produce mirror-finish surfaces.

NOTE: Use "Light Machining" values as starting feed rate.

Face Mills

Tool Configuration • Universal Cartridge

Face milling cutter fitted entirely with universal cartridges

Depth of Cut:
max .118"

Surface Quality:
Rz2 - Rz4

Contouring:
PCD cutting edge length = .197"

Tool Configuration • Universal Cartridge

+ Finishing Cartridge

Fitting the face milling cutter with universal and finishing cartridges in a ratio of approximately 3:1

Depth of Cut:
max .118"

Surface Quality:
Rz1,5 - Rz2,5

Contouring:
PCD cutting edge length = .197"

Tool Configuration • Edge Cartridge

Fitting the face milling cutter entirely with edge cartridges

Depth of Cut:
max .118"

Surface Quality:
Rz2 - Rz4

Contouring:
PCD cutting edge length = .197"

Tool Configuration • Cartridge for Defined Surfaces

Fitting the face milling cutter entirely with cartridges for defined surfaces

Depth of Cut:
max .118"

Surface Quality:
Rz3,2 - Rz17

Contouring:
PCD cutting edge length = .197"

■ Tool Configuration • Universal Cartridge, 75° Face Milling

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 88 in. lbs.
3. Screw in the adjusting screws (RH), and tighten to 26 in. lbs.
4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 μ m.

■ Tool Configuration • Universal Cartridge + Finishing Cartridge (Ratio Approx. 3:1), 75°

1. Insert universal cartridges at ratio of approximately 4:1 in the body. Make sure they are evenly distributed!
2. Screw in the clamping screws (RH), and tighten to 88 in. lbs.
3. Screw in the adjusting screws (RH), and tighten to 26 in. lbs.
4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 μ m.
6. Insert finishing cartridges as described in Steps 1–5 but with an axial advance of .0003" + .0008". Max permitted runout error of 3 μ m with finishing cartridges.

■ Tool Configuration • Edge Cartridges, 90° Shoulder Milling

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 88 in. lbs.
3. Screw in the adjusting screws (RH), and tighten to 26 in. lbs.
4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 μ m.

■ Tool Configuration • Cartridge for Defined Surface, 75°

1. Insert cartridges into the body.
2. Screw in the clamping screws (RH), and tighten to 7 ft. lbs.
3. Screw in the adjusting screws (RH), and tighten to 26 in. lbs.

4. Determine which cartridge is in the highest axial position.
5. By turning the adjusting screws to the right, adjust the remaining cartridges for even running. Max permitted runout error 3 μ m.

NOTE:

The process must be repeated when the cartridges are changed. To dismantle, remove the adjusting element (Part 3), clamping screw (Part 2), and cartridge (Part 1).

■ Instruction for Mounting the Face Milling Cutter on the Appropriate Toolholder

User Information:

- Tools conform to EN ISO 15641.
- Absolute cleanliness must be observed when assembling the face milling cutter.
- An optimum cutting result will only be achieved by adjusting and balancing the complete tool system (face milling cutter + toolholder).
- Balancing is achieved with the aid of the balancing screws. Quality class G2.5 DIN-ISO 1940.
- The balancing screw must not protrude above the body.
- The balancing and adjustment screws have an adhesive coating according to DIN 267, Part 28. If, after repeated use, the coating is no longer adequate to secure the screws, the screws must be replaced.
- The maximum permitted operating speed (quoted on the tool) must not be exceeded.
- The maximum permitted operating speed is only permitted with clamping systems manufactured by Kennametal in accordance with DIN 69982 Form B with enlarged plane bearing surface. Reduce the operating speed if clamping systems with increased projection length or made by other manufacturers are used.
- Tools and fittings are to be serviced and repaired by Kennametal.
- Screws sealed with lacquer have been adjusted by the manufacturer, and must not be moved.

■ Instructions for Fitting the Cutter Cartridge • Tool Construction

When mounting the face milling cutter (dimensions similar to DIN 8030 Form B), place the body of the face milling cutter on the arbor. Ensure that the contact faces are clean. Screw in the cutter fastening bolt (RH) and tighten with the appropriate torque.

Tightening torque for the central cutter tightening screw:

- M20** (adapter diameter 40): **184 ft. lbs.**
- M16** (adapter diameter 32): **110 ft. lbs.**
- M12** (adapter diameter 27): **59 ft. lbs.**

■ Mounting the Face Milling Cutter (Dimensions Similar to DIN 8030 Form C)

Place the body of the face milling cutter on the arbor. Ensure that the contact faces are clean. Screw in the fastening bolt (RH) and tighten with the appropriate torque. Put the aluminum coolant cover in place and fasten with the Torx fastening screws.

Tightening torque for the face milling cutter fastening screws:

- M20:** 184 ft. lbs.
- M16:** 81 ft. lbs.
- M12:** 36 ft. lbs.

Tightening torque for the coolant cover fastening screws:

- M8:** 13 ft. lbs.

KSCM AluMill Reconditioning Service

New Supply

On request, the face mill will be delivered with cartridges already mounted and adjusted.

Service Level • PCD Insert Reconditioning

Reconditioning of PCD cartridges up to three times.

- Tool diameter and length remain constant.

Face mill will be delivered with exchanged cartridges already mounted, adjusted, and balanced.

Fix-Perfect™ 0° Aluminum

Primary Application

The Fix-Perfect 0° is excellent in machining aluminum and non-ferrous materials. 24° positive rake provides free cutting action while producing superior finishes and flatness.

Features and Benefits

- True 0° shoulder achievable.
- Roughing and finishing in one tool.
- Full safety first insert clamping.
- Easy adjustable pocket seats for fine finishing (PM, HPM, HSM Line).
- Achievable floor surface quality: Ra = 0.5.
- Real soft cutting action.
- Axial depth of cut Ap1 max = 3.74".

- Excellent for milling aluminum and non-ferrous materials.
- Good choice for thin-wall or poorly fixtured workpieces.
- 24° positive rake enables free cutting action.
- Produces excellent finish and flatness.
- Maximum speed is 6,500 SFM.

Introduction to Fitting Cutting Bodies

Roughing indexable inserts
BGHX15L5PC..GG.

Finishing indexable inserts
BGHX15L5PC..GG.1W

Clean dust, grease, etc., from the insert seat, insert (1), and clamp stud (2).

PM

HPM/HSM

PM/HPM/HSM

Loosen the adjusting element (4).

Loosen the adjusting element (4).

Loosen the adjusting element (4).

1

Loosen the adjusting screw (5).

Loosen the adjusting screw (5).

Loosen the adjusting screw (5).

Insert the indexable inserts and tighten with the clamping screw (3) 44 in. lbs.

Insert the indexable inserts and pre-tighten with the clamping screw (3) 13 in. lbs.

Insert the indexable inserts and pre-tighten with the clamping screw (3) 9 in. lbs.

2

ATTENTION: Ensure that the insert is correctly positioned in the insert seat.

ATTENTION: Ensure that the insert is correctly positioned in the insert seat. Determine which cutting body is the highest on the axis.

ATTENTION: Ensure that the insert is correctly positioned in the insert seat. Determine which cutting body is the highest on the axis.

Tension the adjusting element (4) by tightening the adjusting screw (5) to the specified torque of 4.5 in. -lbs.

Extract by .0008" the insert that is axially the highest by turning the adjusting screw (5).

Adjust the finishing indexable insert(s) to the desired projection, preferably .0015" by turning the adjusting screw (5).

3

Adjust the remaining inserts to the desired runout with maximum travel of the inserts .008".

ATTENTION: Ensure that the insert is correctly positioned in the insert seat.

Adjustment element to be replaced by Kennametal Service Center only.

4

Clamp the insert by tightening the clamping screw (3) to the specified torque of 44 in. lbs.

Clamp the insert by tightening the clamping screw (3) to the specified torque of 44 in. lbs.

Chamfer Mills

Primary Application

Countersinking and external/internal chamfer milling.

Features and Benefits

- One insert style fits into all pockets to cover 60°, 45°, and 30° chamfering.
- Soft cutting action.
- Chamfer milling front and back.

60° lead angle

45° lead angle

30° lead angle

- Countersinking and chamfering front and back.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit www.kennametal.com/carbiderecycling.

Mill 1-10™ • High-Performance Shoulder Milling Platform

Primary Application

The multifunctional Mill 1-10 platform works with all tool materials in shoulder, ramp, slot, plunge, and helical milling with one insert style to improve productivity and reduce inventory and machining costs. The super positive cutting rake, soft cutting action, and low cutting forces enable higher feed rates and spindle protection. Innovative insert and cutter body designs offer improved ramping capabilities.

Features and Benefits

Versatility

- Works with all tool materials.
- Capable of shoulder, ramp, plunge, and helical milling.
- Internal coolant and air supply.

Advantages

- Optimized soft cutting edge.
- Elliptical edge generates 0° wall.
- Increased ramping capability due to state of the art insert and cutter body design.
- Innovative chip gash design for excellent chip evacuation and perfect cutter body stability.
- All pockets are machined into heat-treated materials, guaranteeing best-in-class runout and pocket strength.
- Inserts feature innovative margin along the main cutting edge, corner nose radius, and wiper facet for perfect edge stability.

To learn more, [scan here](#).
For instructions on how to scan, please see page xxix.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 0° walls.
- High RPM capabilities.

NOTE: Use "Light Machining" values as starting feed rate.

LOIS™ — Mill 1-14™

**Load Optimized Insert Spacing with
an Unmatched Soft Cutting Action**

**Boost productivity in all your complex
contour milling and full slotting operations!**

- Reduced cutting forces.
- Balanced cut.
- Reduced power fluctuation.
- Coolant through tool for machining exotic materials.
- Versatile cutting strategies:
 - Slot
 - Profile
 - Plunge
 - Ramp

www.kennametal.com

 **KENNAMETAL®**

Mill 1-14™

Primary Application

Mill 1-14 is a versatile, functional cutter system for a range of cutting tasks. Mill 1-14 cutters can be used for profiling, slotting, ramping, helical interpolation, circular interpolation, and other milling applications. It's a single tool with multi-functional benefits. The Mill 1-14 inserts also are specially designed to add cutting versatility. Innovative micro-geometry features contribute greatly to enhanced performance, various rake angles, negative T-land, and small hone. Results include significantly reduced cycle times and lower cutting forces. Test results in producing 0° walls have proven excellent as well; try GD2 geometry.

Features and Benefits

Features

- Insert geometries and grades for most workpiece materials.
- Insert radii from .016" (0,15mm) up to .157" (4mm).
- Axial depth of cut up to .551" (14mm).
- Beyond™ grade technology.

Benefits

- Easy cutting action, kind on entry and also exiting the workpiece.
- Polished geometry for aluminum machining.
- Slotting, profiling, ramping, helical interpolation, and plunging.

- Aggressive ramping angles.
- Generates superior surface finish.
- Mill 0° walls.
- High RPM capabilities.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
 For more information, please visit www.kennametal.com/carbiderecycling.

■ Application Examples

insert style	cutting diameter	max ramp angle	min hole diameter (DH min)	max flat-bottom hole diameter (DH1 max)	max diameter (no flat bottom)
Mill-1, 14mm	.625	25°	.625	1.065	1.25
Mill-1, 14mm	.750	18°	.869	1.130	1.50
Mill-1, 14mm	.875	13°	1.113	1.562	1.75
Mill-1, 14mm	.970	11°	1.300	1.752	1.94
Mill-1, 14mm	1.000	10°	1.360	1.812	2.00
Mill-1, 14mm	1.250	7°	1.862	2.312	2.50
Mill-1, 14mm	1.500	6°	2.361	2.812	3.00
Mill-1, 14mm	1.250	7°	1.873	2.322	2.50
Mill-1, 14mm	1.500	5°	2.370	2.822	3.00
Mill-1, 14mm	2.000	4°	3.368	3.822	4.00
Mill-1, 14mm	2.500	3°	4.367	4.822	5.00
Mill-1, 14mm	3.000	2°	5.366	5.822	6.00
Mill-1, 14mm	4.000	2°	7.366	7.822	8.00

NOTE: Max ramp angle decreases as nose radius increases.

Shoulder Mills

Mill 1-10™

Carbon-Fiber's Finest

**The Kennametal Mill 1-10 Indexable Milling Series —
Face Milling, up to 100% Engagement with PCD Inserts**

Ideal for applications utilizing Carbon-Fiber Reinforced Polymer (CFRP).

- Aggressive ramping rates, high RPM capabilities, and a superior surface finish — time after time.
- Varying axial depth of cut meets a wide range of applications.
- No material breakout or burr formation upon entry or exit of the workpiece.

Choose the Mill 1-10 to mill 90° walls.

Visit www.kennametal.com or contact your local Authorized Kennametal Distributor.

www.kennametal.com

 **KENNAMETAL®**

Mill 1-14™ Helical Cutters

Primary Application

The Mill 1-14 helical cutters will increase your axial depth of cut. Designed with axial support pins for added stability, the Mill 1-14 features our essential Load-Optimized Insert Spacing™ (LOIS) technology. LOIS dramatically minimizes unwanted vibrations and fluctuations in power requirements, resulting in a much smoother-sounding cut. Up to nine different coolant nozzle diameters enable tailoring to suit each machine tool, providing remarkably consistent, focused coolant flow.

Features and Benefits

Functions

- Improves axial depth of cut better than standard end mills due to the positioning of inserts in helical configuration.
- Up to nine different coolant nozzle diameters tailored to suit each machine tool.
- One tool that offers features common to end mills, but rarely seen on a helical cutter: Helical ramping from solid, slotting, contouring, ramping, and plunging.

Benefits

- Increases depth of cut.
- Consistent, focused coolant flow.
- Built for performance, accuracy, and versatility.

- Aggressive ramping rates.
- Generates superior surface finish.
- Mill 0° walls.
- Axial support pins.
- Unique coolant nozzles.

Mill 1-14	2.50	1.9°	4.367	4.822	5

Best Machining Practices

Shoulder Mills

Contouring/Profiling
Ae = up to 50% of cutter Ø.
This can be used with or without coolant/air blast, depending on materials being machined.

Slotting
Full width cutting or profiling over 50% of the cutter Ø. It is suggested to use coolant or air blast to evacuate chips. If necessary, reduce coolant nozzle hole size, which adds more pressure, and the chip is forced out of the chip gash.

Ramping
Only machine to the depth of the first insert. Observe the ramping angles given in the catalog.

■ Slotting by Plunging

Slot with the alternate side method, alternating the cuts from side to side. This will enable the cutter to move away from the material prior to moving back up in the Z-axis. The cutter will not be in contact with the workpiece. Follow the direction of the arrows. Move 3 axes simultaneously into the center of the slot. Maximum step over .315" (8mm).

With multiple Z-axis passes, when the final depth is achieved, move straight back up in the Z-axis, then repeat at the next step over.

- ¹ Number of effective flutes.
- ² Mounting style: W = Weldon®; S = Shell mill.
- ³ Max ramp angle when radial depth of cut exceeds 0.31" (8mm).
- ⁴ Max insert corner radius allowed in first row without cutter body modification.
- ⁵ Recommended for profiling applications only.

Shoulder Mills

Profile, Slot, and Ramp

When taking a cut that equals up to 50% of the cutter diameter, you can operate without coolant, unless your material is coolant-dependent. When using more than 50% of the cutter diameter, there is a need to have coolant or an air blast through the nozzles. This will assist with chip evacuation. Please use the feed table when taking a small percentage of the cutter diameter. This will improve the volume of material removed. To achieve a superior surface finish on the base, adjust the feed to suit the finish required.

When using this cutter for plunging, the maximum suggested step over is .130" (3,30mm). Always try to move the cutter and insert away from the material when retracting in the Z-axis. This can be done when employing the alternate cut method (zig zag method). Use a 3-axis move to get all axes moving at the same time, suggest .010" (0,25mm).

When machining a conventional slot, you have to move straight up in the Z-axis.

Circular and Helical Interpolation

External

When profiling around the external part of a component, it is important to increase the feed rate. This will maintain the chip thickness value. The programmed feed rate needs to be calculated at the cutter centerline.

For external profiling, adjust the feed rate for feed at the cutter centerline. Increase the feed rate for external profiling.

Internal

When machining inside a component profile, the area of contact is larger. The feed rate needs to be slower and at the centerline.

For internal profiling, adjust the feed rate for feed at the cutter centerline. This will effectively reduce the feed rate as the distance traveled is less than the peripheral distance.

Cutting Data

Reference page P41 for both speed and feed data. Each insert has an average chip thickness value that will enable you to determine the feed per tooth.

Please remember when using less than 50% of the cutter diameter, the feed rate will need to be increased. Failure to do so will result in premature insert failure.

Running too slowly will reduce tool life.

Spare Parts

Please make sure all the spare parts in the cutters are fully tightened prior to using the product.

Shell mill cutters no longer have coolant grooved bolts. We now have adapters that will enable the coolant to be fed through the adapter pilot diameter.

True Through Coolant Shell Mill Adapters

ERICKSON™

Superior Gripping

For bearing milling chucks when grip counts.
ERICKSON — the industry name you can trust.

- Heavy- and fine-milling applications.
- Great accuracy $\leq 5\mu\text{m}$ (.0002") at 3 x D and best gripping system.
- Pre-balanced to high specifications.
- Versatile as a collet chuck with the use of reduction sleeves.

Visit www.kennametal.com or contact your local Authorized Kennametal Distributor.

 **KENNAMETAL®**

Mill 1-18™

Primary Application

Mill 1-18 is a versatile, functional cutter system for a range of cutting tasks. Mill 1-18 cutters can be used for profiling, slotting, ramping, helical interpolation, plunging, and other milling applications. It's a single tool with multi-functional benefits. The Mill 1-18 inserts also are specially designed to add cutting versatility, especially for larger axial depths of cut. Results include significantly reduced cycle times and lower cutting forces.

Features and Benefits

Features

- Inserts for larger axial depth of cut.
- Inserts radii up to .250" (6,35mm).
- Axial depth of cut up to .708" (18mm).
- Cutter diameters up to 8" (160mm).
- Beyond™ grade technology.

Benefits

- Slotting, profiling, ramping, helical interpolation, and plunging.
- Angled screw for insert retention.
- Insert geometries and grades for most workpiece materials.

- Aggressive ramping angles.
- Generates superior surface finish.
- Mill 0° walls.
- High RPM capabilities.

D1	insert screw	in. lbs.	Torx Plus driver
.970	MS2126	30.0	DT15IP
1.000	MS2126	30.0	DT15IP
1.250	MS2126	30.0	DT15IP

NOTE: "R" in catalog number designates factory relieved tool for insert radii .187" and .250". For example: M1D100E1802W100L375R.
Additional insert screws may be ordered in packages of five pieces from catalog number MS2126PKG.
Standard milling cutters will accept insert nose radii up to .078" without modification.

Shoulder Mills

- Aggressive ramping angles.
- Generates superior surface finish.
- Mill 0° walls.
- High RPM capabilities.

■ End Mills • Reduced Weldon® Shank

Shoulder Mills

Mill 1-25™

Primary Application

Also known as Mill1 Max, the Mill 1-25 cutter is made specifically for aluminum machining but is also useful when machining cast iron. High-Feed capabilities enable routing applications with an axial depth of cut of up to .98" (25mm).

Features and Benefits

Functions

- Strong, thick inserts over .200" (5,2mm) thick.
- Axial depth of cut up to .98" (25mm).
- Cylindrical, monoblock/HSK63A, CV50, and shell mills.

Benefits

- Made for machining aluminum, but also useful for machining cast iron.
- High-Feed capability for routing applications.
- Balanced-by-design — if running over 10,000 RPM, balance the cutter assembly.

- For aluminum machining.
- High-speed capability.
- Insert screws should be changed when inserts are changed.

Shoulder Mills

More than just the right tool • the ultimate solution for titanium machining

That's **Beyond BLAST™** 
That's **Different Thinking.**

At Kennametal, innovation follows vision. Our revolutionary products and services are inspired by asking “what if?” The solutions that follow — like our Beyond BLAST through-coolant inserts — deliver remarkable results in the world’s most demanding machining environments.

A cutting-edge insert that delivers coolant precisely at the cutting edge. Now that’s Different Thinking. That’s Kennametal.

To learn more about your productivity gains using Beyond BLAST technology, visit www.kennametal.com.

Milling

- Beyond BLAST technology uses low-pressure conditions to offer many of the high-pressure performance benefits.
- Delivers superior performance on titanium, using either high- or low-pressure coolant systems.
- Effective thermal management results in reduced cutting temperatures, improved lubricity, superior chip control, and longer tool life.
- Beyond BLAST for milling increases tool life by up to 100% compared with conventional coolant delivery systems.

beyond™ BLAST™

KSSM™ • Platform

Primary Application

The Kennametal KSSM platform is a versatile solution providing three insert sizes that cover a wide range of applications: face milling, shoulder milling, slotting, profiling, and Z-axis (plunge milling).

Features and Benefits

KSSM IC10

- Four cutting edges.
- Excellent surface finishes.
- Low power requirements.

KSSM IC12

- Four cutting edges.
- Excellent surface finishes.
- Low power requirements.
- Increased depth of cut.

KSSM IC15

- Four cutting edges.
- Excellent surface finish.
- Low power consumption.
- Economical cutting solution.

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

KSSM-KSSP Helical

Primary Application

The KSSM-KSSP helical cutters were originally developed and proven for the aerospace industry but are now available for all industries. The proprietary variable rake design minimizes vibration and chatter.

Features and Benefits

Features

- Patented HARVI™ technology.
- Progressive helical rakes.
- Unique coolant supply.

Benefits

- Increased tool life in titanium.
- Increased metal removal rates.
- Lower power consumption.
- Ensures chip evacuation, even on exotic materials.

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

■ End Mills • Weldon® Shank

Beyond BLAST™ • KSSM™ 45°

**More than just the right tool —
the ultimate solution for titanium machining**

Features and Benefits

- PCT — Precision Coolant Technology.
- Coolant delivery exactly to the cutting area.
- Increased heat transfer.
- Less tool/chip friction and shear stress.
- Improved chip control.
- True internal coolant assists chip evacuation.
- Beyond BLAST also works with regular low-pressure conditions.
- No need for investments in high-pressure equipment.
- Easy to convert from conventional to Beyond BLAST technology.
- Shop-floor-proven handling reduces costly downtime.
- Up to 100% better tool life.
- Performance leader in machining titanium.

beyond™ BLAST™

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

 **KENNAMETAL®**

- Four cutting edges per insert.
- Excellent surface finishes.
- Low power requirements.

Shoulder Mills

Screw-On Milling Cutter Adapters

The Complete Solution to Milling

Features and Benefits

- High metal removal rates.
- High runout accuracy.
- Maximum performance capability.
- Optimizing productivity with long reach and short overhang to support all types of applications.
- Cutter is kept on centre for precision and maximum performance compared to Weldon® shank system.
- Ability to extend with standard offering extensions and reducers.
- Ground face contact for rigidity and accuracy.

NOTE: Consult the Kennametal Tooling Systems catalog for information on holders.

www.kennametal.com

 **KENNAMETAL®**

KFSR™ Heavy-Duty Cutter

Primary Application

The KFSR heavy-duty cutter is specifically engineered for heavy-duty milling of steel and cast iron — with unparalleled chip control and large axial depth of cut. Engineered for applications requiring higher cutting speeds and feed rates with low cutting forces, it is ideally suited for the automotive, heavy automotive, rail, shipbuilding, construction vehicles, and general engineering industries.

Features and Benefits

Features

- Enables heavy machining with low cutting forces and less vibration.
- Uses less horsepower with increased metal removal rates.
- Inserts with three and four serrations generate small chips for easy evacuation.
- Cutter design alternates the two insert styles to provide better overall chip control.
- Inserts stacked in helical rows.
- Replaceable shim provides pocket protection for leading insert. (NOTE: 63mm cutters do not contain a shim).

Notching

- Cutter design alternates two insert styles (G3 and G4) to provide better overall chip control.
- Insert serrations reduce cutting forces.
- Special chipbreaker generates small, controllable chips for easy evacuation.

- Lower cutting forces with serrated inserts.
- Small chips for ease of evacuation.
- Improved metal removal rates.
- **IMPORTANT:** Load the inserts in the correct position; see additional details below.

■ Shell Mill

order number	catalog number	D1	D	L	Ap1 max	Z	Z U	figure	lbs
3578346	KFSR300R1AP25	3.000	1.000	1.970	.925	4	4	FIG 3	2.66
3578347	KFSR300R2AP25	3.000	1.000	2.760	1.770	8	4	FIG 1	3.85
3578349	KFSR400R2AP25	4.000	1.250	2.760	1.770	12	6	FIG 1	4.53
3578348	KFSR400R1AP25	4.000	1.250	1.970	.925	6	6	FIG 3	3.37

Insert pocket detail:

- If insert pocket is marked with number “3”, use insert AP ER-G3.
- If insert pocket is marked with number “4”, use insert AP ER-G4.
- It is very important to use the correct insert in position 3 or 4. Failure to do this will result in damage to the cutter body.
- Only use inserts with nose radii greater than .030" in the first row.

KTMS™ Slotting Cutter

Primary Application

KTMS slotting cutter produces “T” slots in machine beds as well as small radial depths of cut for machining shallow radial slots. There is always a need to prepare the slot before using this type of cutter — preparation is the key to success. See the technical information for information about the pre-machining on page Q6. Please note that all of these cutters have metric diameters, speeds, and feeds.

Features and Benefits

- Only available in metric dimensions.
- Slot widths from 9–22mm.
- Three different insert sizes.
- Preparing the component before slotting is the key to success.
- Prepare workpiece with a slot.
- Honed insert edges.
- Feed rates between 0,10–0,15mm; lower feed rates will induce vibration.
- Use air flow to evacuate chips.
- Always start the cutting process with a new cutting edge.

- Prepare workpiece with a slot.
- Honed insert edges.
- Feed rates between 0,10–0,15mm; lower feed rates will induce vibration.
- Use air flow to evacuate chips.
- Always start the cutting process with a new cutting edge.

NOTE: Use "Light Machining" values as starting feed rate.

Fig. 1

Fig. 2

Fig. 3

Side Slotting

■ Steel

- Machining a vertical slot, depth to be kept at a minimum as shown in Figure 1.
- If the depth is greater than Figure 1, chip evacuation problems could occur.
- Vibrations could occur when the T-slot cutter diameter increases; use Figure 1 as the starting point.
- If chattering is a concern, adopt the Figure 2 solution.

■ Cast Iron

- Fewer problems with chip evacuation and reduced cutting forces enable deeper vertical slots as shown in Figures 2 and 3.
- Air blast is recommended to disperse the chips; this can be used for steel and cast iron.

KSRM™

Multipurpose Milling Cutters

Specially developed for machining titanium and stainless steel. KSRM platform enables you to pocket, profile, ramp, and plunge with up to .039" (1mm) fz with consistent performance, providing outstanding metal removal rates with the lowest cutting forces in roughing applications.

- Anti-rotation feature with eight indexes.
- High positive topography with strong cutting edges.
- High clearance on the cutters and inserts.
- Wide cutter offering with internal coolant.
- Ground and PSTS inserts.
- Provides more stability and reliability.
- Lower cutting forces generated.
- Cutters can run with higher feed rates and better ramping capacities.
- Cover extensive workpiece materials.
- Superior productivity and better insert utilization/cost per edge.
- Able to convert all milling applications.
- Improve tool life and chip evacuation.
- Superior overall performance.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

 **KENNAMETAL®**

KVNS™ Slotting Cutter

Primary Application

The KVNS slotting cutter enables diameters from 2.50–10" and insert widths from .063–.245". It is a perfect solution for small groove widths, grades, and geometries and suits most materials. Drive rings and support rings are available; use these items to get the maximum support for the cutter body.

Features and Benefits

- Slot widths from .063–.245".
- Grades and geometries to suit most workpiece materials.
- Drive rings and support rings available, must be ordered separately (in pairs).
- Self clamping inserts.
- .063–.245" slot width range.
- Positive chipforming inserts are standard.
- Self-clamping insert seat with fixed stop.
- Excellent for all flat-bottom slotting and cut-off operations.
- Two drive hubs required for each cutter body, except when using two drive supports (must be ordered separately, in pairs).

- .063-.245" slot width range.
- Positive chipforming inserts are standard.
- Self-clamping insert seat with fixed stop.
- Excellent for all flat-bottom slotting and cut-off operations.
- Two drive rings required for each cutter body, except when using two drive supports (must be ordered separately, in pairs).

Slotting Cutters

■ **Secure Clamping • Self-Clamping Insert Seat for Maximum Machining Safety**

Using the assembly wrench:
Fitting the insert

Removing the insert

- Exact position of the insert guaranteed by the positive stop.
- Maximum possible insert repeatability with dual positive prism clamping.
- Powerful, secure clamping guarantees high peripheral speeds.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
For more information, please visit www.kennametal.com/carbiderecycling.

SN Slotting Cutter

Primary Application

SN slotting cutters are perfect for deeper applications that require the cutting load to be shared from one insert to the other. Provides groove widths from .161–.187" and cutter diameters from 4–6" as well as an economical way to achieve balanced cutting.

Features and Benefits

- Cutters available in arbor mount.
- Inserts with four indexes.
- Staggered key ways in mounting bore, used for multiple ganged cutters.
- Slot width .161–.187".
- Three insert geometries available: -GP, -GE, and -T.
- Requires only one spare part.
- Economical to use.

- .161-.187" slotting width range.
- Four indexes per insert.
- Three chipformers available.
- Two keyways for staggered mounting.
- Requires only one spare part.
- Economical to use.

LN Slotting Cutter

Primary Application

LN slotting cutters offer arbor and shell mill cutter options, groove widths from .250–.539", and cutter diameters from 3–8". Easy to adjust radially in .020" increments.

Features and Benefits

- Cutter available in arbor and shell mounts.
- Groove width .250–.500".
- Groove width can be changed by consulting additional chart; this involves changing insert and insert screw.
- Staggered internal keys.
- Positive chip grooves.
- Easy width adjustment through insert thickness.
- Full side and face cutting.
- Neutral and positive chipforming inserts are standard.
- Four insert cutting edges.
- Requires only one spare part.

- .250-.500" slot width range.
- Easy width adjustment through insert thickness.
- Full side and face cutting.
- Neutral and positive chipforming inserts are standard.
- Four insert cutting edges.
- Two keyways for staggered mounting.
- Requires only one spare part.

NOTE: Slot width tolerance is +/- .003" over standard insert.

- .250-.500" slot width range.
- Easy width adjustment through insert thickness.
- Full side and face cutting versions.
- Neutral and positive chipforming inserts are standard.
- Four insert cutting edges.
- Requires only one spare part.

Slotting Cutters

- Utilizes wider inserts in standard cutter bodies.
- Cutting width of the unique LNE insert style for narrow slotting cutters can be varied by using an insert one size thicker.
- The width can be increased in .0195" and .039" increments.
- Refer to the insert combination table below for insert selection.

NOTE: Use "Light Machining" values as starting feed rate.

KSSM™ Slotting Cutter

Primary Application

With insert grades and geometries for most materials, the KSSM fixed-width slotting cutters are a cost effective solution for the general engineering market. Very precise adjustments to achieve consistent widths are possible with the variable width and enables customers to change the tool from right hand to left hand with a change of cartridge.

Features and Benefits

- Cutters available in arbor and shell mounts.
- Cutters right and left hand and full slotting have fixed widths.
- Groove widths: Fixed .614"; Adjustable .551–.917".
- Rapid adjustment mechanism.
- Large insert selection — grades and geometries.
- Wiper inserts.
- Insert radii from .016–.250".
- Right-hand and left-hand cutters with .359" depth of cut.
- Diameter range is 4–12".
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Five insert radii available.
- Faceted inserts for superior surface finishes.

- Right-hand and left-hand cutters with .359" width of cut.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Insert radii available.
- Faceted inserts for superior surface finishes.

- Rapid adjustment and setting via unique cam adjustment mechanism.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Large selection of insert radii.
- Wiper insert facets for superior surface finishes.

.S..GB2	.007	.017	.028	.005	.013	.020	.004	.011	.018	.004	.010	.016	.004	.010	.016	.S..GB2

NOTE: Use "Light Machining" values as starting feed rate.

- Right- and left-hand cutters available.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Large selection of insert radii.
- Faceted inserts for superior surface finishes.

8.000	MS2078	35	DT15IP
10.000	MS2078	35	DT15IP

NOTE: For superior surface finish, use left-hand inserts.

Slotting Cutters

- Neutral slot width (B min) is .739" + .010" wide.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Large selection of insert radii.
- Faceted inserts for superior surface finishes.

- Rapid adjustment and setting via unique cam adjustment mechanism.
- Large selection of insert geometries and grades to cut most workpiece materials.
- Four insert cutting edges.
- Large selection of insert radii.
- Wiper insert facets for superior surface finishes.

NOTE: Use "Light Machining" values as starting feed rate.

■ KSSM Slot Width Adjustment Instructions

1. Measure body width at pocket 1 (per stamp on tool body) behind cartridge.
2. Zero tool presetter at pocket 1 behind cartridge.
3. Move presetter over the insert and set distance Y.
 $Y = (\text{Desired Slot Width} - \text{Body Width}) / 2$.
4. Zero over insert at starting pocket (pocket 1).
5. Adjust remaining cartridges on the same side.
6. Return to starting pocket and start with step 2 for opposite side of cutter.

■ KSSM Cartridge Adjustment Instructions

1. Insert 3mm hex wrench into STCM Screw.
2. Rotate 3mm hex wrench counter-clockwise to loosen wedge.
3. Rotate 3mm hex wrench clockwise to lightly tighten STCM screw to approximately 9 in. lbs., so the wedge is touching the cartridge and cutter body. This creates some slight resistance against the cartridge during the adjustment.

4. Insert hex wrench into cam pin behind cartridge.
5. Rotate wrench to adjust cartridge to desired position.
6. For best accuracy, back cam pin off, so you can feel it is not touching the sides of the slot in the back of the cartridge.
7. Remove wrench from cam pin.

8. Insert 3mm hex wrench into STCM screw
9. Tighten STCM screw to 55 in. lbs. prior to using the cutter. Kennametal torque wrench KTW45 or alternate torque wrench should be used.
10. Double check cartridge position to assure no movement.

Beyond BLAST™ KSSM 45°

beyond™ BLAST™

More than just the right tool — the ultimate solutions

The Beyond BLAST KSSM 45° utilizes Precision Coolant Technology (PCT) to aggressively apply coolant directly to the cutting area. Not only does this reduce heat at the cutting edge, but it also assists with reducing tool and chip friction, increasing chip evacuation, and relieving shear stress. Because the Beyond BLAST technology can be applied in low-pressure conditions, there is no need to invest in additional equipment. It's so easy to convert from conventional to Beyond BLAST technology, it can be done directly on the floor — virtually eliminating costly downtime. See what the performance leader can do for your titanium machining.

- Easy to convert from conventional to Beyond BLAST technology.
- Up to 100% better tool life.
- Less tool/chip friction and shear stress.
- Beyond BLAST also works with regular low-pressure conditions.
- Performance leader in machining titanium.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

KenFeed™ 2X • The Ultimate and Innovative Concept for Applying the Latest High-Feed Milling Strategies

Primary Application

KenFeed 2X is a double-sided trigon insert with six cutting edges engineered to provide you a superior MRR and productivity through high-feed rates for roughing operations.

Features and Benefits

- Dramatically improves MRR using the latest milling strategies.
- Engineered to run up to 0,1 IPT.
- Ideal for pocketing, ramping, and helical interpolations. Z-plunge capabilities.
- First choice for deep cavities or from 3 x D.

Indexable Inserts • WOEJ09....

- Double-sided insert with six cutting edges.
- Unique and strong insert design that enables high-feed conditions, up to 0,1 IPT.
- HD geometry is the first choice for steels, high-strength steels, and cast iron.
- GD provides lower cutting forces, first choice for soft materials.

NOTE: Use "Light Machining" values as starting feed rate.

General Programming Information for Applying KenFeed 2X • IC09

Rt	Wt	t
.110	.312	.045

Small Ap1 values and higher feed rates generate lower cutting forces versus traditional milling strategies.

For CAM programming, the loads can be programmed as a toroidal tool type by using the Rt value as the insert radius.

Recommended when long overhang is necessary due to lower radial forces. Maximum L/D ratio of 10 x D.

KenFeed™ Mini • Small High-Feed Milling Cutters for Machining Small and Medium Components

Primary Application

Roughing operations through the latest milling strategies up to 55 HRC. Specially suited for small parts or machines with lower power capacity. **The KenFeed Mini delivers higher productivity with reduced tooling costs.**

Features and Benefits

Platform designed for pocketing, ramping, and helical interpolations.

Screw-On and shell mill cutters with internal coolant. Coolant holes: better chip evacuation and higher the tool life.

Excellent runout accuracy increases general performance and higher tool life.

Strong design capacity to support higher cutting forces and unstable situations.

Just two topographies to cover all applications with easy selection.

Insert and body design with superior copy milling capabilities enable us to run the cutter with true ramping, profiling, and pocketing capabilities.

- Engineered to use with small machines and/or components using high-feed milling strategies.
- Fine-pitch cutters boost productivity; able to run up to 0,05 IPT.
- Pocketing, ramping, and helical interpolations.
- First choice above 3 x D applications.

General Programming Information for Applying KenFeed Mini

Rt	Wt	t
.039	.094	.016

For CAM programming, the loads can be programmed as a toroidal tool type by using the Rt value as the insert radius.

Small Ap1 values and higher feed rates generate lower cutting forces versus traditional milling strategies.

Rodeka™ • The New Round Insert Generation

Primary Application

Kennametal introduces a new and revolutionary double-sided round milling insert capable to run in multiple types of milling operations and workpiece materials, providing the latest double-sided insert technology to boost your productivity with the most efficient cost per edge.

Features and Benefits

Double-sided insert with up to 12 cutting edges for a more productive cutting process.

Screw-On, end mill, and shell mill cutters with internal coolant.

Higher clearance in bodies to permit pocketing, profiling, and 5-axis machining.

Unique anti-rotation feature for excellent stability with higher feed rates and cutting forces. User-friendly insert rotation.

Three insert and topography styles to cover any type of component and application.

To learn more, *scan here*.
For instructions on how to scan, please see page xxix.

- Double-sided round insert with 12 indexable positions.
- Anti-rotation features enable higher cutting data and extra stability.
- Pocketing and profiling capabilities.

Rodeka 8 Turbine Blade Version

Revolutionary double-sided round insert engineered for turbine blade machining. Special geometries, insert styles, and dedicated cutter bodies have been developed to serve this demanding application.

Four indexes per side, in total eight cutting edges. With higher A_p capabilities, up to 6mm.

Specific high positive geometries with improved chip forming and higher tool life.

Insert location twisted by 45° between top and bottom side for equal performance over all eight cutting edges.

Unique anti-rotation feature with higher contact area for excellent stability, allowing higher feed rates.

Light/Medium Machining
 First choice for stainless steel
 and titanium machining.

Medium/Heavy Machining
 First choice for medium/heavy
 operations. Forged blades
 or "bad skin".

KDM • Strong, Flexible, and Highly Accurate

Primary Application

Roughing and finishing milling operations on complex parts. First choice for die and mold industry up to 55 HRC.

Features and Benefits

Platform Features

- Big draft clearance angle to improve the pocketing operations performance.
- Big clearance area in the bottom, superior ramping, and helical values.
- High accuracy and tight runout.

Value Proposition

- Real HSM capabilities: more teeth and close accuracy.
- Strongest and most rigid design for roughing operations.
- Addressed to the die and mold and general engineering markets, mainly.
- PSTS and ground inserts are offered through different inserts sizes.
- Shell mill, Weldon® and straight shank, and Screw-On body cutters.
- Multiple grades available; wide range of workpieces and applications.

- Engineered for maximum performance.
- High runout accuracy.
- Suitable for die and mold manufacturing.

KSRM™ • Multipurpose Milling Cutters

Primary Application

Specially developed for machining titanium and stainless steel. KSRM platform enables you to pocket, profile, ramp, and plunge with up to .039" (1mm) fz with consistent performance, providing outstanding metal removal rates with the lowest cutting forces in roughing applications.

Features and Benefits

- Engineered for titanium and stainless steel machining.
- Anti-rotation components feature eight indexable positions.
- Pocketing, ramping, plunging, and helical interpolation capabilities.

Beyond BLAST™ KSRM™ • Next Generation Round Inserts with Through Coolant

Primary Application

Specially developed for machining titanium. Beyond BLAST KSRM platform boosts your productivity with its new and revolutionary technology, PCT (Precision Coolant Technology), enabling consistent performance and providing outstanding metal removal rates and longer tool life.

Features and Benefits

Platform Features	Benefits
Channeling coolant through the insert.	Increase productivity, tool life, and chip control.
Anti-rotation feature with six indexes.	Superior productivity and better insert utilization/cost per edge.
High positive topography with strong cutting edges.	Long tool life and better MRR.
High clearance on the cutters and inserts.	Able to convert all milling applications.

To learn more, [scan here](#).
For instructions on how to scan, please see page xxix.

- Use PCT technology, coolant through the insert.
- Engineered to provide the maximum performance in titanium machining.
- Anti-rotation feature enables up to six indexables rotations.
- Pocketing, ramping, plunging, and helical interpolations capabilities.

- Use PCT technology, coolant through the insert.
- Engineered to provide the maximum performance in titanium machining.
- Anti-rotation feature enables up to six indexables rotations.
- Pocketing, ramping, plunging, and helical interpolations capabilities.

KDMB™ and KDMT™ • Indexable Copy Insert Platform

Primary Application

Ball nose and toroidal styles for roughing and finishing operations. Engineered with the ultimate technologies and supported with a wide range of diameters and insert styles, this platform provides exceptional performance and productivity. The new High-Feed insert style provides the highest metal removal rates for roughing applications.

Features and Benefits

Longer Tool Life and Improved Geometries

- Longer tool life for finishing operations, up to 63 HRC.
- High-accuracy inserts and holders: overall runout .0004".
- Improved geometries for roughing and finishing operations.
- Smaller diameters from .25" to replace SCEM, setting a more productive machining process.

Superior Productivity

- Due to the new helical geometry, we obtain better surface quality.
- New ultra-grain grade for outstanding tool life.
- Diameters .250" and .312" natural replacement for SEM tools.
- Better cost per edge.

Usability and Flexibility

- Wide diameter range enables it to be applied across a wide range of machining conditions.
- Many workpiece materials are possible — from hardened steel to aluminum.
- Large holder style offering: screw-on, cylindrical, and tapered steel and carbide holders.

- Cutting diameter ranges from .375–1.250".
- Ball nose finishers for 3-dimensional applications.
- Suitable for roughing and finishing operations.

Insert Style
HC Geometry:

PSTS geometry with chipbreaker for roughing. Semi-finishing and rest material of steel, cast steel, and high-temperature alloys.

GP Geometry:

High-precision insert with helical geometry for semi-finishing and finishing of steel up to 63 HRC, cast steel, and high-temperature alloys.

GN Geometry:

Geometry with extremely solid cutting edge for roughing cast steel, high-temperature alloys, and hardened steel up to 60 HRC.

H	1	—	—	—	860	670	550	550	400	310	260	200	170

NOTE: FIRST choice starting speeds are in **bold** type.
As the average chip thickness increases, the speed should be decreased.

Calculating Working Diameter and Resulting Surface Speed

Case 1:

It is important to consider the effective diameter (Dw) when using light depths of cut in order to properly calculate RPM values. Use the following formula when machining flat surfaces or inclinations of 10° or less to find the Dw value. Then, use this for RPM calculations, as opposed to using the overall insert diameter (D1).

$$Dw = \sqrt{D1^2 - (D1 - 2Ap1)^2}$$

Case 2:

When machining inclinations between 11° and 55°, further modification of vc is required. Apply factor “k” from the given formula to calculate the correct vc (vceff). This corrected value is then used to calculate the proper RPM for the tool.

$$k = \frac{1}{\sin [\alpha + \arccos (1 - (2 (Ap1/D1)))]}$$

$$vceff = vc \times k$$

Copy Mills

- Cutting diameter ranges from .500–1.000".
- High precision and runout accuracy.
- Can be used with the heat shrink technology, h6 shank tolerance.
- Suitable for roughing and finishing operations.
- Works with toroidal and High-Feed inserts.

■ Recommended Starting Feeds [IPT]

Light Machining	General Purpose	Heavy Machining
-----------------	-----------------	-----------------

Insert Geometry	Programmed Feed per Tooth (fz) as a % of Radial Depth of Cut (ae)															Insert Geometry
	10%			20%			30%			40%			50-100%			
.E..GC	.007	.010	.014	.005	.008	.010	.004	.007	.009	.004	.006	.008	.004	.006	.008	.E..GC
.E..GN	.007	.010	.014	.005	.008	.010	.004	.007	.009	.004	.006	.008	.004	.006	.008	.E..GN

NOTE: Use "Light Machining" values as starting feed rate.
For plunging in Z-axis, use the 50-100% values (no chip thinning).

■ Application Advice for KDMT-HF Insert Style

For CAM programming, the tools can be programmed as a toroidal tool type requiring the diameter and the RT values only.

insert type	inch			
	Ap max	diameter	RT	max fz
KDMT0500SRHF	0.025	0.500	0.045	0.050
KDMT0625SRHF	0.030	0.625	0.050	0.050
KDMT0750SRHF	0.040	0.750	0.080	0.050

■ Data for Face Milling, Pocketing, and Profiling Operations

Starting Values

tool diameter	Ø.500"	Ø.625"	Ø.750"
Ap max (mm)	0.024	0.031	0.039
fz recommended for 45 HRC (approximately)	0.020	0.022	0.026
fz recommended for 55 HRC (approximately)	0.016	0.020	0.022
fz recommended for general purpose	0.026	0.028	0.031

NOTE: Use two effective teeth for feed calculations.
For materials above 45 HRC, we recommend to adjust the Ae max to 55% of cutting diameter.
Steel shanks for roughing operations are recommended.

Z-Axis Plunge Mill

Primary Application

Specifically engineered to eliminate vibration and improve metal removal rates in roughing applications. Ideally suited for rough slotting applications in aerospace, general engineering, die and mold, and power generation.

Features and Benefits

Platform Features

- Nine coolant nozzle sizes enable customized flow by machine tool.
- Unique design is unmatched for chip evacuation.
- Improved performance at a reduced cost per cutting edge.
- Positive geometry lowers cutting force and reduces power requirements, enabling higher feed rates.
- Chip control when slotting.
- Fast and easy insert indexing.

Chip gash serrations
— Improved chip flow.

Linear movement clearance
— Clearance allowed for
.04 IPT ($f_z=1\text{mm}$) when
plunging or face milling.

Dropped cutting edge
— Improved chip flow.

Coolant nozzles
— Precise coolant delivery
to all pockets.

- Most stable cutting due to force directions.
- Excellent for long reach applications.
- Extended tool life.
- Suitable for a wide variety of workpiece materials.
- Up to .433" stepover.
- Unique coolant delivery.
- Chip control when slotting.

Coolant Nozzle Key

order number	catalog number	drive size
1993552	THW2M	2 MM

NOTE: Check the Spare Parts table for the coolant hole size that is incorporated in the cutters. If you need an alternative, there are eight other variants to choose from to increase or decrease the pressure. Example: MS2191C12 is a .047" (1,20mm) hole. All coolant nozzles are interchangeable with the original that is supplied with the cutter, which gives flexibility with coolant flow.

- Most stable cutting due to force directions.
- Excellent for long reach applications.
- Extended tool life.
- Suitable for a wide variety of workpiece materials.
- Up to .433" stepover.
- Unique coolant delivery.
- Chip control when slotting.

.S..HPZ	—	—	—	—	—	—	—	—	—	—	—	—	.004	.010	.016	.S..HPZ

NOTE: Use "Light Machining" values as starting feed rate.
For plunging in Z-Axis, use the 50-100% values (no chip thinning).

Copy Mills

■ Z-Axis

Best Machining Practices

When finishing a workpiece, you sometimes have to use a Z-axis solution versus a conventional end mill solution to get the best results.

When the length-to-diameter ratio protrudes farther than 3:1, you will need to use a Z-axis solution. This is when the end mill starts to vibrate and the surface finish and noise are unacceptable.

When vibration occurs, the feed rates are compromised, which normally slows down the production of the workpiece.

Programming

At this point, there is very little software for this type of application on the market. We suggest that a simple macro is created for this type of application, which can be recalled and the "X" and "Y" movement changed.

The process can be repeated, so the cutter can be removed from the workpiece in the rapid (G00) movement. Tool life will be improved by not allowing the insert to rub on the retract path.

Slotting:

There are several differing ways to machine a slot in a component using the Z-axis cutter solution.

Figure 1

This shows the typical way of machining a slot. The movements are feeding down and straight back up (Z+) in the same axis and will have a negative impact on the insert radii (cutting edge) that could lead to premature failure of the nose radii. When looking at the component, it will show the rapid travel in the Z+ direction. This will highlight the spiral of the insert/cutter operating at a high feed. It looks similar to an oil groove spiraling upwards.

Figure 2

Using a cutter that is smaller than the slot width allows the insert/cutter to be removed from the material when (G00) rapid motion is retracting from the component. Because this type of cutter can be used across various types of machines, assume a 2.00" (50mm) diameter cutter is being used to machine a slot of 2.50" (63mm) wide on a vertical 3-axis machine.

Figure 3

Align the cutter with the center of the slot on the component and define the stepover that's required. Move the Y-axis into a position for the first cut, take the first pass to a depth in the Z-axis, and when it reaches the bottom of the slot, program a 2-axis move to retract the cutting edge for the workpiece.

The 2-axis move will move the Z-axis in a positive direction at 45° (.010") away from the component, and the Y-axis will move away from the workpiece by the same amount at the same angle. Now the cutter can be retracted from the component, and the insert will not rub on the retract move.

Move the cutter to the left of the slot to define the new position and make the cut. When reaching the base, a 3-axis move will need to be made. Again, the Z-axis will be in a positive direction at 45° (.010"), and the corresponding Y-axis will move away the same respective amount from the wall.

The insert/cutter has now moved away from the workpiece, and the rapid Z+ can take place. Repeat the process on the other side of the slot, remembering the X-axis move needs to be moving the other way.

NOTE: When starting the process, it's better to start at the center of the slot. After the slot has been defined, you no longer need to put the cutter on the center path. Passes from both sides create the slot width and enable clearance for the subsequent moves, so the insert/cutter can be moved away from the side walls of the material.

(continued)

■ **Z-Axis (continued)**

Linear Plunge Milling

Entering the cutter along a parallel axis, the radial width of cut needs to be defined because the cutter might need to move away from the workpiece material.

If the radial width of cut takes more than 60% of the cutter diameter, it is more difficult to remove the insert/cutter because the machine program wants to move the cutter upwards to (G00) Z+. When taking more than 60% of the cutter diameter, the material is enveloping the cutter and is difficult to remove because a cusp has been created.

It is suggested to make the radial width of cut 50% of the cutter diameter to allow the insert/cutter to be removed without any problems.

External Profiling

This artwork represents the typical application for this type of process. Move into the cut and follow the external profile of the workpiece. When moving the cutter back to the start position, it's always advisable to move the insert from contacting the workpiece. This should be done with a 2- or 3-axis move (use .010") at 0,25mm. All axes moving in a Z+ direction will stop the rubbing in the retract move.

Internal Profiling

When taking the first pass of a depth, there is also a need to move the insert/cutter away from the material on the retract motion. Each of the passes that follow should adopt the same method on the retract move. Follow the cutter path until the component has been finished.

Machining Around a Radii

This artwork shows the cutter taking a larger radial width of cut. When moving down in the Z-axis, the insert could start to take a larger radial width of cut. Typical application could be the manufacture of a turbine blade from a rectangular piece of material. Always remember that it's advisable to move the insert/cutter away from the material on the retract motion.

Screw-On Milling Cutter Adapters

The Complete Solution to Milling

Features and Benefits

- High metal removal rates.
- High runout accuracy.
- Maximum performance capability.
- Optimizing productivity with long reach and short overhang to support all types of applications.
- Cutter is kept on centre for precision and maximum performance compared to Weldon® shank system.
- Ability to extend with standard offering extensions and reducers.
- Ground face contact for rigidity and accuracy.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

KDMR™ • Multifunction Cutter

Primary Application

An extensive offering of versatile mills that can also drill.

Features and Benefits

Platform Features

- Just two grades needed for a wide variety of materials.
- Reduced shank for machining down a side wall.
- Metric and inch sizes available.
- Reduced shank diameters for access down long side walls.
- Extensive product portfolio.
- Use compressed air when drilling for improved chip evacuation.
- Full two-edge line with improved stability.
- Lower cutting resistance and long shank types are available.
- New grade provides stability and longer tool life.
- Good chip evacuation, even when slant milling and drilling.

- 1 Vertical Milling/Plunging
- 2 Helical Milling
- 3 Ramping and Helical Milling
- 4 Pocketing
- 5 Shouldering/Profiling
- 6 Drilling
- 7 Slotting
- 8 Ramping

- Low cutting forces.
- Reduced shank diameters for access down long side walls.
- Excellent chip evacuation, even machining on an angle.
- When drilling use (1) as the effective number of teeth (ZU).
- Milling to the maximum axial depth of (Ap2), we have (2) effective teeth.

■ Drilled Hole Bottom Shape

drilled hole bottom shape						
cutting diameter	$\phi .630''$	$\phi .787''$	$\phi 1.000''$	$\phi 1.250''$	$\phi 1.500''$	$\phi 1.984''$
A (inch)	.020"	.027"	.034"	.045"	.061"	.065"

■ Drilling

- Calculate the drilling feeds based on (1) effective tooth.
- Use compressed air during drilling routine.
- When drilling sticky materials, use the peck drill routine.
- For stainless steel machining, use coolant.

drilling	
cutting diameter	maximum depth (inch)
$\phi .630$.511
$\phi .787$.511
$\phi 1.000$.866
$\phi 1.250$	1.000
$\phi 1.500$	1.000
$\phi 1.984$	1.000

■ Recommended Cutting Data by Operation and Workpiece Material

workpiece material	feed rates (in/tooth)		grade
	drilling	profile/slotting	
steel	.003~.005	.002~.010	KC720M
stainless steel	.003~.006	.002~.006	KC720M
cast iron	.002~.008	.002~.010	KC505M

■ Ramping

- Ramping angle not to exceed 8°.
- Ramping axial depth of cut not to exceed 50% of the cutter diameter.
- When machining, use compressed air for chip evacuation.

KM4X™

**The Latest Innovation in Spindle Interface Technology!
Dramatically increase your metal removal rates when
machining high-temperature alloys!**

Features and Benefits

- Run jobs at significantly faster feeds and speeds than is achievable with other spindle interfaces.
- Unique use of clamping force and interference level increases clamping capability 2–3 times.
- You experience lower cost of ownership, increased throughput, and superior results.

Experience the advantages at your Authorized Kennametal Distributor or at www.kennametal.com.

www.kennametal.com

 **KENNAMETAL®**

KIPR™ and KSSR™ • Ceramic Milling Cutters

Primary Application

The Kennametal ceramic milling platform has been specifically engineered to machine high-temperature alloys, PH series, stainless steel, and hardened materials. With excellent productivity through the massive reduction of machining time, Kennametal ceramics can run more than 10 times faster than comparable carbide grades.

Features and Benefits

Unbeatable Productivity

- Engineering to provide outstanding metal removal rates and productivity in nickel-based and/or cobalt-based alloys, stellites, stainless steel, and PH series through HSM.
- High axial and radial runout accuracy.
- Improved insert clearance and thickness tolerance to increase overall performance.
- New clamping system design provides higher spare part tool life and reliability and higher RPM.

Usability and Offering

- Three grades and three insert sizes available to cover a wide range of applications.
- Wide diameter range with shell mills, end mills, and Screw-On cutters, from diameter .625".
- High clearance on the cutters for superior ramping capacities.
- Through-coolant option in all the cutters. Only for air use.

- For machining high-temp alloys, PH stainless, stainless steels, and hardened materials.
- Excellent productivity through massive reduction of machining time.
- Face milling, pocketing, and ramping capabilities.
- Through-body coolant delivery for internal air supply only.

NOTE: A — Use these tools with the appropriate equipment/machines. Machines have to be covered for safety reasons: Hot flowing chips and loud noise are involved, which is common during the milling process.

- B — Use only air flow as coolant method.
- C — Higher RPMs are involved; use balanced toolholder for higher tool life and safer operation.
- D — Consider increasing the fz in hard machining when smaller ap are applied.

NOTE: Use "Light Machining" values as starting feed rate.

Copy Mills

- First choice for face milling high-temp alloys and hard or hardened materials up to 60 HRC.
- Excellent productivity through massive reduction of machining time.

NOTE: A — Use these tools with the appropriate equipment/machines. Machines have to be covered for safety reasons: Hot flowing chips and loud noise are involved, which is common during the milling process.

- B — Use only air flow as coolant method.
- C — Higher RPMs are involved; use balanced toolholder for higher tool life and safer operation.
- D — Consider increasing the fz in hard machining when smaller ap are applied.

Carbide Recycling

Help preserve and protect our planet!

It's easy for your company to be environmentally conscious with the Kennametal Carbide Recycling Program.

By sending us your used carbide tools, you help preserve and protect the environment and ensure that these products are recycled responsibly. Kennametal accepts any coated or non-coated carbide items, including inserts, drills, reamers, and taps.

By using the Kennametal Carbide Recycling Program, you will receive:

- A partner who cares about a sustainable environment.
- Easy-to-use web portal to value your used carbide.
- Access to our popular Green Box™ options for carbide collection.
- Systematic and efficient disposal of carbide materials.
- Improved profitability.

Program is not currently available in all geographical areas.
 For more information, please visit www.kennametal.com/carbiderecycling.

The Following Are a Few Thread Milling Methods (Work Directions)

NOTE: Climb milling results in lower cutting forces, better chip development, higher thread surface quality, and longer insert life. Therefore, it should be used whenever possible. However, in the case of some hardened materials, or when milling certain difficult-to-machine exotic materials, conventional milling may be preferred.

■ Methods of External Thread Milling

■ Methods of Internal Thread Milling

Thread Mills

- For internal and external threading on most types workpiece materials.
- One tool is used for both right- and left-hand threads.
- All cutters have through-coolant capability.
- Utilizes inserts with various profiles and pitches.

malleable iron	250 - 400	.001 - .003

NOTE:

- All thread milling inserts are full profile or cresting type. Inserts are designed to mill full thread depth in one revolution or pass.
- When machining difficult materials, two passes may be desired. A 60% thread depth on the first pass and a 40% thread depth on the second pass is recommended.
- Thread relief grooves in blind holes are not necessary.
- Thread milling large parts requires considerably less horsepower compared to other threading methods.
- Thread milling produces short chips compared to stringy chips of other threading methods.
- One holder is suitable for many different thread pitches.
- PVD-coated inserts provide maximum tool life for a wide variety of materials.

Thread Mills

Understanding Thread Milling

In order to perform a thread milling operation, a milling machine with 3-axis control, capable of helical interpolation, is required. Helical interpolation is a CNC function producing tool movement along a helical path. This helical travel combines circular movement in one plane with a simultaneous linear motion in a plane perpendicular to the first. For example, the path from point A to point B (Figure A) on the envelope of the cylinder combines a circular movement in the X and Y plane with a linear movement in the Z direction.

Figure A

α — helix angle
D — external diameter
P — pitch

Figure B

On most CNC systems, this function can be executed in two different ways:

1. G02: helical interpolation in a clockwise direction.
2. G03: helical interpolation in a counterclockwise direction.

The thread milling operation (Figure B) consists of circular rotation of the tool about its own axis together with an orbiting motion along the bore or workpiece circumference.

During one such orbit, the tool will move vertically one pitch length. These movements, combined with the insert geometry, create the required thread form.

There are two acceptable ways of approaching the workpiece with the tool to initiate production of the thread:

1. Along a tangential arc.
2. Along a tangential straight line.

NOTE: Climb milling is preferred.

Tangential Approach (Arc)

With this method, the tool enters and exits the workpiece smoothly. No marks are left on the workpiece, and there is no vibration, even with harder materials.

Although it requires slightly more complex programming, this is the method recommended for machining the highest quality threads.

internal left-hand thread

1-2:	rapid approach
2-3:	tool entry along tangential arc with simultaneous feed along Z-axis
3-4:	helical movement during one full orbit (360°)
4-5:	tool exit along tangential arc with continuing feed along the Z-axis
5-6:	rapid return

external thread

Tangential Approach (Line)

This method is very simple and has all of the advantages of the tangential arc method. However, it is applicable only to external threads.

1-2:	radial entry with simultaneous feed along the Z-axis
2-3:	helical movement during one full orbit (360°)
3-4:	radial exit

■ Preparing for the Thread Milling Operation

This is the simplest method. There are two characteristics worth noting about the radial approach:

- A small vertical mark may be left at the entry (and exit) point. This is of no significance to the thread itself.
- When using this method with very hard materials, there may be a tendency for the tool to vibrate as it approaches the full cutting depth.

1-2:	radial entry
2-3:	helical movement during one full orbit (360°)
3-4:	radial exit

NOTE: Radial feed during entry to the full profile depth should be only 1/3 of the subsequent circular feed!

■ Calculation of Feed Rates at the Cutting Edge

The first step is to calculate the tool feed rate at the cutting edge.

$$F_1 = f_z \times z \times n$$

- F_1 = tool feed rate at the cutting edge (in/min)
 f_z = inch per tooth (feed rate)
 Z = number of effective inserts in cutter
 n = rotational speed (spindle RPM)

The rotational speed (RPM) is calculated by the following formula:

$$RPM = \frac{12 \times SFM}{\pi \times d_1}$$

- SFM = cutting speed, surface feet per minute
 d_1 = cutter diameter, over insert
 $\pi = 3.1416$

■ Calculation of Program Feed Rate

On most CNC machines, the feed rate required for programming is at the centerline of the tool. When dealing with linear tool movement, the feed rate at the cutting edge and the centerline are identical. However, with circular tool movement, this is not the case. The following equations define the relationship between feed rates at the cutting edge and at the tool centerline.

$$P_f = F_1 + \frac{(F_1 \times d_1)}{D}$$

- P_f = program feed rate (in/min)
 D = major diameter (external thread)
 D = minor diameter (internal thread)
 d_1 = cutting diameter, over insert

■ Step-by-Step Thread Milling Example

thread: internal right hand 11/4 x 16 UN-2B-RH(21)

material: AISI 4140 (300 HB)

thread diameters: D (minimum bore dia.) = 1.182

Do (nominal dia.) = 1.25"

thread length: .50"

For best thread quality, the cutter with the largest d_1 (cutter diameter) possible should be used. This cutter diameter can be found in the table on page S13 as a function of pitch and minimum bore diameter D. The result for the above example is that any cutter diameter 1.02 inch or smaller can be utilized.

A cutter with a smaller d_1 will perform the thread milling operation in less time. The smaller d_1 may result in less tool rigidity, so it should be used with caution on very tough materials.

Find the appropriate normal-length shank cutter diameter on pages S9–S10.

Use the minimum bore diameter table below for reference.

pitch (TPI)	24	20	16	12
pitch (mm)	1,0	1,25	1,5	2,0
cutter dia. d_1	minimum bore diameter D			
.67	.748	.772	.787	.827
.75	.827	.850	.866	.906
.79	.866	.890	.906	.945

Figure B: cutter selected: K079TMIRW075STN16N
outer dimensions: $d_1 = .79$, R_t (radius of tool) = $d_1 \div 2 = .395$

■ Choosing Insert Size

The insert IC is defined by the selected cutter (STN16).

Use the appropriate insert table on pages S11–S12.

insert size IC	a in (mm)	pitch (TPI)	internal thread	b thread length (in)	number of teeth	grade		external thread	b thread length (in)	number of teeth	grade		cutter type
			catalog number			KC610M	KC620M	catalog number			KC610M	KC620M

insert selected: STN16 16UN-I

■ stock standard

□ non-stock standard

Step-by-Step Thread Milling Example

Calculate the feed rates:

First, find the RPM.

$$\text{RPM} = \frac{12 \times \text{SFM}}{\pi \times d_1} = \frac{12 \times 500}{3.14 \times .79} = 2418 \text{ RPM}$$

Next, calculate the feed rate at the insert cutting edge (F₁):

(using the chosen feed per tooth of .004.)

$$F_1 = \text{IPT} \times n_t \times \text{RPM} = .004 \times 1 \times 2418 = 9.67 \text{ in/min}$$

Finally, calculate the feed rate at the cutter centerline (F₂):

$$F_2 = \frac{F_1 \times (D - d_1)}{D} = \frac{9.67 \times (1.182 - .79)}{1.182} = 3.207 \text{ in/min}$$

Select the thread milling method.

Selected method — climb milling (preferred) refer to page S8.

Calculate the radius of the tangential arc R_e:

$$R_e = \frac{(R_i - C_L)^2 + R_o^2}{2R_o} = \frac{(.591 - .02)^2 + .625^2}{2 \times .625}$$

$$R_e = .573333 \text{ in.}$$

Calculate the angle (β):

$$\beta = 90^\circ + \arcsin \frac{R_o - R_e}{R_e}$$

$$\beta = 90^\circ + \arcsin \frac{.625 - .573333}{.573333}$$

$$\beta = 90^\circ + 5.17^\circ = 95.17^\circ = 95^\circ 10'$$

Calculate the movement along the Z-axis during the entry approach from point A to point B (Zα).
(NOTE: P = pitch)

$$Z\alpha = P \text{ (in)} \times \frac{\alpha^\circ}{360^\circ} = .0625 \times \frac{.0156}{4} = .0156 \text{ in, because } \alpha = 90^\circ$$

Calculate the X and Y values at the start of the entry approach.

$$X = 0Y = -R_i + C_L = -.591 + .02 = -.571 \text{ in}$$

Define Z-axis location at the start of the entry approach.
(NOTE: L = length of thread)

$$Z = -(L + Z\alpha) = -(.50 + .0156) = -.5156 \text{ in}$$

Define the starting point.

$$X_a = 0$$

$$Y_a = 0$$

$$R_i = \frac{D}{2}$$

D = minor diameter

$$R_o = \frac{D_o}{2}$$

D_o = nominal diameter

$$\alpha = 90^\circ$$

■ Step-by-Step Thread Milling Example

Appendix A

Derivation of Formulas for Internal Thread Milling

R_e , β , and X can be found by a geometric analysis of the entry path. This entry path is defined by the tool traveling along a circular path, with a radius of R_e about the point C.

derivation of $R_e = \frac{(R_i - C_L)^2 + R_o^2}{2R_o}$

Triangle OAC enables us to simply solve for R_e . Note that OAC is a right-angle triangle, and that:
 $OA = R_i - C_L$
 $CA = R_e$
 $OC = R_o - R_e$
 Pythagoras' law states: $OA^2 + OC^2 = AC^2$
 Replacing actual values, we get:

$(R_i - C_L)^2 + (R_o - R_e)^2 = R_e^2$

Simplifying, we get:

$R_e = \frac{(R_i - C_L)^2 + R_o^2}{2R_o}$

Appendix B

Derivation of Formulas for External Thread Milling

R_e , β , and X can be found by a geometric analysis of the entry path. This entry path is defined by the tool traveling along a circular path, with a radius of R_e about the point C.

derivation of $R_e = \frac{(R_o - C_L)^2 + R_i^2}{2R_i}$

Triangle OAC enables us to simply solve for R_e . Note that OAC is a right-angle triangle, and that:
 $OA = R_o + C_L$
 $CA = R_e$
 $OC = R_e - R_i$
 Pythagoras' law states: $OA^2 + OC^2 = AC^2$
 Replacing actual values, we get:

$(R_o + C_L)^2 + (R_e - R_i)^2 = R_e^2$

Simplifying, we get:

$R_e = \frac{(R_o - C_L)^2 + R_i^2}{2R_i}$

Find the angle β .

$\beta = 90^\circ + \sigma$

$\sin \sigma = \frac{OC}{CA} = \frac{(R_o - R_e)}{R_e}$

$\sigma = \arcsin \left(\frac{R_o - R_e}{R_e} \right)$

Therefore, $\beta = 90^\circ + \arcsin \left(\frac{R_o - R_e}{R_e} \right)$

Find the angle β .

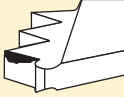

β can be easily found using the same triangle:

$\sin \beta = \frac{AO}{AC} = \frac{(R_o + C_L)}{R_e}$

$\beta = \arcsin \left(\frac{R_o + C_L}{R_e} \right)$

■ Thread Mill Troubleshooting

problem	possible cause	solution
excessive insert flank wear 	• Cutting speed too high.	• Reduce cutting speed.
	• Chip is too thin.	• Increase feed rate.
	• Insufficient coolant.	• Increase coolant quantity/pressure.
chipping of cutting edge 	• Chip is too thick.	• Reduce feed rate. • Use the tangential arc method of entrance. • Increase rpm.
	• Vibration.	• Check rigidity.
material build-up on the cutting edge 	• Cutting speed too slow.	• Increase cutting speed.
	• Chip thickness too small.	• Increase feed rate.
chatter/vibration	• Feed rate is too high.	• Reduce the feed.
	• Profile is too deep (coarse pitch threads).	• Execute two passes, each with increased cutting depth. • Execute two passes, each cutting only half the thread length.
	• Thread length is too long.	• Execute two passes, each cutting only half of the thread length.
insufficient thread accuracy	• Tool deflection.	• Reduce feed rate. • Execute a zero cut.
